

CONTENTS

PREFACE	v
1 GRAPHS, EXPERIMENTAL ERRORS AND UNITS	1
2 LABORATORY APPARATUS	23
Part A. Optical	23
Light sources; filters; linear polarizers; anti-reflexion films; microscopes; spectrometers; interferometers; refractometers; polarimeters; photometers; fluorimeters; colorimeters	
Part B. Electrical	62
Resistors (tolerances and preferred values); insulators; inductors; galvanometers; instrument tolerances; valve voltmeters; cathode-ray oscillographs; chemical sources of e.m.f.; transformers; rectifiers; filters; voltage stabilizers; oscillators; counters	
Part C. General	88
Balances and weights; high-vacuum equipment; temperature measuring instruments (radiometers, thermopiles, radiation pyrometers); viscometers; transducers; level recorders; waveform analysers	
3 ELASTICITY	113
Experiment	
3.1. To determine Young's modulus by the bending of a beam by an applied couple	119
3.2. To determine Young's modulus by a dynamic method	129
3.3. To determine Young's modulus and Poisson's ratio by the bending of a beam (Cornu's method)	131
3.4. To determine the modulus of rigidity (<i>a</i>) statically, (<i>b</i>) dynamically	137
3.5. To find the modulus of rigidity using a flat helical tension spring	141
4 VISCOSITY	147
Experiment	
4.1. To determine the viscosity of a liquid by (<i>a</i>) capillary flow, (<i>b</i>) U-tube, (<i>c</i>) falling sphere, (<i>d</i>) rotating cylinder	159
4.2. To determine the viscosity of air (Rankine's method)	171

5	SURFACE TENSION	177
	Experiment	
5.1.	To determine surface tension by capillary methods: (a) Sugden, (b) Ferguson	179
5.2.	To determine the variation of surface tension with temperature (Jaeger's method)	185
5.3.	To investigate the drop-weight method for measuring (a) surface tension, (b) interfacial tension	189
5.4.	To determine surface tension and interfacial tension by the detached ring method	195
5.5.	To find the angle of contact by Quincke's method	197
6	THE ACCELERATION OR INTENSITY DUE TO GRAVITY	203
	Experiment	
6.1.	To examine the effect of (a) finite amplitude of swing, (b) yield of the support on the periodic time of a simple pendulum	205
6.2.	To measure the acceleration due to gravity by (a) the compound pendulum, (b) Kater's pendulum	211
7	LOW PRESSURE	217
	Experiment	
7.1.	To calibrate a Pirani gauge	217
7.2.	To investigate pumping speed: (a) constant-pressure method, (b) constant-volume method	225
8	THERMOMETRY, CALORIMETRY AND THERMAL EXPANSION	231
	Experiment	
8.1.	To determine linear coefficient of expansion by an interferometric method	241
8.2.	To determine the ratio of the specific heats of a gas (Clément and Désormes)	243
8.3.	To determine specific heat (Joly steam calorimeter)	247
8.4.	To determine the specific heat of a metal using a vacuum calorimeter	249
8.5.	To determine the latent heat of vaporization of a liquid	253
9	TRANSFER OF HEAT ENERGY	259
	Experiment	
9.1.	To determine the thermal conductivity of a bad conductor in the form of a disc	261
9.2.	To determine the thermal conductivity of a material by Forbe's method	265
9.3.	To determine the ratio of the thermal and electrical conductivities of a metal (Jaeger and Diesselhorst)	269
9.4.	To investigate the laws of cooling (a) by natural convection, (b) by forced convection	271
9.5.	To determine Stefan's constant	275

9.6.	To calibrate a Féry radiation pyrometer and a disappearing filament pyrometer	279
9.7.	To investigate the behaviour of a heated filament in an evacuated vessel	281
10	ACOUSTICS	285
	Experiment	
10.1.	To determine frequency by the observation of a Lissajous figure	289
10.2.	To determine the velocity of sound in free air by observation of phase change	291
10.3.	To determine the velocity of sound in a gas using a resonator	293
10.4.	To determine the velocity of sound in a tube (modified Kundt's tube)	297
10.5.	To determine the velocity of sound in a liquid using ultrasonic waves	299
10.6.	To calibrate a pressure microphone using a Rayleigh disc	301
10.7.	To calibrate a crystal microphone by using a calibrated moving-coil microphone	305
11	GEOMETRICAL OPTICS	309
	Experiment	
11.1.	To determine the cardinal points of a thick lens or lens system and to find the equivalent focal length	323
11.2.	To investigate the variation of equivalent focal length with distance of separation for a system of two thin converging lenses	331
11.3.	To examine the aberrations of a converging lens	335
11.4.	To verify the formula for the astigmatic difference of oblique pencils on a concave mirror	343
12	DIFFRACTION	349
	Experiment	
12.1.	To determine wavelength by measurements on Fresnel diffraction fringes at a straight edge	355
12.2.	To determine wavelength by measurements on Fresnel diffraction fringes at a single slit	357
12.3.	To determine wavelength by measurements on Fresnel diffraction fringes at a narrow obstacle	361
12.4.	To determine wavelength by measurements on Fraunhofer diffraction fringes at a single slit	363
12.5.	To determine the width of a narrow slit by observation on Fraunhofer diffraction fringes at a double slit	365
12.6.	To determine the diameter of small bodies by a diffraction method (Fraunhofer diffraction)	369
12.7.	To determine the resolving power of a telescope	371
12.8.	To determine (a) wavelength using a plane diffraction grating and (b) to find the resolving power of a grating	373
12.9.	To determine (a) the resolving power of a prism spectrometer and (b) the dispersion of a prism spectrograph	379

