

# CONTENTS

**Data Tables** xii

**Preface** xiii

## **1 The Physical Description of Nature** 1

- 1-1* Introduction 1  
*1-2* Theories in Physics 1  
*1-3* The International System of Units (SI) 2  
*1-4* Exponential Notation and Prefixes 4  
*1-5* Converting Units 4  
 Exercises 6

## **2 Vectors** 7

- 2-1* The Algebra of Real Variables 7  
*2-2* Vector Quantities 8  
*2-3* Properties of Vector Addition 9  
*2-4* Multiplication of a Vector by a Real Number 9  
*2-5* Analytic Method of Adding Vectors—  
 Components 10  
*2-6* Vector Subtraction 12  
*2-7* The Scalar Product of Vectors 14  
*2-8* The Vector Product of Vectors 15  
*2-9* Summary 16  
 Questions 17  
 Problems 17

## **3 Forces and Particles at Rest** 19

- 3-1* Introduction 19  
*3-2* Newton's Third Law 20  
*3-3* Tentative Definition of Force 20  
*3-4* Newton's First Law 22  
*3-5* The Weight Force 24  
*3-6* Constraint and Friction Forces 25

*3-7* What Is a Particle? 28

*3-8* Summary 29

Questions 30

Problems 30

## **4 Rigid Bodies at Rest** 33

- 4-1* What is a Rigid Body? 33  
*4-2* Definition of Torque 33  
*4-3* Formulas for Torque 34  
*4-4* Torque in Three Dimensions 35  
*4-5* The Conditions for Equilibrium—Statically  
 Determinate Problems 37  
*4-6* Statically Indeterminate Problems 39  
*4-7* The Center of Gravity 40  
*4-8* Summary 41  
 Questions 42  
 Problems 42

## **5 Motion Along a Straight Line** 46

- 5-1* Introduction 46  
*5-2* The Concept of a Function 46  
*5-3* Position of a Particle 47  
*5-4* The Velocity 47  
*5-5* Reversing the Derivative Operation 49  
*5-6* Acceleration 52  
*5-7* The Connection Between  $X(t)$ ,  $V(t)$ , and  $A(t)$  53  
*5-8* Constant-Acceleration Examples 53  
*5-9* Acceleration as a Function of Position 55  
*5-10* A Computer Program 58  
*5-11* Calculus Formulas 59  
*5-12* Summary 59  
 Questions 60  
 Problems 60

---

**6 The General Motion of a Particle** 64

---

- 6-1 Definitions and Notations 64
- 6-2 The Geometric View 66
- 6-3 Projectile Motion 66
- 6-4 A Coupled Problem—Acceleration as a Function of Position 67
- 6-5 Tangential and Perpendicular Accelerations 71
- 6-6 Angular Speed 76
- 6-7 A Change in Notation 77
- 6-8 Frames of Reference—The Galilean Transformation 77
- 6-9 Summary 79
- Questions 80
- Problems 80

---

**7 Newton's Three Laws of Mechanics** 84

---

- 7-1 General Remarks About Newton's Second Law 84
- 7-2 Inertial Frames—Newton's First Law 85
- 7-3 Inertial Mass 86
- 7-4 Force 88
- 7-5 Newton's Third Law 91
- 7-6 The Procedure for Applying Newton's Laws 91
- 7-7 An Example of How a Force Expression Is Determined 92
- 7-8 Summary 94
- Questions 94
- Problems 95

---

**8 Applications of Newton's Laws** 97

---

- 8-1 Introduction 97
- 8-2 Friction and Constraint Forces 97
- 8-3 The Force Exerted by the Air 101
- 8-4 The Force Exerted by a Rope or String 104
- 8-5 Pulleys 105
- 8-6 Engineering Design 106
- 8-7 Fictitious Forces 109
- 8-8 Summary 110
- Questions 111
- Problems 111

