

CONTENTS

CHAPTER I. THE CHOICE OF CONSTANTS	1
CHAPTER II. EARLY MEASUREMENTS	2
2.1. Direct determination of the constants. 2.2. The electronic charge, e . 2.3. Avogadro's number, N . 2.4. The Faraday. 2.5. The specific charge of the electron, e/m . 2.6. The ratio h/e . 2.7. The Rydberg constant. 2.8. Other measurements related to the atomic constants. 2.9. The derivation of the 'best values' of the constants.	
CHAPTER III. THE VELOCITY OF LIGHT	19
3.1. Early measurements. 3.2. Post-1914 work. 3.3. The microwave interferometer method of Froome. 3.4. Bergstrand's method. 3.5. Indirect determination of c . 3.6. The value of c . 3.7. Future measurements of c .	
CHAPTER IV. RECENT PRECISE MEASUREMENTS	37
4.1. The gyromagnetic ratio of the proton. 4.2. The proton magnetic moment in nuclear magnetons. 4.3. The proton magnetic moment in Bohr magnetons. 4.4. The ratio of the electron magnetic moment and the proton magnetic moment. 4.5. The hyperfine separation in the ground state of hydrogen. 4.6. The fine structure of deuterium. 4.7. The mass of the proton.	
CHAPTER V. THE DERIVATION OF THE BEST VALUES OF THE CONSTANTS	61
APPENDIX I. COMMONLY USED SYMBOLS	68
APPENDIX II. STANDARDS OF MEASUREMENT	69
APPENDIX III. TABLE OF CONSTANTS	73
REFERENCES AND AUTHOR INDEX	75
SUBJECT INDEX	87
