Preface xix

Introduction xxiii

1
vectors and balanced forces 1

1.1 Vectors 1

1.2 Vectors Other than Displacements 3

1.3 Rectangular Components of Vectors 4

1.4 Trigonometric Methods 6

SPECIAL NOTE:
AN EXPERIMENT TO DETERMINE THE NATURE OF
LIGHT 7

1.5 Addition of Forces 9

1.6 Objects at Rest 10

1.7 Objects Constrained by Ropes and Cables 12

1.8 The First Condition for Equilibrium 14

1.9 Solution of Problems in Statics 15

Questions and Guesstimates 17

Problems 18

2
uniformly accelerated motion 22

2.1 Velocity and Speed 22

2.2 Acceleration 26

2.3	Uniformly Accelerated Motion	27	
2.4	Two Derived Equations for Uniformly Accelerated Motion	29	
2.5	A Note about Equations	32	
2.6	Galileo's Discovery	33	
2.7	Free Fall and the Acceleration Due to Gravity		34
	Questions and Guesstimates	38	
	Problems	39	

3

forces and linear motion 42

3.1	The Discovery of Physical Laws	42	
3.2	Newton's First Law of Motion	44	
3.3	Newton's Third Law of Motion	45	
3.4	Newton's Second Law of Motion	47	
3.5	Standard Units of Measurement	49	
3.6	Derived Units	50	
3.7	Use of Newton's Second Law	52	
3.8	Friction Forces	58	
3.9	Terminal Velocity	60	
	Questions and Guesstimates	60	
	Problems	61	

4

motion under the action of gravity 64

4.1	Newton's Law of Gravitation	64	
4.2	Motion on an Incline	69	
4.3	Projectile Motion	74	
	SPECIAL NOTE:		
	THE DISCOVERY OF X-RAYS	75	
	Questions and Guesstimates	79	
	Problems	79	

5

work and energy 82

5.1	Definition of Work	82	
5.2	Work Done against the Force of Gravity		85
5.3	Power	88	

5.4	Kinetic Energy	89	
5.5	Potential Energy	91	
5.6	Interconversion of Kinetic and Potential Energy		92
5.7	Conservation of Energy	95	
5.8	Machines	98	
5.9	The Black-box Machine	99	
5.10	The Simple Pulley	100	
5.11	Other Pulley Systems	101	
5.12	The Wheel and Axle	102	
	Questions and Guesstimates		103
	Problems	103	

6

momentum and the pressure of gases 107

6.1	The Concept of Momentum	107	
6.2	Newton's Second Law Restated	108	
6.3	Conservation of Momentum	110	
6.4	Elastic and Inelastic Collisions	112	
	SPECIAL NOTE: THE DISCOVERY OF RADIOACTIVITY		113
6.5	Rocket and Jet Propulsion	116	
6.6	Pressure of an Ideal Gas	117	
	Questions and Guesstimates		121
	Problems	121	

7

relativity 124

7.1	Absolute Motion Undetermined	124	
7.2	Michelson-Morley Experiment	127	
7.3	A Maximum Speed Exists	130	
7.4	Moving Clocks Run Slow	131	
7.5	Implications of Time Dilation	134	
7.6	Length Contraction	136	
7.7	Relativistic Variation of Mass	139	
7.8	Energy and Relativity	140	
	Questions and Guesstimates		142
	Problems	143	

8 angular motion and centripetal force 145

- 8.1 Angular Distance θ 145
 8.2 Angular Velocity ω 147
 8.3 Angular Acceleration α 148
 8.4 The Angular-motion Equations 149
 8.5 Centripetal Force and Centripetal Acceleration 151
 SPECIAL NOTE:
 THE DISCOVERY OF RADIUM AND POLONIUM 154
 8.6 Centrifugal Force 157
 8.7 A Common Misconception 157
 8.8 Weightlessness 158
 Questions and Guesstimates 162
 Problems 163

9 rotation of rigid bodies 165

- 9.1 Center of Gravity and Center of Mass 165
 9.2 Torque and the Second Condition for Equilibrium 167
 9.3 Rigid Objects in Equilibrium 170
 9.4 The Position of the Axis Is Arbitrary 171
 9.5 More Analogies between Linear and Rotational Motion 174
 9.6 Relation between Torque and Angular Acceleration 175
 9.7 Moments of Inertia for Various Bodies 178
 9.8 Kinetic Energy of Rotation 182
 9.9 Rotational, or Angular, Momentum 184
 Questions and Guesstimates 185
 Problems 186