---

**9 Oscillations** 116

---

- 9-1 Introduction 116
- 9-2 The Spring Force 116
- 9-3 Differential Equations 117
- 9-4 Why Differential Equations? 120
- 9-5 Simple Harmonic Motion 121
- 9-6 Phase and Amplitude 123
- 9-7 The Simple Pendulum 124
- 9-8 Damped Oscillations 127
- 9-9 Summary 128
- Questions 129
- Problems 129

---

*Preview of Chapters 10 to 14*  
**CONSERVATION LAWS**132

---

---

**10 Center of Mass** 134

---

- 10-1 Systems 134
- 10-2 A Special Case 135
- 10-3 Linear Property of the Derivative 135
- 10-4 Center of Mass 135
- 10-5 The Center of Mass for a Rigid Body 137
- 10-6 Uses of the Center of Mass 138
- 10-7 Summary 140
- Questions 140
- Problems 141

---

**11 Conservation of Momentum** 143

---

- 11-1 Introduction 143
- 11-2 Momentum 143
- 11-3 Conservation of Momentum 144
- 11-4 How a Rocket Works 146
- 11-5 Impulse 147
- 11-6 Collisions 149
- 11-7 Summary 150
- Questions 151
- Problems 151

---

**12 Torque and Angular Momentum** 154

---

- 12-1 Introduction 154
- 12-2 Another Formula for Torque 154
- 12-3 Angular Momentum for a Particle 155
- 12-4 Relation Between Torque and Angular Momentum 156
- 12-5 Central Forces 157
- 12-6 A System of Particles 158
- 12-7 Angular Momentum of Rigid Objects 159
- 12-8 Uses of Torque and Angular Momentum for Rigid Bodies 161
- 12-9 The Conservation of Angular Momentum 164
- 12-10 Static Rigid Bodies 164
- 12-11 Summary 165
- 12-12 Appendix 166
- Questions 166
- Problems 167

---

**13 Work and Kinetic Energy** 170

---

- 13-1 Introduction 170
- 13-2 One-Dimensional, Constant-Force Case 170
- 13-3 The One-Dimensional, Variable-Force Case 171
- 13-4 Three-Dimensional Case 175
- 13-5 The Work–Kinetic-Energy Theorem for a System 178

13-6	Estimates Using Energy	180
13-7	Nonconservation of Kinetic Energy	180
13-8	Power	180
13-9	Summary	181
	Questions	182
	Problems	182

---

## 14 Mechanical Energy 185

---

14-1	Introduction	185
14-2	Potential Energy	185
14-3	Mechanical Energy	187
14-4	Momentum and Energy Changes in Collisions	189
14-5	Elastic Collisions	190
14-6	The Center-of-Mass Frame	192
14-7	A Clarification on Potential Energy	194
14-8	Summary	196
	Questions	196
	Problems	197

*Preview of Chapters 15 and 16*

## FURTHER APPLICATIONS OF THE CONSERVATION PRINCIPLES 200

---

---

## 15 The Motions of Rigid Bodies 202

---

15-1	Introduction	202
15-2	Rolling Without Sliding	203
15-3	Rolling With Sliding	205
15-4	The Kinetic Energy of a Rigid Body	206
15-5	A Generalization of the Torque-Angular-Momentum Relation	208
15-6	Torque and Angular Momentum as Vectors	209
15-7	Summary	212
	Questions	213
	Problems	213

---

## 16 Newton's Gravitational Theory 215

---

16-1	Introduction	215
16-2	A Search for a Frame of Reference	215
16-3	The Beginning of Modern Science	218
16-4	Newton's Analysis of Planetary Motion	219
16-5	The Assumption of Universality	222
16-6	Examples of the Universal Theory	223
16-7	The Measurement of $G$	228
16-8	Gravitational Potential Energy	229
16-9	But Copernicus, the Sun Does Move!	231
16-10	A Really Good Theory	232
16-11	Summary	232
	Questions	232
	Problems	233

