

CONTENTS

First stages in the x-ray analysis of proteins	1
Photoconductivity	15
Neutrino physics	61
Electron beam spectroscopy	77
Collective vibrations in nuclei	113
The equation of state of dense systems	169
Quantum theory of many-body systems	201
Thermomagnetic effects in semiconductors and semimetals	249
The direct observation of imperfections in crystals	291
Some effects of point defects on the vibrations of crystal lattices	331
X-ray microscopy	381
Astrophysical neutrinos	411
Solid-state polymerization induced by radiation	463
