530 HALp 3rd ed.

contents

1 *MEASUREMENT* *3*

1-1 Physical Quantities, Standards, and Units 3
1-2 The International System of Units 4
1-3 The Standard of Length 6
1-4 The Standard of Mass 8
1-5 The Standard of Time 9

2 *VECTORS* *15*

2-1 Vectors and Scalars 15
2-2 Addition of Vectors, Geometrical Method 16
2-3 Resolution and Addition of Vectors, Analytic Method 17
2-4 Multiplication of Vectors 21
2-5 Vectors and the Laws of Physics 24

3 *MOTION IN ONE DIMENSION* *30*

3-1 Mechanics 30
3-2 Particle Kinematics 30
3-3 Average Velocity 31
3-4 Instantaneous Velocity 32
3-5 One-Dimensional Motion—Variable Velocity 33
3-6 Acceleration 35
3-7 One-Dimensional Motion—Variable Acceleration 37
3-8 One-Dimensional Motion—Constant Acceleration 38
3-9 Consistency of Units and Dimensions 40
3-10 Freely Falling Bodies 43
3-11 Equations of Motion in Free Fall 44

4 *MOTION IN A PLANE* *53*

4-1 Displacement, Velocity, and Acceleration 53
4-2 Motion in a Plane with Constant Acceleration 54
4-3 Projectile Motion 55
4-4 Uniform Circular Motion 59
4-5 Tangential Acceleration in Circular Motion 63
4-6 Relative Velocity and Acceleration 64

5-1 Classical Mechanics 72
5-2 Newton's First Law 73
5-3 Force 76
5-4 Mass; Newton's Second Law 77
5-5 Newton's Third Law of Motion 78
5-6 Systems of Mechanical Units 81
5-7 The Force Laws 82
5-8 Weight and Mass 83
5-9 A Static Procedure for Measuring Forces 85
5-10 Some Applications of Newton's Laws of Motion 85

5 *PARTICLE DYNAMICS–I* *72*

6-1 Introduction 97
6-2 Frictional Forces 97
6-3 The Dynamics of Uniform Circular Motion 102
6-4 Classification of Forces; Inertial Forces 106
6-5 Classical Mechanics, Relativistic Mechanics, and Quantum Mechanics 107

6 *PARTICLE DYNAMICS–I* *97*

7-1 Introduction 116
7-2 Work Done by a Constant Force 117
7-3 Work Done by a Variable Force – One-Dimensional Case 121
7-4 Work Done by a Variable Force – Two-Dimensional Case 122
7-5 Kinetic Energy and the Work-Energy Theorem 124
7-6 Significance of the Work-Energy Theorem 127
7-7 Power 127

7 *WORK AND ENERGY* *116*

8-1 Introduction 134
8-2 Conservative Forces 134
8-3 Potential Energy 137
8-4 One-Dimensional Conservative Systems 141
8-5 The Complete Solution of the Problem for One-Dimensional Forces Depending on Position Only 144
8-6 Two- and Three-Dimensional Conservative Systems 147
8-7 Nonconservative Forces 148
8-8 The Conservation of Energy 151

8 *THE CONSERVATION O ENERGY* *134*

9-1 Center of Mass 162
9-2 Motion of the Center of Mass 166
9-3 Linear Momentum of a Particle 168
9-4 Linear Momentum of a System of Particles 169
9-5 Conservation of Linear Momentum 170
9-6 Some Applications of the Momentum Principle 171
9-7 Systems of Variable Mass 174

9 *CONSERVATION OF LINEAR MOMENTUM* *162*

10-1 What is a Collision? 187
10-2 Impulse and Momentum 188
10-3 Conservation of Momentum during Collisions 189
10-4 Collisions in One Dimension 190
10-5 The "True" Measure of a Force 196
10-6 Collisions in Two and Three Dimensions 197
10-7 Cross Section 201
10-8 Reactions and Decay Processes 205