---

## 17 Continuum Mechanics—Statics 237

---

17-1	Introduction	237
17-2	Solids—Stresses	238
17-3	Solids—Strains	239
17-4	Relation of Strain to Stress	239
17-5	Liquids and Gases	241
17-6	Density	241
17-7	Pressure in a Fluid at Rest	242
17-8	Archimedes' Principle	244
17-9	Measuring Pressure	245
17-10	Surface Tension	246
17-11	Summary	247
	Questions	248
	Problems	249

---

## 18 Continuum Mechanics—Dynamics 251

---

18-1	Forces in Deformable Bodies	251
18-2	Equation of Motion	252
18-3	The Continuity Equation	253
18-4	Problems of Continuum Mechanics	254
18-5	Laminar Flow in a Pipe	255
18-6	An Incompressible Fluid Without Shear	256
18-7	Turbulence	258
18-8	Summary	259
	Questions	260
	Problems	260

---

## 19 Einstein's Relativity 262

---

19-1	Introduction	262
19-2	Einstein's Special Theory of Relativity— An Introduction	264
19-3	Time Dilation	265
19-4	Length Contraction	267
19-5	The Lorentz Transformation	268
19-6	An Example of the Use of the Lorentz Transformation	270
19-7	The Mechanics of the Special Theory of Relativity	271
19-8	Work and Energy	274
19-9	The Connection Between Mass and Energy	274
19-10	The General Theory of Relativity	276
19-11	Summary	278
	Questions	279
	Problems	280

---

## 20 Temperature 284

---

20-1	Operational Definitions	284
20-2	Example Thermometers	284
20-3	The Choice of a Standard	286
20-4	Absolute Zero—The Kelvin Scale	287
20-5	The Celsius and Fahrenheit Scales	288

20-6	The Work About Absolute Zero	289
20-7	Summary	289
	Questions	289
	Problems	290

---

## 21 Equations of State 292

---

21-1	Introduction	292
21-2	Functions of Several Variables	292
21-3	A Sample Equation of State	293
21-4	Equation of State for a Gas	294
21-5	Equation-of-State Surfaces	297
21-6	How to Use an Equation of State	297
21-7	Equations of State in General	298
21-8	Processes	299
21-9	Summary	299
	Questions	300
	Problems	300

---

## 22 The First Law of Thermodynamics 303

---

22-1	Introduction	303
22-2	Determining Values for $Q$	304
22-3	Thermal Energy	306
22-4	Two Kinds of Work	306
22-5	Processes for Ideal Gases	307
22-6	Water and the Steam Engine	313
22-7	The Body as an Engine	315
22-8	Refrigerators and Heat Pumps	315
22-9	Heat Capacity, Heat of Fusion, and Heat of Vaporization	317
22-10	An Example Involving Mechanical Energy	320
22-11	Summary	321
	Questions	322
	Problems	322

---

## 23 Heat-Flow Rate 326

---

23-1	Introduction	326
23-2	Conduction	326
23-3	Radiation	328
23-4	Convection	330
23-5	Control of Heat Flows	332
23-6	Summary	332
	Questions	333
	Problems	333

---

## 24 The Second Law of Thermodynamics 335

---

24-1	Introduction	335
24-2	Two Statements of the Second Law	336
24-3	Reversible and Irreversible Processes	337
24-4	Carnot's Corollaries	338
24-5	Proof of Corollary 1	341

24-6	The Thermodynamic Temperature	342
24-7	Entropy	342
24-8	Statement $c$ of the Second Law	345
24-9	Summary	347
	Questions	348
	Problems	348

---

## 25 The Extension and Explanation of Thermodynamics by Molecular Theory 351

---

25-1	Introduction	351
25-2	Uses in Chemistry	352
25-3	The Equation of State of an Ideal Gas	354
25-4	The Translational Kinetic Energy of a Molecule	357
25-5	The Van der Waals Equation of State	359
25-6	The Thermal Energy of a Diatomic Gas	360
25-7	The Speed Distribution of the Molecules of a Gas	362
25-8	The Energy Function for a Crystalline Solid	363
25-9	Diffusion and Brownian Motion	363
25-10	Summary of the Successes and Limitations of Molecular Theory	366
	Questions	367
	Problems	368