10 mechanical properties of matter 191

- 10.1 The Three States of Matter 191
 10.2 Crystalline and Glassy Solids 193
 10.3 Hooke's Law 194
 10.4 Stress and Strain 195
 10.5 The Concept of Modulus 196
 10.6 Viscosity of Liquids 198
 10.7 Density and Specific Gravity (Relative Density) 201

10.8	Pressure in a Liquid	202	
10.9	Properties of Pressure in Fluids	204	
10.10	Archimedes' Principle	206	
10.11	Density Determinations	207	
10.12	The Barometer	209	
10.13	Bernoulli's Equation for Liquids in Motion		211
10.14	Torricelli's Theorem	213	
10.15	Other Applications of Bernoulli's Equation		213
	Questions and Guesstimates	214	
	Problems	215	

11

temperature, motion, and the gas law 219

11.1	Early Ideas about Heat	219	
11.2	Thermometers	221	
	SPECIAL NOTE: THE VELOCITY OF GAS MOLECULES		222
11.3	The Gas Law	225	
11.4	Molecular Basis for the Gas Law	226	
11.5	Variation of Molecular Speeds in Gases		232
11.6	Thermal Expansion	233	
	Questions and Guesstimates	236	
	Problems	237	

12

thermal properties of matter 240

12.1	Heat as a Form of Energy	240	
12.2	Units of Heat Energy	241	
12.3	Specific Heat Capacity	242	
12.4	c_v and c_p for Gases	245	
12.5	The Mechanical Equivalent of Heat	246	
12.6	Heat of Vaporization and the Boiling of Liquids		247
	SPECIAL NOTE: THE QUANTITY $c_p - c_v$ FOR AN IDEAL GAS		248
12.7	Heat of Fusion and Melting	252	
12.8	Calorimetry	253	
12.9	Transfer of Heat: Conduction	256	
12.10	Transfer of Heat: Convection	258	
12.11	Transfer of Heat: Radiation	259	
12.12	Laws of Cooling	260	
12.13	Humidity	260	
12.14	The First Law of Thermodynamics		262

12.15	The Second Law of Thermodynamics	264
	Questions and Guesstimates	266
	Problems	267
13	vibratory motion	270
13.1	Vibrating Systems	270
13.2	The Vibrating Spring	271
13.3	Simple Harmonic Motion	273
13.4	The Period of Vibration	275
13.5	Sinusoidal Vibration: Simple Harmonic Motion	277
13.6	The Simple Pendulum	279
13.7	Forced Vibrations	280
	Questions and Guesstimates	282
	Problems	282
14	wave motion	285
14.1	Importance of Wave Motion	285
14.2	Waves on a String: Transverse Waves	286
14.3	Reflection of a Wave	289
14.4	Resonance	292
14.5	Resonant Motions of a String	293
14.6	Other Transverse Waves	296
14.7	Longitudinal Waves	298
14.8	Standing Compressional Waves on a String	298
14.9	Compressional Waves on a Bar	300
	Questions and Guesstimates	302
	Problems	303
15	sound	305
15.1	Origin of Sound	305
15.2	Sound Waves in Air	306
15.3	The Speed of Sound	307
15.4	The Loudness of Sounds	308
15.5	Frequency Response of the Ear	310
15.6	Pitch and Quality of Sound	312

15.7	Interference of Sound Waves	314	
15.8	Beats	317	
15.9	Organ Pipes and Vibrating Columns		319
15.10	Musical Scales and Harmonic Combinations		321
15.11	Doppler Effect	322	
15.12	Shock Waves and Sonic Booms	324	
	Questions and Guesstimates	325	
	Problems	326	

16

	electric charges at rest: electrostatics		329
--	--	--	-----

16.1	Atoms as the Source of Charge	329	
16.2	Forces between Charges	331	
16.3	Insulators and Conductors	331	
16.4	The Electroscope	332	
16.5	Charging by Conduction and by Induction		333
16.6	The Faraday Ice-pail Experiment	335	
16.7	Coulomb's Law	336	
16.8	The Electric Field	339	
16.9	The Electric Field in Various Systems		342
16.10	Electrical Potential Energy: Potential Difference	345	
16.11	The Electron Volt Energy Unit	349	
16.12	Absolute Potentials	350	
16.13	The Charge on the Electron	352	
	Questions and Guesstimates	354	
	Problems	355	

