

# Table of Contents

## Part I: Mechanics

1	Introduction	1
2	Statics: Study of Forces in Equilibrium	7
3	Dynamics of Translatory Motion: Study of Forces Not in Equilibrium	14
4	Work and Energy. Machines	24
5	Dynamics of Rotary Motion: Study of Torques Not in Equilibrium	30
6	Special Dynamical Considerations of Mass Points and Rigid Bodies	36

## Part II: Properties of Matter and Sound

7	Statics of Elasticity and Mechanics of Fluids	45
8	Wave Motion and Sound	55

## Part III: Heat

9	Nature of Heat and Temperature	67
10	Calorimetry and Thermal Properties of Substances	74
11	Heat Transfer and Thermodynamics	79

## Part IV: Electricity and Magnetism

12	Nature of Electricity and Electrostatics	87
13	Electric Currents (Steady)	98
14	Magnetism and the Magnetic Effects of Currents	112
15	Electromagnetic Induction, Oscillations, and Waves	127
16	Gaseous Conduction, the Electron, and the Nuclear Atom	138

## Part V: Light

17	The Nature of Light: Its Propagation and Measurement	153
18	Geometric Optics: Mirrors, Lenses, and Other Optical Instruments	161
19	Optical Phenomena: Physical Optics	171

viii TABLE OF CONTENTS

**Appendixes**

I	Glossary of Terms and Definitions	183
II	Laws and Principles	198
III	Table of Analogies Between Translatory and Rotary Motion	204
IV	Supplementary Questions and Problems	205
V	Physical Constants	225
VI	The Metric System	228
VII	Vapor Pressures of Water	229
VIII	Four-Place Logarithms	230
IX	Natural Sines and Tangents	234
X	Periodic Chart of the Elements	235
	Index	237
