

Contents

A	Introduction A, Historical	1
B	Introduction B, Optical Illusions	16
C	Introduction C, Units of Measurement, Powers of Ten, and Significant Figures	28

MECHANICS

1.	Speed and Velocity	39
2.	Accelerated Motion	48
3.	Gravity and Falling Bodies	59
4.	Newton's First and Second Laws of Motion	72
5.	Vector Addition and Composition of Forces	84
6.	Newton's Law of Gravitation and Third Law of Motion	104
7.	Friction and Streamlining	115
8.	Projectiles	129
9.	Work, Energy, and Power	145
10.	Conservation of Energy and Momentum	158
11.	Circular Motion and Kepler's Laws	177
12.	Gravitational Fields and Orbiting Satellites	192
13.	Kinematics and Dynamics of Rotation	208

HEAT

14.	Temperature, Specific Heat, and Thermal Expansion	228
15.	Heat Transfer and the Atmosphere	243
16.	Thermodynamics and Rocket Engines	261

SOUND

17.	Vibrations and Waves	277
18.	Sound: Its Transmission and Detection	292
19.	Resonance, Beats, Doppler Effect, and Interference	303
20.	Sources of Musical Sounds	318

ELECTRICITY AND MAGNETISM	21. Electricity at Rest	334
	22. Electricity in Motion	346
	23. Electric Fields, Potential, and Capacitance	361
	24. Magnetism	374
	25. Effects of Electric Currents	389
	26. Magnetic Induction	402
	27. Induced Electric Currents	413
	28. Dipole Moments and Magnetism	425
	29. Alternating Currents	442
	30. The Atomic Structure of Matter	459
LIGHT	31. Properties of Light	472
	32. Refraction and Dispersion	488
	33. Lenses	507
	34. The Science of Color	526
	35. Diffraction and Interference of Light	536
	36. Single and Multiple Aperture Diffraction	551
	37. Light Sources and Their Spectra	566
	38. Electromagnetic Waves and Vacuum Tubes	584
39. The Solid State and Semiconductors	597	
40. The Polarization of Light	609	
ATOMIC STRUCTURE	41. The Discovery of the Electron	624
	42. Isotopes and the Periodic Table	637
	43. The Photoelectric Effect	650
	44. The Structure of Atoms	663
	45. Spinning Electrons	678
	46. Moving Frames of Reference	694
	47. Interferometers and Lasers	717
	48. Relativity	737
	49. Electron Optics	750
	50. X Rays	765
	51. Photon Collisions and Atomic Waves	777
NUCLEAR PHYSICS	52. Radioactivity	799
	53. Spontaneous Disintegration and Transmutation	809
	54. Beta and Gamma Rays	824
	55. Atomic Collisions and Nuclear Disintegration	837
	56. Cosmic Rays	854

57.	Atomic Particle Accelerators	872
58.	Transmutation of the Elements	894
59.	Neutron and Gamma Ray Reactions	914
60.	Special Atomic and Nuclear Effects	929
61.	The Atomic Nucleus	942
62.	Fission and Fusion	956
63.	Nuclear Energy	971
64.	Elementary Particles	991
65.	Conservation Laws and the Eightfold Way	1023
66.	Field Theory and World Lines	1042

APPENDICES

I.	The English System of Units	1061
II.	Elements of Trigonometry	1072
III.	The Nobel Prize Winners in Physics	1077
IV.	The Periodic Table of the Chemical Elements	1080
V.	Electron Subshells	1081
VI.	Complete List of the Stable Isotopes of the Chemical Elements	1083
VII.	Relative Masses of One Stable Isotope for Each of the Elements	1086
VIII.	Table of Isotopes and Their Properties	1088
IX.	Common Logarithms	1092
X.	The Radioactive Nuclides of the Heavy Elements Showing Decay Schemes	1095
XI.	Abbreviations Used in this Text	1097
XII.	The Physical Constants (on page opposite inside back cover)	
XIII.	The Trigonometric Functions (Natural) (on inside back cover)	
	INDEX	1099