10 *COLLISIONS* *187*

11-1 Rotational Motion 215
11-2 Rotational Kinematics – the Variables 217
11-3 Rotation with Constant Angular Acceleration 218
11-4 Rotational Quantities as Vectors 220
11-5 Relation between Linear and Angular Kinematics for a Particle in Circular Motion – Scalar Form 223

11 *ROTATIONAL KINEMATICS* *215*

1-6 Relation between Linear and Angular Kinematics for a Particle in Circular Motion—Vector Form 224

12-1 Introduction 231
12-2 Torque Acting on a Particle 231
12-3 Angular Momentum of a Particle 233
12-4 Systems of Particles 236
12-5 Kinetic Energy of Rotation and Rotational Inertia 237
12-6 Rotational Dynamics of a Rigid Body 242
12-7 The Combined Translational and Rotational Motion of a Rigid Body 248

12 *ROTATIONAL DYNAMICS I* *231*

13-1 Introduction 260
13-2 The Top 260
13-3 Angular Momentum and Angular Velocity 263
13-4 Conservation of Angular Momentum 268
13-5 Some Other Aspects of the Conservation of Angular Momentum 272
13-6 Rotational Dynamics—A Review 274

13 *ROTATIONAL DYNAMICS II AND THE CONSERVATION OF ANGULAR MOMENTUM* *260*

14-1 Rigid Bodies 281
14-2 The Equilibrium of a Rigid Body 281
14-3 Center of Gravity 283
14-4 Examples of Equilibrium 285
14-5 Stable, Unstable, and Neutral Equilibrium of Rigid Bodies in a Gravitational Field 291

14 *EQUILIBRIUM OF RIGID BODIES* *281*

15-1 Oscillations 299
15-2 The Simple Harmonic Oscillator 301
15-3 Simple Harmonic Motion 303
15-4 Energy Considerations in Simple Harmonic Motion 307
15-5 Applications of Simple Harmonic Motion 310
15-6 Relation between Simple Harmonic Motion and Uniform Circular Motion 316
15-7 Combinations of Harmonic Motions 318
15-8 Two-Body Oscillations 320
15-9 Damped Harmonic Motion 322
15-10 Forced Oscillations and Resonance 323

15 *OSCILLATIONS* *299*

16-1 Historical Introduction 334
16-2 The Law of Universal Gravitation 338
16-3 The Constant of Universal Gravitation, G 339
16-4 Inertial and Gravitational Mass 342
16-5 Variations in Acceleration Due to Gravity 344
16-6 Gravitational Effect of a Spherical Distribution of Mass 347
16-7 The Motions of Planets and Satellites 350
16-8 The Gravitational Field 353
16-9 Gravitational Potential Energy 354
16-10 Potential Energy for Many-Particle Systems 357
16-11 Energy Considerations in the Motions of Planets and Satellites 359
16-12 The Earth as an Inertial Reference Frame 360
16-13 The Principle of Equivalence 360

16 *GRAVITATION* *334*

17-1 Fluids 370
17-2 Pressure and Density 371
17-3 The Variation of Pressure in a Fluid at Rest 372
17-4 Pascal's Principle and Archimedes' Principle 376
17-5 Measurement of Pressure 377

17 *FLUID STATICS* *370*

18-1 General Concepts of Fluid Flow 385
18-2 Streamlines 386
18-3 The Equation of Continuity 387
18-4 Bernoulli's Equation 389
18-5 Applications of Bernoulli's Equation and the Equation of Continuity 391
18-6 Conservation of Momentum in Fluid Mechanics 394
18-7 Fields of Flow 394

18
FLUID DYNAMICS
385

19-1 Mechanical Waves 404
19-2 Types of Waves 405
19-3 Traveling Waves 407
19-4 The Superposition Principle 410
19-5 Wave Speed 412
19-6 Power and Intensity in Wave Motion 415
19-7 Interference of Waves 417
19-8 Complex Waves 419
19-9 Standing Waves 420
19-10 Resonance 424