---

## 26 The Thermodynamics of Energy Uses and Resources 371

---

26-1	Introduction	371
26-2	Uses of Low-Temperature Thermal Energy	371
26-3	Energy for Electricity	374
26-4	Energy for Transportation	379
26-5	Concluding Remarks	379
	Questions	380
	Problems	380

---

## 27 Waves 382

---

27-1	Introduction	382
27-2	Types of Wave Motion	382
27-3	The One-Dimensional Traveling Wave	383
27-4	The Transverse Wave on a String	384
27-5	The Longitudinal Wave	386
27-6	Wave Trains	388
27-7	Sinusoidal Wave Trains	389
27-8	Propagation of Energy by a One-Dimensional Wave	391
27-9	Waves in Two and Three Dimensions	393
27-10	The Doppler Effect	395
27-11	Summary	399
	Questions	400
	Problems	401

---

**28 Superposition of Waves** 404

---

- 28-1 Introduction 404
- 28-2 Superposition 404
- 28-3 The Wave Equation and Superposition 405
- 28-4 Interference of Sinusoidal Waves 406
- 28-5 Phasors 408
- 28-6 The Reflection of a Wave 409
- 28-7 Standing Waves 412
- 28-8 Fourier Series 416
- 28-9 Beats 417
- 28-10 Summary 419
  
- Questions 420
- Problems 420

---

*Preview of Chapters 29 to 46*

---

**ELECTRICITY AND MAGNETISM** 424

---

---

**29 The Electric Force** 427

---

- 29-1 Electric Charge 427
- 29-2 The Coulomb Force Law 429
- 29-3 Applying the Coulomb Force Law with a Continuous Distribution of Charge 433
- 29-4 A Limitation on Coulomb's Law 435
- 29-5 Summary 436
  
- Questions 436
- Problems 437

---

**30 The Electric Field** 440

---

- 30-1 The Definition of the Electric Field 440
- 30-2 The Calculation of the Electric Field due to a Known Distribution of Point Charges 441
- 30-3 A Visual Representation of the Electric Field 442
- 30-4 The Calculation of the Electric Field due to a Known Continuous Distribution of Charge 443
- 30-5 The Electric Field Within a Conductor in Electrostatic Equilibrium 447
- 30-6 Quantization of Charge—The Millikan Oil-Drop Experiment 448
- 30-7 The Electric Dipole in a Uniform Electric Field 449
- 30-8 Summary 450
  
- Questions 451
- Problems 452

---

**31 The Electric Potential** 456

---

- 31-1 Introduction 456
- 31-2 The Electric Potential Energy 456

- 31-3 The Electric Potential Difference 460
- 31-4 The Electric Potential 463
- 31-5 The Calculation of the Electric Field from the Electric Potential 466
- 31-6 The Electric Dipole 468
- 31-7 A Second Look at the Conservative Nature of the Coulomb-Force Law 472
- 31-8 Summary 473
  
- Questions 475
- Problems 475

---

**32 Gauss's Law** 479

---

- 32-1 Introduction 479
- 32-2 Flux 479
- 32-3 Gauss's Law for Electrostatics 482
- 32-4 Where Does the Charge on a Conductor Reside? 484
- 32-5 An Experimental Test of Coulomb's Law 486
- 32-6 The Electric Field Near the Surface of a Charged Conductor 487
- 32-7 Using Gauss's Law and Symmetry to Calculate the Electric Field 488
- 32-8 Electrostatics Problems in Which Potential Differences are Specified 492
- 32-9 Summary 494
  
