

## CONTENTS

Preface

13

Introduction

15

## 1. ATOMS AND ATOMIC STRUCTURE – HISTORICAL PRELUDE page 22

Atoms and Elements

Electrons

*Electrolysis**Cathode Rays in Electric Discharges*

Atomic Structure

*The Atomic Nucleus**The Problem of the Stability of Atoms**Bohr's Hypothesis about Electron Orbits in Atoms –**Introduction of the Quantum of Action**Atomic Number – Isotopes**Structure of the Atomic Nucleus**Events leading up to the Discovery of the Neutron**Electrons, Protons and Neutrons in Atoms*

## 2. ATOM MECHANICS AND THE UNCERTAINTY PRINCIPLE page 43

Particles and Waves

*Particles**Wave Motion**Distinction between Streams of Particles and Waves*

The Nature of Light

*Electromagnetic Waves**Waves and/or Particles?*

Electrons as Waves!

Interpretation of Wave-Particle Dualism

*The Probability Interpretation*

*The Uncertainty Principle*

Wave Mechanics and the Structure of Atoms

*The Hydrogen Atom*

*Electron Spin*

*The Exclusion Principle of Pauli*

*Electron Structure of Atoms*

**3. MAINLY ABOUT ELECTRONS page 67**

Applications of the Diffraction of Particles

*Determination of Crystal Structure*

*The Electron Microscope*

Electrical Properties of Materials

*Electrical Conductors, Semi-Conductors and  
Insulators*

Electrons in Solids

*Conductors and Insulators*

*Semi-Conductors*

*Conduction by Positive Holes*

Rectifiers, Amplifiers and Oscillators

*Electronic Valves*

*Transistors*

*p-n Junction as Rectifier*

*Junction Transistor as Amplifier*

Magnetic Properties of Solids

*Diamagnetic and Paramagnetic Substances*

*Ferromagnetism,*

*Relation of Magnetic Properties to Electronic Structure  
of Materials*

Mystery near Absolute Zero

*Attainment of Very Low Temperatures*

• *Superconductivity*  
*Liquid Helium and Superfluidity*

Automatic Calculation and Control

*The Binary Scale*  
*Amount of Information*  
*Storage Systems*  
*A Typical High Speed Computer*

The Maser

4. **THE WONDERLAND OF RELATIVITY** page 112

Absolute Velocity and the Luminiferous Aether

*The Aether*  
*The Experiment of Michelson and Morley*

Einstein's Theory

*New Ideas about Length, Time and Simultaneity*  
*Space-time*  
*Mass and Energy in Relativity Theory*  
*Collisions in Relativistic Mechanics*

5. **WONDER UPON WONDER – RELATIVISTIC  
QUANTUM THEORY** page 126

Relativity and Quantum Theory – The Negative Mass  
Dilemma

The New Aether

*Creation and Annihilation of Matter – The Positive  
Electron*  
*Polarization and Field Fluctuations in the Vacuum*  
*The Lamb-Retherford Experiment*  
*The Anomalous Magnetic Moment of the Electron*