19
WAVES IN ELASTIC MED
404

20-1 Audible, Ultrasonic, and Infrasonic Waves 433
20-2 Propagation and Speed of Longitudinal Waves 434
20-3 Traveling Longitudinal Waves 436
20-4 Standing Longitudinal Waves 439
20-5 Vibrating Systems and Sources of Sound 440
20-6 Beats 444
20-7 The Doppler Effect 445

20
SOUND WAVES
433

21-1 Macroscopic and Microscopic Descriptions 457
21-2 Thermal Equilibrium—The Zeroth Low of Thermodynamics 458
21-3 Measuring Temperature 459
21-4 The Constant Volume Gas Thermometer 462
21-5 Ideal Gas Temperature Scale 462
21-6 The Celsius and Fahrenheit Scales 464
21-7 The International Practical Temperature Scale 465
21-8 Temperature Expansion 466

21
TEMPERATURE
457

22-1 Heat, a Form of Energy 475
22-2 Quantity of Heat and Specific Heat 477
22-3 Molar Heat Capacities of Solids 479
22-4 Heat Conduction 480
22-5 The Mechanical Equivalent of Heat 482
22-6 Heat and Work 483
22-7 The First Law of Thermodynamics 486
22-8 Some Applications of the First Law of Thermodynamics 488

22
HEAT AND THE FIRST LA
OF THERMODYNAMICS
475

23-1 Introduction 497
23-2 Ideal Gas—A Macroscopic Description 498
23-3 An Ideal Gas—Microscopic Definition 500
23-4 Kinetic Calculation of the Pressure 501
23-5 Kinetic Interpretation of Temperature 504
23-6 Intermolecular Forces 506
23-7 Specific Heats of an Ideal Gas 507
23-8 Equipartition of Energy 512

23
KINETIC THEORY OF GASES—I
497

24-1 Mean Free Path 522
24-2 Distribution of Molecular Speeds 524
24-3 Experimental Confirmation of the Maxwellian Distribution 527
24-4 Brownian Motion 529
24-5 The van der Waals Equation of State 531

24
KINETIC THEORY OF GASES—II
522

25-1 Introduction 539
25-2 Reversible and Irreversible Processes 539
25-3 The Carnot Cycle 541
25-4 The Second Law of Thermodynamics 545
25-5 The Efficiency of Engines 547
25-6 The Thermodynamic Temperature Scale 549
25-7 Entropy—Reversible Processes 550
25-8 Entropy—Irreversible Processes 553
25-9 Entropy and the Second Law 555
25-10 Entropy and Disorder 557

25
ENTROPY AND THE SECOND LAW OF THERMODYNAMICS
539

26-1 Electromagnetism—a Preview 565
26-2 Electric Charge 566
26-3 Conductors and Insulators 567
26-4 Coulomb's Law 568
26-5 Charge is Quantized 571
26-6 Charge and Matter 571
26-7 Charge is Conserved 575

26
CHARGE AND MATTER
565

27-1 The Electric Field 580
27-2 The Electric Field *E* 582
27-3 Lines of Force 582
27-4 Calculation of *E* 586
27-5 A Point Charge in An Electric Field 590
27-6 A Dipole in An Electric Field 592

27
THE ELECTRIC FIELD
580

28-1 Introduction 601
28-2 Flux 601
28-3 Flux of the Electric Field 603
28-4 Gauss's Law 606
28-5 Gauss's Law and the Coulomb's Law 606
28-6 An Insulated Conductor 607
28-7 Experimental Proof of Gauss's Law and Coulomb's Laws 608
28-8 Gauss's Law—Some Applications 610
28-9 The Nuclear Model of the Atom 614

28
GAUSS'S LAW
601

29-1 Electrical Potential 622
29-2 Potential and the Electric Field 625
29-3 Potential Due to a Point Charge 627
29-4 A Group of Point Charges 629
29-5 Potential Due to a Dipole 630
29-6 Electric Potential Energy 633
29-7 Calculation of **E** From *V* 635
29-8 An Insulated Conductor 638
29-9 The Electrostatic Generator 640