- Questions 494
- Problems 495

---

*Preview of Chapters 33 to 38*

---

**FROM ELECTROSTATICS TO CURRENT ELECTRICITY AND MAGNETISM**498

---

---

**33 Steady Electric Currents, Emf, and Dc Circuits** 500

---

- 33-1 Introduction 500
- 33-2 A Wire Carrying a Current 500
- 33-3 Emf, Internal Resistance, and a Simple Circuit 502
- 33-4 Energy Considerations for the Simple Circuit 506
- 33-5 Kirchhoff's Rules of Circuit Analysis 507
- 33-6 Simplifying Circuits 510
- 33-7 Galvanometers, Ammeters, and Voltmeters 512
- 33-8 Resistance: Ohm's Law and Resistivity 513
- 33-9 Current Density, Conductivity, and Ohm's Law 517
- 33-10 Microscopic Model of Ohm's Law 518
- 33-11 Summary 521
- 33-12 Appendix: The Lead-Acid Storage Cell 522
  
- Questions 523
- Problems 524

---

**34 The Magnetic Force** 529

---

- 34-1 Magnetism 529
- 34-2 The Magnetic Field and the Magnetic Force on a Moving Charge 530
- 34-3 The Motion of a Charged Particle in a Uniform Magnetic Field 533
- 34-4 Some Applications of the Magnetic Force on a Moving Charge 535
- 34-5 The Magnetic Force on a Current-Carrying Conductor 539
- 34-6 Magnetic Torque on a Current Loop in a Uniform Magnetic Field 540
- 34-7 Summary 543
- Questions 544
- Problems 544

---

**35 The Magnetic Field** 548

---

- 35-1 Introduction 548
- 35-2 The Biot-Savart Law 548
- 35-3 Applications of the Biot-Savart Law 549
- 35-4 The Definitions of the Ampère and the Coulomb 552
- 35-5 The Magnetic Field Due to a Moving Charge 553
- 35-6 Gauss's Law for Magnetism and Ampère's Law 555
- 35-7 Using Gauss's Law, Ampère's Law, and Symmetry to Calculate the Magnetic Field 557
- 35-8 The Displacement Current and Ampère's Law 560
- 35-9 Summary 564
- Questions 565
- Problems 566

---

**36 Faraday's Law of Electromagnetic Induction** 571

---

- 36-1 Introduction 571
- 36-2 The Induced Emf and Faraday's Law 571
- 36-3 Energy Considerations 576
- 36-4 The Induced Electric Field and Faraday's Law 577
- 36-5 Motional Emf 579
- 36-6 An Observable Difference between Conservative and Nonconservative Electric Fields 581
- 36-7 Summary 583
- Questions 584
- Problems 585

---

**37 Inductance, Capacitance, and Circuits** 590

---

- 37-1 Introduction 590
- 37-2 Self-Inductance 590
- 37-3 Mutual Inductance 592
- 37-4 The Effect of Self-Inductance in a dc Circuit 593
- 37-5 The Reading of a Voltmeter Connected Across an Inductor 596

- 37-6 Energy Stored in an Inductor 597
- 37-7 Magnetic Energy Density 598
- 37-8 The Effect of Magnetic Materials on Inductance 599
- 37-9 Capacitance 601
- 37-10 Charging and Discharging a Capacitor 603
- 37-11 Equivalent Capacitance 605
- 37-12 Energy Stored in a Capacitor and Electric Energy Density 605
- 37-13 The Effect of a Material on a Capacitor 608
- 37-14 The LC Oscillator 610
- 37-15 Summary 612
- Questions 614
- Problems 615

---

**38 Ac Circuits** 621

---

- 38-1 Introduction 621
- 38-2 The Parallel Circuit 622
- 38-3 The Series Circuit 625
- 38-4 Power in an ac Circuit 629
- 38-5 Converting ac to dc 631
- 38-6 Summary 631
- Questions 633
- Problems 633

---

**39 Electric Properties of Materials** 635

---

- 39-1 The Electric Effects of Insulators 635
- 39-2 Polarization 636
- 39-3 Polarization Charge, Polarization, and Gauss's Law 639
- 39-4 The Electric Displacement and Gauss's Law 640
- 39-5 Energy of a Charged Capacitor 643
- 39-6 Dielectrics and the First Law of Thermodynamics 645
- 39-7 Microscopic Models of Polarization 645
- 39-8 Summary 647
- Questions 648
- Problems 648

