

## TABLE OF CONTENTS

	Page
Chapter 8. RIGID BODY MOTION. 1. ....	8-1
8-1 The kinematics of a rigid body .....	8-2
Translation and rotation .....	8-3
Velocity resulting from combined translation and rotation ..	8-8
8-2 Kinetic energy of a rigid body (plane motion) .....	8-9
Kinetic energy of rotation. Moment of inertia .....	8-9
Radius of gyration .....	8-12
The total kinetic energy .....	8-12
Rotation about a fixed axis which does not go through the center of mass. The "parallel-axis theorem." .....	8-13
8-3 The change of the kinetic energy of a rigid body on account of the work by external forces .....	8-15
8-4 The angular momentum component along a fixed axis of + rotation .....	8-20
8-5 The influence of external forces and torques on a combined translation-rotation .....	8-24
8-6 The pendulum .....	8-28
The force on the axis of rotation .....	8-30
The simple pendulum .....	8-32
Energy method for calculation of the frequency of oscillation .....	8-33
8-7 Rigid body motion under the influence of instantaneous impulses .....	8-36
8-8 Collisions between rigid bodies .....	8-40
8-9 Rolling .....	8-44
Equations of motion .....	8-45
Slipping .....	8-47
8-10 Statics of a rigid body .....	8-50
Problems .....	8-56
Chapter 9. ANGULAR MOMENTUM AS A VECTOR. RIGID BODY MOTION. 2. REVIEW OF EQUATIONS OF MOTION IN VECTOR FORM. ....	9-1
9-1 Angular momentum as a vector .....	9-2
The gyroscope .....	9-10
9-2 The angular momentum and torque as vector products .....	9-12
Angular momentum .....	9-12
Torque .....	9-14
Components of angular momentum and torque .....	9-16
9-3 The total angular momentum as the vector sum of the spin and orbital angular momenta .....	9-20
9-4 Review of the general equations of motion in vector form ..	9-23
Impulses .....	9-25
The spinning top .....	9-27
"Gyro-pendulum" .....	9-30
9-5 Conservation of vector angular momentum of a system of particles .....	9-32
Problems .....	9-34
Chapter 10. MOVING CO-ORDINATE SYSTEMS AND INERTIAL FORCES .....	10-1
10-1 The observer moves with constant velocity .....	10-3
10-2 The observer's co-ordinate system is accelerated .....	10-7
Gravitational force on the moon .....	10-14
The tides .....	10-17

		Page
	The principle of equivalence.....	10-23
	Rigid bodies in accelerated co-ordinate systems, and D'Alembert's principle.....	10-28
10-3	The observers co-ordinate system rotates.....	10-30
	The velocity according to S'.....	10-30
	The acceleration according to S'.....	10-34
	The inertial forces.....	10-38
	The effect of the earth's rotation.....	10-43
	The foucault pendulum.....	10-49
	Problems.....	10-51
Chapter 11	THE CONCEPTS OF TEMPERATURE AND HEAT - HEAT AS A FORM OF ENERGY.....	11-1
11-1	Temperature and heat.....	11-3
	Specific heat.....	11-4
	Fusion and vaporization.....	11-7
	The temperature scale.....	11-7
	Historical note*.....	11-10
11-2	Heat as a form of energy.....	11-12
	Conservation of energy.....	11-14
11-3	The gas law and the gas thermometer.....	11-15
	Origin of the gas law - Pressure and volume.....	11-15
	Origin of the gas law - Temperature.....	11-19
	The gas thermometer.....	11-19
	The ideal gas.....	11-23
	The gas constant, R, and molecular weights.....	11-24
	Digression: The atomic theory of chemistry.....	11-25
	Problems.....	11-30
Chapter 12	KINETIC THEORY AND THERMODYNAMICS	
	A. THE KINETIC THEORY OF GASES.....	12-1
12-1	Gas pressure.....	12-1
	The momentum transfer.....	12-2
	The frequency of collisions.....	12-3
	The pressure.....	12-4
	Temperature and molecular kinetic energy.....	12-5
12-2	Molecular velocities.....	12-7
	Velocity measurements.....	12-8
12-3	Avogadro's number and atomic and molecular sizes.....	12-12
	The Maxwell distribution.....	12-11
	Comparative size of various atoms and molecules.....	12-13
	Avogadro's number.....	12-15
	Atomic and molecular sizes.....	12-16
	Mean free path and collision frequency.....	12-23
	Effusion of gases.....	12-23
12-4	The specific heat of gases.....	12-26
	Equipartition of energy.....	12-31
12-5	Recapitulation.....	12-37
	B. THE FIRST LAW OF THERMODYNAMICS.....	12-39
12-6	Internal energy.....	12-39
	Free expansion of a gas.....	12-46
12-7	Thermodynamic behavior of an ideal gas.....	12-48
	Constant pressure and constant volume changes.....	12-50
	Constant temperature changes.....	12-52
	Adiabatic processes.....	12-54

	Page
C. THE SECOND LAW OF THERMODYNAMICS .....	12-61
12-8 The "directionality" of events in nature .....	12-61
All processes in nature are irreversible. Reversible processes are idealizations. ....	12-64
12-9 Conversion of heat into work .....	12-65
Efficiency of conversion in a non-periodic process ...	12-65
The Carnot cycle .....	12-68
The Carnot cycle has the highest efficiency .....	12-70
12-10 Probability and entropy .....	12-73
Probability of states .....	12-73
A simple illustration of the calculation of probability of states .....	12-73
Probability and entropy .....	12-76
Entropy, irreversibility and disorder .....	12-78
Free expansion .....	12-80
Heat flow between two bodies .....	12-80
Density distribution in an isothermal atmosphere .....	12-83
Problems .....	12-86
Chapter 13. INTRODUCTION TO WAVE MOTION.....	13-1
13-1 Introduction. Deformable bodies and conservation of momentum.....	13-1
13-2 Transverse and longitudinal waves on a coil spring.....	13-4
Transverse waves.....	13-5
longitudinal waves.....	13-10
waves in other media.....	13-15
13-3 Wave pulses of arbitrary shape. The principle of superposition.....	13-17
particle velocity and transverse force for waves of arbitrary shape.....	13-23
Travelling sine and cosine (harmonic) waves.....	13-26
Energy and power in a travelling harmonic wave.....	13-28
13-4 Sound waves in a gas column.....	13-31
The velocity of sound.....	13-31
Intensity and energy density of sound waves.....	13-36
13-5 Longitudinal waves in a solid bar.....	13-39
13-6 Reflection of waves.....	13-44
Conditions at an interface or junction.....	13-50
13-7 Standing waves.....	13-55
13-8 Characteristic frequencies and times - Media of finite size.....	13-57
String clamped at both ends:.....	13-57
Normal modes of motion.....	13-61
Fourier decomposition.....	13-66
Characteristic oscillations in two and three dimensions.	13-68
13-9 Forced motion and resonance.....	13-71
13-10 Dynamics of waves in differential form - The wave equation.....	13-73
Problems.....	13-77

Appendix A. Approximate Values of Some Physical Constants  
Appendix B. Natural Trigonometric Functions  
Appendix C. Time Derivative of a Vector Product