29
ELECTRIC POTENTIAL
622

30-1 Capacitance 650
30-2 Calculating Capacitance 652
30-3 Energy Storage in An Electric Field 655
30-4 Parallel-Plate Capacitor With Dielectric 657
30-5 Dielectrics—An Atomic View 660
30-6 Dielectrics and Gauss' Law 662
30-7 Three Electric Vectors 665

30
CAPACITORS AND DIELECTRICS
650

31-1 Current and Current Density 675
31-2 Resistance, Resistivity, and Conductivity 678
31-3 Ohm's Law 682
31-4 Ohm's Law—A Microscopic View 684
31-5 Energy Transfers in an Electric Circuit 687

31
CURRENT AND RESISTANCE
675

32-1 Electromotive Force 694
32-2 Calculating the Current 697
32-3 Other Single-Loop Circuits 698
32-4 Potential Differences 699
32-5 Multiloop Circuits 701
32-6 Measuring Currents and Potential Differences 704
32-7 The Potentiometer 704
32-8 RC Circuits 705

32
ELECTROMOTIVE FOR AND CIRCUITS
694

33-1 The Magnetic Field 717
33-2 The Definition of B 718
33-3 Magnetic Force on a Current 721
33-4 Torque on a Current Loop 725
33-5 The Hall Effect 728
33-6 Circulation Charges 730
33-7 Cyclotrons and Synchotrons 732
33-8 The Discovery of the Electron 736

33
THE MAGNETIC FIELD
717

34-1 Ampere's Law 746
34-2 B Near a Long Wire 750
34-3 Lines of B 752
34-4 Two Parallel Conductors 753
34-5 B For a Solenoid 755
34-6 The Biot-Savart Law 758

34
AMPERE'S LAW
746

35-1 Faraday's Experiments 770
35-2 Faraday's Law of Induction 771
35-3 Lenz's Law 772
35-4 Induction—A Quantitative Study 774
35-5 Time-Varying Magnetic Fields 778
35-6 The Betatron 781
35-7 Induction and Relative Motion 783

35
FARADAY'S LAW OF INDUCTION
770

36-1 Inductance 795
36-2 Calculation of Inductance 796
36-3 An *LR* Circuit 798
36-4 Energy and the Magnetic Field 801
36-5 Energy Density and the Magnetic Field 803
36-6 Mutual Inductance 805

36
INDUCTANCE
795

37-1 Poles and Dipoles 812
37-2 Gauss' Law for Magnetism 817
37-3 The Magnetism of the Earth 817
37-4 Paramagnetism 820
37-5 Diamagnetism 822
37-6 Ferromagnetism 825
37-7 Nuclear Magnetism 829
37-8 Three Magnetic Vectors 832

37
MAGNETIC PROPERTIES OF MATTER
812

38-1 *LC* Oscillations 841
38-2 Analogy to Simple Harmonic Motion 844
38-3 Electromagnetic Oscillations—Quantitative 845
38-4 Lumped and Distributed Elements 848
38-5 Electromagnetic Resonant Cavity 850

38
ELECTROMAGNETIC OSCILLATIONS
841

39-1 Introduction 857
39-2 RCL Elements, Considered Separately 858
39-3 The Single-Loop RCL Circuit 862
39-4 Power in Alternating Current Circuits 864

39
ALTERNATING CURR
857

39-5 Resonance in Alternating Current Circuits 866
39-6 Alternating Current Rectifiers and Filters 868
39-7 The Transformer 872

40
MAXWELL'S EQUATIONS
880

40-1 The Basic Equations of Electromagnetism 880
40-2 Induced Magnetic Fields 882
40-3 Displacement Current 884
40-4 Maxwell's Equations 885
40-5 Maxwell's Equations and Cavity Oscillations 886

41
ELECTROMAGNETIC WAVES
893

41-1 Introduction 893
41-2 The Electromagnetic Spectrum 893
41-3 Electromagnetic Waves From Space 896
41-4 Transmission Lines 897
41-5 Coaxial Cable—Fields and Currents 899
41-6 Waveguide 902
41-7 Radiation 904
41-8 Traveling Waves and Maxwell's Equations 905
41-9 The Poynting Vector 909

