Preface	xi
1. Introduction to a shock wave	1
1.1 Breakdown of a genuine solution	1
1.2 Conservation law and jump condition	3
1.3 Stability consideration, entropy condition and shocks	5
1.4 Derivation of the jump conditions for a curved shock in gas dynamics	11
1.5 The persistence of a shock	17
2. Infinite system of compatibility conditions for a single conservation law in one space dimension	21
2.1 Derivation of the infinite system of compatibility conditions	21
2.2 Propagation of a weak shock : approximate solution	24
2.3 Existence and uniqueness of the solution of the infinite system	26
2.4 A new theory of shock dynamics : analytic considerations	30
2.5 A new theory of shock dynamics : comparison of numerical results with the exact solution	33
2.6 Conclusion	38
3. One-dimensional piston problem : an application of NTSD	40
3.1 Introduction	40
3.2 Dynamical conditions of compatibility	41
3.3 Initial conditions for the piston problem	47
3.4 Numerical results and discussion	49
4. Bicharacteristic curves and shock rays	54
4.1 The wave equation	54
4.2 Shock manifold partial differential equation (SME)	60
4.3 SMEs for a system of conservation laws in multi-dimensions	64
	ix

4.4 Shock rays and equivalence of shock manifold equations	68
4.5 Shock manifold equation for a weak shock	73
5. Compatibility conditions on a shock manifold in multi-dimensions	76
5.1 Introduction	76
5.2 Preliminary geometrical ideas for a moving curve in two space dimensions	77
5.3 Geometrical compatibility conditions	78
5.4 Ray coordinate system	80
5.5 Kinematical compatibility conditions	82
5.6 The first set of dynamical compatibility conditions	83
5.7 The second set of dynamical compatibility conditions	86
5.8 First and second set of equations in shock ray theory	91
6. Kinematics of a nonlinear wavefront	96
6.1 Introduction	96
6.2 Some basic results for a hyperbolic system of first-order equations	97
6.3 Derivation of nonlinear ray equations	100
6.4 Nonlinear ray equations in gas dynamics	103
6.5 Nonlinear ray equations in two space dimensions in non-dimensional variables	107
6.6 An alternative approach to NTSD and some results on defocusing in the caustic region	115
References	121
