Author's Preface	<i>page</i> vii
Introduction by Professor A. M. Taylor	ix
1. The human senses and physical measurements	1
2. Measurements dependent upon visual acuity	5
2.1. Introduction	5
2.2. The human eye	5
2.3. The resolving power of the eye	9
2.4. Variation of human visual acuity with contrast of test object and the adaptation luminance	11
2.5. Variation of visual acuity with pupil diameter	12
2.6. Resolving power of the human eye for point objects	13
2.7. The effect of colour of light on visual acuity	14
2.8. Dynamic visual acuity	15
2.9. Vernier acuity	15
2.10. Stereoscopic acuity	17
2.11. The limit of object perception of the human eye	17
2.12. The frequency response of the eye	18
2.13. Vision of detail through microscopes	19
2.14. Vision of detail through telescopes	20
2.15. The use of sighting instruments such as theodolites and levels	24
2.16. Reading vernier scales	24
2.17. The use of visual refractometers and their accuracy	26
2.18. The use of visual rangefinders and their accuracy	26
2.19. The eye as an estimator of length	28
2.20. Reading instrument scales	31
3. Measurements dependent on the discrimination of luminance difference or contrast	34
3.1. Luminance difference thresholds	34
3.2. The variation of relative luminance difference thresholds with coloured light	37
3.3. Photometry	37

Contents

3.4.	The accuracy of visual photometry	page	38
3.5.	The precision of visual polarimetry*		40
3.6.	The precision of setting of a disappearing filament optical pyrometer		42
3.7.	The visual range of objects seen through telescopes		43
3.8.	The visibility of interference fringes		43
3.9.	The direct estimation of apparent brightness by the eye		45
4.	The limits of sensitivity of the eye and ear		48
4.1.	Introduction		48
4.2.	The time course of dark adaptation of the retina		48
4.3.	Viewing point sources at the threshold		49
4.4.	Viewing stars		51
4.5.	Viewing extended objects		53
4.6.	The Stiles-Crawford effect		54
4.7.	The threshold for extended white light sources		55
4.8.	The thresholds for extended coloured sources		55
4.9.	Viewing faint cathode-ray tubes and other faint objects		56
4.10.	Night blindness		57
4.11.	The comparison of the sensitivity of the eye with other detectors of radiated energy		57
5.	Colour measurement		60
5.1.	Introduction		60
5.2.	The specification and measurement of colour		60
5.3.	The sensitivity of the unaided eye to changes of colour		62
5.4.	Comparison of the eye and ear in determining the components of a mixture		62
6.	Temporal visual phenomena		64
6.1.	Introduction		64
6.2.	The reaction time of the eye to flashes of light of short duration		64
6.3.	The persistence of flashes of short duration		64
6.4.	The apparent intensity of flashes of light of very short duration		64
6.5.	The apparent intensity of flashes of light of longer duration		65
6.6.	Flicker and fusion of periodic flashes		65
6.7.	Eye movements		67
6.8.	After-images		68
	Glossary of photometric terms		73
	Index		75