---

**40 Magnetic Properties of Materials** 651

---

- 40-1 Introduction 651
- 40-2 Magnetic Field Vectors, Ampère's Law, and Gauss's Law for Magnetism 651
- 40-3 Paramagnetic and Diamagnetic Materials 654
- 40-4 Ferromagnetic Materials 656
- 40-5 Solving a Magnetostatics Problem 657
- 40-6 Magnetic Energy 659
- 40-7 Microscopic Models of Magnetization 660
- 40-8 Summary 662
- Questions 664
- Problems 664

---

**41 The Electric Field  
Due to a Charge Moving  
with a Constant Velocity** 667

---

- 41-1 Introduction 667  
41-2 The Lorentz Transformation Law for the  
Electric Field 668  
41-3 The Electric Field Due to a Moving Charge 669  
41-4 Summary 672  
Questions 672  
Problems 672

---

*Preview of Chapters 42 to 45*  
**ELECTROMAGNETISM  
AND OPTICS** 674

---

---

**42 Electromagnetic Waves** 676

---

- 42-1 Introduction 676  
42-2 The Speed of an Electromagnetic Wave 677  
42-3 Energy Propagation and Radiation Pressure 682  
42-4 Measuring the Speed of Light 686  
42-5 Summary 689  
Questions 689  
Problems 690

---

**43 Physical Optics** 692

---

- 43-1 Introduction 692  
43-2 Huygens' Principle of Wave Propagation 692  
43-3 Optical Interference from Two Coherent  
Sources 693  
43-4 Intensity Distribution from Two-Slit  
Interference 697  
43-5 Lloyd's Mirror 698  
43-6 Two-Source Interference Effects by  
Beam Splitting 698  
43-7 The Michelson Interferometer 701  
43-8 The Diffraction Grating 702  
43-9 Diffraction 706  
43-10 Diffraction Effects on Intensities from Double Slits  
and Diffraction Gratings 711  
43-11 Summary 711  
Questions 712  
Problems 713

---

**44 Geometrical Optics** 717

---

- 44-1 Straight-Line Propagation of Light 717  
44-2 Reflection at a Plane Surface 717  
44-3 The Spherical Mirror 719  
44-4 Refraction at a Plane Surface 725

- 44-5 Image Formation by a Spherical  
Refracting Surface 730  
44-6 Thin Lenses 732  
44-7 Optical Instruments 735  
44-8 Summary 737  
Questions 739  
Problems 739

---

**45 Polarization of Light** 743

---

- 45-1 Polarized and Unpolarized Light 743  
45-2 Producing Plane-Polarized Light from  
Unpolarized Light 744  
45-3 The Intensity of the Light Transmitted by  
Plane Polarizers 746  
45-4 Superposition of Plane-Polarized Light 748  
45-5 Birefringent Materials and Retarders 750  
45-6 Some Effects of Polarization 752  
45-7 Summary 754  
Questions 754  
Problems 755

---

**46 Introduction to Quantum Physics** 757

---

- 46-1 Introduction 757  
46-2 The Electron 757  
46-3 Line Spectra 758  
46-4 J.J. Thomson's Model of the Atom 759  
46-5 Rutherford Scattering and the Nuclear Atom 760  
46-6 Planck's Black-Body Radiation Law 762  
46-7 The Photon and Einstein's Theory of the  
Photoelectric Effect 764  
46-8 Bohr's Model of the Atom 768  
46-9 De Broglie's Matter Waves 772  
46-10 The Davisson-Germer Experiment 773  
46-11 The Wave Description of Matter 775  
46-12 Wave Packets 776  
46-13 The Probabilistic Interpretation of the  
Wave Function 777  
46-14 The Uncertainty Principle 778  
46-15 Bohr Orbits 779  
46-16 Summary 780  
Questions 782  
Problems 783

---

**Appendix A The Radius of Curvature  
of an Ellipse** 786

---

---

**Appendix B Mathematical Tables** 788

---

**Answers to Odd-Numbered Problems** A1

**Index** II