42
THE NATURE AND PROPAGATION OF LIGHT
918

42-1 Introduction 918
42-2 Energy and Momentum 919
42-3 The Speed of Light 922
42-4 Moving Sources and Observers 927
42-5 Doppler Effect 929

43
REFLECTION AND REFRACTION—PLANE WAVES AND PLANE SURFACES
938

43-1 Reflection and Refraction 938
43-2 Huygens' Principle 943
43-3 Huygens' Principle and the Law of Reflection 944
43-4 Huygens' Principle and the Law of Refraction 944
43-5 Total Internal Reflection 947
43-6 Fermat's Principle 949

44
REFLECTION AND REFRACTION—SPHERICAL WAVES AND SPHERICAL SURFACES
957

44-1 Geometrical Optics and Wave Optics 957
44-2 Spherical Waves—Plane Mirror 959
44-3 Spherical Waves—Spherical Mirror 963
44-4 Spherical Refracting Surface 969
44-5 Thin Lenses 973
44-6 Optical Instruments 980

45
INTERFERENCE
994

45-1 Young's Experiment 994
45-2 Coherence 998
45-3 Intensity in Young's Experiment 1002
45-4 Adding Wave Disturbances 1004
45-5 Interference in Thin Films 1006
45-6 Optical Reversibility and Phase Changes on Reflection 1010
45-7 Michelson's Interferometer 1011
45-8 Michelson's Interferometer and Light Propagation 1013

46
DIFFRACTION
1023

46-1 Introduction 1023
46-2 Single Slit 1025
46-3 Single Slit—Qualitative 1028
46-4 Single Slit—Quantitative 1030
46-5 Diffraction at a Single Aperture 1034
46-6 Double Slit Interference and Diffraction Combined 1037

47
GRATINGS AND SPECTRA
1047

47-1 Introduction 1047
47-2 Multiple Slits 1047
47-3 Diffraction Gratings 1051

47-4 Resolving Power of a Grating 1055
47-5 X-Ray Diffraction 1056
47-6 Bragg's Law 1060

48-1 Polarization 1069
48-2 Polarizing Sheets 1071
48-3 Polarization by Reflection 1073
48-4 Double Refraction 1075
48-5 Circular Polarization 1081
48-6 Angular Momentum of Light 1084
48-7 Scattering of Light 1084
48-8 Double Scattering 1086

48
POLARIZATION
1069

49-1 Sources of Light 1091
49-2 Cavity Radiators 1092
49-3 Planck's Radiation Formula 1094
49-4 Photoelectric Effect 1096
49-5 Einstein's Photon Theory 1098
49-6 The Compton Effect 1100
49-7 Line Spectra 1103
49-8 Atomic Models The Bohn Hydrogen Atom 1105

49
LIGHT AND QUANTUM PHYSICS
1091

50-1 Matter Waves 1117
50-2 Atomic Structure and Standing Waves 1120
50-3 Wave Mechanics 1121
50-4 Meaning of Ψ 1123
50-5 The Uncertainty Principle 1125

50
WAVES AND PARTICLES
1117

I Relation between Linear and Angular Kinematics for a Particle Moving in a Plane A1
II Polar Vectors and Axial Vectors A4
III The Wave Equation for a Stretched String A5
IV Derivation of Maxwell's Speed Distribution Law A7
V Special Relativity—A Summary of Conclusions A9
VI The Differential Form of Maxwell's Equations and the Electromagnetic Wave Equation A14

SUPPLEMENTARY TOPIC

A The International System of Units A20
B Some Fundamental Constants of Physics A23
C Solar, Terrestrial, and Lunar Data A24
D The Solar System A25
E Periodic Table of the Elements A26
F The Particles of Physics A27
G Conversion Factors A28
H Mathematical Symbols and the Greek Alphabet A33
I Mathematical Formulas A33
J Trigonometric Functions A36
K Nobel Prizes in Physics A36
L The Gaussian System of Units A41

APPENDICES