17

	circuit elements and their behavior		358
--	-------------------------------------	--	-----

17.1	Batteries as a Source of Potential Difference		358
17.2	Resistance and Ohm's Law	362	
17.3	Drawing Circuits and Meters	365	
17.4	Resistances in Series	366	
	SPECIAL NOTE: THE ELECTRON AS OBSERVED IN FARADAY'S EXPERIMENT	368	
17.5	Resistors in Parallel	369	
17.6	Resistivity and Its Temperature Dependence		373
17.7	Capacitors (Condensers)	375	
17.8	Capacitors in Series and Parallel	377	
17.9	Dielectrics	380	

17.10	Energy Stored in a Capacitor	383
17.11	Energy Stored in an Electric Field	384
	Questions and Guesstimates	385
	Problems	386

18

direct-current circuits 390

18.1	Circuits Solvable by Using Ohm's Law	390
18.2	Kirchhoff's Rules	392
18.3	The Wheatstone Bridge	398
	SPECIAL NOTE: SUPERCONDUCTORS	399
18.4	Power and Electrical Heating	400
18.5	House Circuits	402
18.6	EMF and Terminal Potential of a Battery	403
18.7	The Potentiometer	405
18.8	Electrolysis	407
	Questions and Guesstimates	408
	Problems	409

19

magnetism 414

19.1	Plotting Magnetic Fields	414
19.2	Magnetic Fields of Currents	416
19.3	Force on a Current in a Magnetic Field	416
19.4	Extension of the Right-hand Rule	419
19.5	Forces on Moving Charges	420
	SPECIAL NOTE: CATHODE RAYS AND THE ELECTRON	421
19.6	The Determination of e/m	424
19.7	The Earth's Magnetic Field	426
19.8	Lines of Flux and Flux Density	426
19.9	Ampère's Law and the Computation of B	427
19.10	Magnetic Field of a Circular Loop	431
19.11	The Solenoid	432
19.12	The Toroid	433
19.13	Ampère's Theory of Magnets	435
19.14	The B -versus- H Curve	438
19.15	The Hysteresis Curve	441
	Questions and Guesstimates	442
	Problems	443

20 electromechanical devices 446

20.1	The Galvanometer	446	
20.2	Ammeters	448	
20.3	Voltmeters	449	
20.4	Torque on a Current Loop	450	
20.5	Induced EMFs	453	
	SPECIAL NOTE: THE ELECTRON AND THOMSON'S ATOM		254
20.6	Mutual Induction	258	
20.7	Self-inductance	259	
20.8	Motional EMFs	260	
20.9	The AC Generator	462	
20.10	The DC Generator	467	
20.11	Motors	468	
	Questions and Guesstimates	470	
	Problems	471	

21 alternating currents and reactive circuits 474

21.1	Root-mean-square Values	474	
21.2	Resistance Circuit	476	
21.3	Capacitance Circuit	477	
21.4	Inductance Circuit	479	
21.5	Combined <i>LCR</i> Circuit	480	
	SPECIAL NOTE: NATURE OF RADIATION FROM RADIOACTIVE SUBSTANCES		482
21.6	The <i>LC</i> Circuit	484	
21.7	The Transformer and Power Transmission		486
	Questions and Guesstimates	488	
	Problems	490	

22 electronics and electromagnetic waves 492

22.1	Thermionic Emission	492	
22.2	The Diode and Rectification	494	
22.3	Rectifiers	496	
22.4	The Semiconductor Diode	498	
22.5	The Triode and Amplification	501	

22.6	Generation and Reception of Radio Waves	502
22.7	Electromagnetic Waves	506
22.8	The Relation between E and B in Electromagnetic Waves	510
22.9	Magnetic Fields Induced by Changing Electric Fields	513
22.10	The Speed of Electromagnetic Waves	515
22.11	Definition of the Electrical Units	519
	Questions and Guesstimates	521
	Problems	522

