Preface	<i>page</i> v
List of symbols	xiii
List of contributors	xv
1 Rheological behaviour of matter	1
1.1 Rheology and its parameters	1
1.2 Elastic after-effects, relaxation, hysteresis	5
1.3 Methods of measuring	6
References to chapter 1	11
2 Structure of matter in relation to its elastic and plastic behaviour and failure	12
2.1 Cohesive and repulsive forces	12
2.2 Types of bonds	14
2.3 Cohesion and rheological properties	19
2.4 Structure of multiphase systems	27
References to chapter 2	34
3 Specific structures and rheological properties	36
3.1 Solid matter	36
3.2 The transition solid \rightleftharpoons fluid. Visco-elastic behaviour	41
3.3 Composite solids	45
3.4 Fluids	48
References to chapter 3	50
4 Rheological phenomena	51
4.1 Introduction	51
4.2 Elasticity	52
4.3 Viscosity and plasticity	59
4.4 Strength	83
4.5 Time and temperature effects in rheology	97
References to chapter 4	102

5	Gases	<i>page</i> 103
5.1	Introduction	103
5.2	Basic properties of gases	103
5.3	Elasticity (compressibility)	105
5.4	Viscosity	107
	References to chapter 5	108
6	Simple liquids	109
6.1	Definition of an ideal simple liquid	109
6.2	Static elasticity (compressibility)	110
6.3	Dynamic elasticity (impact)	112
6.4	Viscosity	113
	References to chapter 6	118
7	Dispersions	119
7.1	Solutions	119
7.2	Fluid dispersions	123
7.3	Solid dispersions	138
7.4	Gas dispersions. Two phase systems involving gas	145
	References to chapter 7	151
8	Thermoplastic materials with limited elasticity (thermoplastics)	153
8.1	Linear polymers	153
8.2	Resins	188
8.3	Asphalts	190
	References to chapter 8	196
9	Elastomeric materials (rubbers)	198
9.1	Rubber-like elasticity	198
9.2	The chemical structure of rubber and its changes during vulcanization	199
9.3	The elastic behaviour of rubber	204
9.4	The plastic behaviour of rubber	227

	9.5 Thermodynamics of rubber	<i>page</i> 234
	9.6 Chemical constitution and mechanical properties	240
	9.7 Composition of different elastomers	242
	References to chapter 9	249
10	Fibres	251
	10.1 Introduction	251
	10.2 Morphology of fibres	252
	10.3 Importance of crystallinity	253
	10.4 Chemical constitution	253
	10.5 Spinning	263
	10.6 Mechanism of spinning	266
	10.7 Drawing and stretching	269
	10.8 Mechanical properties	271
	10.9 Creep, primary and secondary	284
	10.10 Dynamic tests	286
	10.11 Strength of glass fibres	287
	10.12 Fibre friction	288
	References to chapter 10	290
11	Glasses and glass-ceramic materials	291
	11.1 Glasses	291
	11.2 Glass-ceramic materials	318
	References to chapter 11	330
12	Thermohardening resins	332
	12.1 Internal structure	332
	12.2 Elastic properties	334
	12.3 Plastic properties	338
	References to chapter 12	340
13	Deformation of crystalline solids	341
	13.1 Crystal structure	341

13.2	Elasticity of crystals	<i>page</i> 347
13.3	Role of dislocations in plastic deformation	352
13.4	Motion of dislocations	361
13.5	Strain hardening	367
13.6	Strengthening by chemical additions	372
13.7	Roles of grain boundaries	374
13.8	Twinning	376
13.9	Strengthened metals	378
13.10	Fracture .	380
13.11	Mechanisms of fracture	384
13.12	Ductile-brittle transition	387
13.13	Summary	389
	References to chapter 13	390
14	Bakers' dough	391
14.1	The role of dough properties in the breadmaking process	391
14.2	Dough structure	392
14.3	Wheat proteins	393
14.4	General description of the rheological properties of dough	394
14.5	The role of cross-links in gluten	395
	References to chapter 14	401
15	Paints and lacquers	403
15.1	Introduction	403
15.2	Rheology of liquid paints	404
15.3	Mechanical properties of paint coats	407
	References to chapter 15	411
16	Clay	412
16.1	Structure of clay particles	412
16.2	Structure and microrheology of clay-water mixtures	415
16.3	Phenomenological rheology of clays	428
	References to chapter 16	435

17	Miscellaneous substances	<i>page</i> 438
17.1	Gelatin and glue	438
17.2	Creams, pastes and jellies	443
17.3	Rheology of soaps	446
17.4	Sulphur	449
	References to chapter 17	453
	Index	455