Matter and Anti-Matter

*Protons and Anti-protons*  
*Anti-neutrons*  
*Anti-gravity?*

The New Aether – Some Final Comments

6. **EXPLORING THE ATOMIC NUCLEUS – THE TOOLS AND SOME OF THE RESULTS** page 139

Survey of Problems and Methods

Measuring Nuclear Properties

*The Masses and Binding Energies of Nuclei*

*Magnetic Moments of Nuclei*

Accelerators

*The Cyclotron*

*The Frequency-Modulated Cyclotron*

*The Proton Synchrotron*

*Acceleration of Electrons*

Detecting Fast Particles

*Counters for Fast Particles – the Geiger-Muller Counter*

*The Scintillation Counter*

*Čerenkov Counters*

*Coincidence and Anti-Coincidence Counting Systems*

*Track-observing Devices – The Wilson Cloud Chamber*

*The Bubble Chamber*

*The Nuclear Photographic Emulsion*

*Identification of Fast Particles*

Some Nuclear Reactions

*Artificial Radioactivity*

7. **EXPLOITATION OF THE NUCLEUS** page 173

Fission and Fusion as Sources of Nuclear Energy

Nuclear Fission and Chain Reactions

*Discovery of Nuclear Fission*

*Possibility of a Chain Reaction*

*Chain Reaction with Natural Uranium*

Fission Reactors

*General Remarks*

*Uses of Reactors*

*Large Scale Primary Reactors for Electric Power Generation*

*Reactors for Marine Propulsion*  
*Fast Breeder Reactors*  
*Other Experimental Reactors*  
*Utilisation of Fission Products*

Radioisotopes in Medicine, Industry and Research  
*Dating by Radiocarbon*

Energy from Nuclear Fusion  
*Survey of the Problem and the Possibilities*  
*The Pinch Effect*  
*Zeta and the Solar Corona*  
*Other Experiments*

**8. COSMIC RAYS AND THE STRANGE PARTICLES**  
page 201

Historical Introduction

Soft Showers and the Positron

Yukawa's Theory of Nuclear Forces, Mesons and the  
Hard Component

*Properties of Pi- and Mu-mesons*  
*Pions and Nuclear Forces*

The Strange Particles

*Discovery of the Strange Particles*  
*Production and Interaction of Strange Particles with*  
*Matter*  
*Baryon Number and Strangeness*  
*Strange Atoms*  
*Strange Nuclei*

Discovery of the Antiproton

*Antineutrons*  
*Antihyperons*

**9. THE STRANGEST ONE OF ALL** page 225

Beta-radioactivity and the Neutrino

*Beta-radioactivity*

## Contents

*Decay of Muons and of Pions*

*Pauli's Neutrino Hypothesis*

*Detection of Neutrinos*

Right- and Left-Handedness in Nature – Are they  
Equivalent?

*Right- and Left-Handedness with Fundamental  
Particles*

*Discovery of Reflection Asymmetry*

*The Neutrino as a Ghost Particle*

*A Conservation Law for Light Particles (Leptons)?*

*Time-Reversal Symmetry*

Summary of Interactions

The Material Mansion

The Energy of the Stars

## 10. RADIOASTRONOMY page 246

Historical Introduction

Basic Differences between Optical and Radio Astronomy

The Search for Higher Resolution

*Radio Interferometers*

*Multiple Aerial Arrays*

*Radio Telescopes*

*Detection of Very Weak Signals*

Radio Emission from the Sun

*Some Relevant Properties of the Sun*

*Characteristics of Solar Radio Emission*

Cosmic Radio Emission

*The Structure of the Universe*

*Continuous Radio Emission from Cosmic Sources*

*Identification of Discrete Sources – Colliding Galaxies*

*The Hydrogen Line and the Spiral Structure of our  
Galaxy*

Radio Emission from the Moon and Planets

*Application of Radioastronomy to the Study of Meteors*

**11. EXPLORING THE UPPER ATMOSPHERE** page 272

Introduction

Vertical Sounding Rockets and their Applications

*Rockets for High Altitude Research*

*Experiments with Rocket-borne Instruments*

*Recovering the Observations*

*Determining the Flight Path of a Rocket*

Ultraviolet and X-rays from the Sun

Pressure, Density, Temperature and Winds in the High Atmosphere

Composition of the Atmosphere

The Ionosphere

Magnetic and Ionospheric Storms and the Aurora

Whistlers

**12. ARTIFICIAL SATELLITES AND SPACE PROBES**  
page 294

Advantages of Satellite Observing Stations

Orbits, under Gravity

Artificial Satellites

*Use of Multistage Rockets for Launching Satellites*

*Acquisition and Tracking*

*Scientific Observations with Satellites*

*The First Artificial Satellites*

*Information obtained by Analysis of the Orbits of the First Satellites*

The Scientific Exploration of the Moon and Interplanetary Space

*Lunar Probes*

*Deep Space and Planetary Probes*

*The First Space Probes*

The Grandest Scientific Experiments Ever.

Retrospect and Prospect

Index

331
