About this book	(vi)	6 Discovering about heat	49
Introduction	(vii)	6.00 What happens to substances when they are heated?	49
Part A Measuring		6.10 The thermal expansion of liquids	49
1 Measurement of length, mass, time	1	6.20 The thermal expansion of solids	50
1.00 Units for measuring	1	6.30 Using expansion in everyday life	52
1.10 Some derived SI units	5	6.40 The transfer of heat	53
2 Using measurements	12	7 Discovering about sound	60
2.00 Levers	12	7.00 Making a noise	60
2.10 Pendulums	12	7.10 Making musical sounds	61
2.20 Pulleys	14	7.20 The transmission of sound	62
2.30 Air pressure	14	7.30 The speed of sound	64
3 Measuring temperature	19	7.40 Resonance	64
3.00 Simple thermometers	19	8 Discovering about magnets	67
3.10 The Celsius scale	20	8.00 Magnetic poles	67
3.20 Some different kinds of thermometer	21	8.10 Making magnets	69
3.30 Melting points	22	8.20 Magnetic fields	71
3.40 Boiling points	23	8.30 Magnetic materials	73
4 From measurements to laws	25	8.40 The Earth's magnetic field	74
4.00 Working scientifically	25	9 Discovering about electricity	79
4.10 Friction	25	9.00 Electric cells	79
4.20 Upthrust	28	9.10 Conductors and insulators	81
4.30 Floating	29	9.20 The magnetic effect of an electric current	82
		9.30 Using electromagnetism	85
Part B Discovering physics		Part C Investigating forces	
5 Discovering about light	34	10 Investigating motion and momentum	91
5.00 Rays of light	34	10.00 The mathematics of motion	91
5.10 Reflection	37	10.10 Mass and momentum	101
5.20 Refraction	42	10.20 Force	104
5.30 Colour	47	10.30 Collisions	105
		10.40 Using the principle of conservation of momentum	107

11 Investigating forces in action	109	19.40 Other relations between p.d. and current	192
11.00 Two or more forces acting together	109	19.50 Measuring temperature electrically	193
11.10 Gravitational forces	113		
11.20 Orbits	115		
11.30 Satellites	119		
12 Investigating turning forces	121		
12.00 Moments	121		
12.10 Centre of gravity	123		
12.20 Equilibrium	125		
13 Investigating force and pressure	127		
13.00 Fluid pressure	127		
13.10 Pascal's principle	130		
13.20 Units for measuring atmospheric pressure	131		
13.30 Archimedes' principle	132		
14 Investigating electromagnetic force	134		
Part D Investigating energy			
15 Work, energy and power	138	20 Atoms	196
15.00 Work	138	20.00 Elements, nuclides and isotopes	196
15.10 Energy	140	20.10 Radioactivity	198
15.20 Power	145	20.20 Detecting radioactivity	199
		20.30 Half-life	204
		20.40 Natural and artificial nuclides	206
16 Using energy	147	21 Waves	210
16.00 Types of energy	147	21.00 Features of waves	210
16.10 Conservation of energy	147	21.10 The behaviour of waves	214
16.20 Conversion of energy	147	21.20 The nature of sound	218
16.30 Conversion of other forms of energy to internal energy	151	21.30 The nature of light	222
		21.40 The electromagnetic spectrum	225
		21.50 The photoelectric effect	228
		21.60 Spectra	229
Part E Investigating matter			
Using SI prefixes and standard form	154	22 Electric charge	232
		22.00 Charged conductors	232
17 The structure of matter	155	22.10 Charge and potential	234
17.00 Molecules	155	22.20 Storing charge	236
17.10 States of matter	157	23 Electrons	240
18 Matter and heat	166	23.00 Free electrons	240
18.00 Vibrating molecules	166	23.10 Beams of free electrons	241
18.10 Evaporation and boiling	171	23.20 Evidence for the structure of the atom	248
18.20 Evaporation and cooling	172		
18.30 Expansion	173		
19 Matter and electricity	177	Part G Physics in action	
19.00 The structure of atoms	177	24 Working with lenses	250
19.10 Carriers of electricity	177	24.00 Cameras	250
19.20 Ohm's law	186	24.10 The eye	257
19.30 Resistance	188	24.20 Magnifiers	258
		24.30 Telescopes	261
		25 Working with reflectors	262
		25.00 Converging mirrors	262
		25.10 Diverging mirrors	263
		25.20 Total internal reflection	264
		26 Using electricity	269
		26.00 Heat from electricity	269
		26.10 Light from electricity	272
		26.20 Force from electricity	274
		26.30 The chemical effects of electricity	280
		27 Flight	284
		27.00 Pressure in moving fluids	284

27.10 Aerofoils	285	31 Transistors	319
27.20 Forces acting on an aeroplane in flight	286	31.00 A transistor as a switch	319
28 Engines	291	31.10 How a transistor works	321
28.00 Energy from chemical fuels	291	31.20 A transistor as an amplifier	321
28.10 Internal combustion engines	292	31.30 Using transistors	322
28.20 Gas turbines and jet engines	294	32 Radio	324
28.30 Rocket engines	295	32.00 Oscillators	324
29 Producing electricity	296	32.10 Radio transmitters	325
29.00 Electricity from mechanical energy	296	32.20 Radio wave detection	327
29.10 Electricity from chemical energy	303	33 Nuclear power	329
29.20 Electricity from other sources of energy	304	33.00 Matter into energy	329
29.30 Transformers	304	33.10 Nuclear fission	330
29.40 Distribution of electricity	306	33.20 Nuclear fusion	330
30 Using materials	309	33.30 Generating electricity from nuclear energy	331
30.00 Investigating the properties of materials	309	Part H <i>Answers and Discussion</i>	333
30.10 Electrolytic corrosion	312	Revision questions	390
30.20 Making the best use of the properties of materials	314	Tables	397
		Index	403