23

the properties of light 524

23.1	The Concept of Light	524
23.2	The Speed of Light	527
23.3	Reflection of Light	528
23.4	Refraction of Light: Snell's Law	530
23.5	Total Internal Reflection	534
23.6	The Plane Mirror	535
23.7	The Focus of a Concave Spherical Mirror	537
23.8	The Three Reflected Rays and Image Formation	539
23.9	The Mirror Equation	541
23.10	Convex Mirrors	543
23.11	The Focal Point of a Lens	546
23.12	Ray Diagrams for Thin Lenses	549
23.13	The Thin-lens Formula	551
23.14	Combinations of Lenses	554
	Questions and Guesstimates	555
	Problems	556

24

optical devices 559

24.1	The Eye	559
24.2	The Simple Camera	562
24.3	Lenses in Close Combination: Diopter Units	564
24.4	The Magnifying Glass (Simple Magnifier)	566
24.5	The Microscope	568
24.6	The Astronomical Telescope	569
24.7	The Terrestrial Telescope	571
	SPECIAL NOTE: RADIO ASTRONOMY	572
24.8	The Prism Spectroscope	573

24.9	Polarized Light	575	
	Questions and Guesstimates		579
	Problems	580	

25

interference and diffraction 582

25.1	Diffraction	582	
25.2	Interference of Waves	583	
25.3	Young's Double-slit Experiment		586
25.4	Interference Patterns	590	
25.5	Michelson's Interferometer	592	
25.6	Interference from Thin Films	593	
25.7	The Diffraction Grating	595	
25.8	Diffraction by a Single Slit	599	
25.9	Diffraction and the Limits of Resolution		601
25.10	Diffraction of X-rays by Crystals		603
	Questions and Guesstimates	605	
	Problems	605	

26

the birth of modern physics 609

26.1	Planck's Discovery	609	
26.2	Einstein's Use of Planck's Concept		612
26.3	The Compton Effect	617	
26.4	Momentum of a Photon and Pair Production		618
26.5	Particle Waves	619	
	SPECIAL NOTE:		
	DISCOVERY OF THE NEUTRON	622	
26.6	The Uncertainty Principle	622	
26.7	Quantum Mechanics	625	
26.8	The Electron Microscope	627	
	Questions and Guesstimates	630	
	Problems	631	

27atomic structure and the emission of
light 633

27.1	The Nuclear Atom	633	
27.2	The Spectrum of Hydrogen		636

27.3	The Bohr Atom	638	
27.4	Emission of Light by Bohr's Atom		641
27.5	Energy-level Diagrams	644	
27.6	Absorption of Light by Bohr's Atom		647
27.7	De Broglie's Interpretation of Bohr's Orbits		649
27.8	Resonances of Waves in Atoms	651	
27.9	Quantum Numbers and the Pauli Exclusion Principle	654	
27.10	The Periodic Table	656	
27.11	Production of X-rays	658	
27.12	Line, Band, and Continuous Spectra		660
27.13	The Laser	663	
	Questions and Guesstimates		667
	Problems	668	
28	the atomic nucleus		670
28.1	Structure of the Nucleus	670	
28.2	Isotopes	673	
28.3	Mass Defect	675	
28.4	Radioactivity	677	
28.5	Half-life of Elements	678	
28.6	Decay Products and Radioactive Series		681
28.7	Nuclear Reactions and Transmutations		682
	SPECIAL NOTE: THE NEUTRINO	684	
28.8	Detection of Radiation	686	
28.9	Accelerators	690	
28.10	Basic Particles	693	
28.11	Nuclear Forces	697	
28.12	The Photon Field	698	
28.13	The Meson Field	700	
28.14	The Fission Reaction	702	
28.15	The Fusion Reaction	705	
28.16	Radiation Therapy	706	
28.17	Radioactive Tracers	707	
	Questions and Guesstimates		708
	Problems	709	
29	physics of the universe		712
29.1	The Primordial Fireball	712	
29.2	Galaxies and Stars	714	

29.3	Stellar Evolution	717	
	SPECIAL NOTE: TEMPERATURE OF SPACE	719	
29.4	The Expanding Universe	720	
29.5	Age Determination from Radioactivity		722
29.6	Origin of the Earth	723	
29.7	The End of the Beginning	726	
	Questions and Guesstimates	727	

APPENDIXES

1	conversion of units	729	
2	powers of ten	730	
3	periodic table of the elements		731
4	an abbreviated table of isotopes		732
5	trigonometric functions	735	
6	table of square roots	736	
7	logarithms to the base ten	737	
	answers to odd-numbered problems		739
	Index	745