13	INTERFERENCE	387
	Experiment	
13.1.	To determine wavelength by Fresnel's biprism (division of wave front)	389
13.2.	To determine wavelength by Newton's rings (division of amplitude)	395
13.3.	To calibrate a spectrometer using a channelled spectrum	399
13.4.	To determine wavelength by the Fabry-Perot interferometer	403
13.5.	Experiments with a Michelson interferometer	407
13.6.	To verify Gladstone and Dale's Law and to determine the refractive index of a gas at s.t.p. using a Rayleigh interferometer	415
14	POLARIZATION	423
	Experiment	
14.1.	To analyse a beam of elliptically polarized light	425
14.2.	To measure small phase differences produced by a doubly refracting material	429
14.3.	To calibrate a Babinet and a Soleil compensator	433
14.4.	(a) To determine the refractive index of a dielectric material by the application of Brewster's law, (b) to verify Fresnel's reflexion equations	439
14.5.	To determine the optical constants of a metal	445
14.6.	To investigate the variation of the Verdet constant of a liquid with wavelength (Faraday effect)	451
15	BALLISTIC GALVANOMETERS AND ELECTROMETERS	459
	Experiment	
15.1.	To determine the logarithmic decrement and the ballistic constant of a moving-coil ballistic galvanometer	463
15.2.	To measure the magnetic flux density using a Grassot flux-meter	467
15.3.	To calibrate (a) a quadrant electrometer, (b) a Lindemann electrometer	471
16	MEASUREMENT OF CAPACITANCE AND MUTUAL INDUCTANCE	477
	Experiment	
16.1.	To find the capacitance of a capacitor by measuring the charge in it	477
16.2.	To find the capacitance of a capacitor by charging it through a resistor of large resistance	479
16.3.	To determine capacitance by the method of mixtures	483
16.4.	To determine mutual inductance by a ballistic galvanometer	485
16.5.	To compare mutual inductances (Maxwell's method)	489
16.6.	To determine mutual inductance in terms of resistance and capacitance (Astbury and Ford's method)	491

17	WHEATSTONE NETWORK	495
	Experiment	
	17.1. To compare the resistances of two resistors	503
	17.2. To examine the accuracy attainable with a bridge wire	505
	17.3. To compare resistances of small value	509
	17.4. To measure self-inductance in terms of capacitance and resistance (Maxwell bridge)	515
	17.5. To measure self-inductance in terms of capacitance, resistance and frequency (Hay bridge)	517
	17.6. To compare the self-inductances of two self-inductors (Maxwell's bridge)	519
	17.7. To measure frequency using a resonance bridge	521
	17.8. To determine the capacitance and leakage resistance of a capacitor	523
	17.9. To measure admittance by the twin-T method	525
18	POTENTIOMETERS	533
	Experiment	
	18.1. To compare resistances with a potentiometer	533
	18.2. To determine the temperature coefficient of resistance of a material	535
	18.3. To measure small potential differences (thermal e.m.f.)	537
	18.4. To compare the potential difference vectors in different parts of an a.c. circuit (Gall potentiometer)	539
19	ELECTRONICS	545
	Experiment	
	19.1. To examine the characteristics and behaviour of thermionic valves: (a) diode, (b) triode, (c) tetrode and pentode, (d) thyatron	545
	19.2. To find the critical potentials of mercury	553
	19.3. To determine the charge of an electron (Millikan's method)	555
	19.4. To investigate the absorption by metal of radiation of short wavelength	561
	19.5. To show the relationship between current and frequency in a resonant circuit	563
	19.6. Experiments to illustrate the use of certain circuits containing thermionic valves, (a) the response of an a.c. amplifier, (b) the measurement of a small current by a d.c. amplifier, (c) the conditions controlling the oscillation of an oscillator	567
	19.7. To determine the current gain of a magnetic amplifier	575
	19.8. To determine the static characteristics of a transistor	579
20	MAGNETISM	585
	Experiment	
	20.1. To determine the susceptibility of a paramagnetic or diamagnetic material by (a) Gouy method, (b) Curie Chénéveau balance	587

20.2.	To determine the specific charge (e/m)	597
20.3.	To show the relationship between magnetic flux density and magnetizing force in a ferro-magnetic material	601
APPENDIX		607
INDEX		611

PLATES

Figures 12.4, 12.5, 12.6, 12.12, 12.13, 12.14, 13.2, 13.3, 13.6, 13.7, 13.8, 13.18 and 13.19 are inserted as plates (1-6) in their respective chapters. All other figures are in the text.
