|----------|--|------------|
| 1 | The polysaccharides: sources and structures | 1 |
| 1.1 | An overview on polysaccharides | 1 |
| 1.1.1 | The building units | 2 |
| 1.1.2 | The building linkages | 6 |
| 1.1.3 | Polysaccharide shapes | 13 |
| 1.2 | Polysaccharides: biopolymers from renewable sources | 17 |
| 1.2.1 | Polysaccharides from plants | 17 |
| 1.2.2 | Marine polysaccharides | 26 |
| 1.2.3 | Microbial polysaccharides | 32 |
| 1.2.4 | Polysaccharides from animals | 44 |
| 1.3 | Syntheses and modifications of polysaccharides | 46 |
| 1.3.1 | Chemical and enzymatic techniques | 47 |
| 1.3.2 | Genetic engineering and advanced methodologies | 60 |
| 1.4 | Secondary and tertiary structure of polysaccharides in solutions and gels | 63 |
| 1.4.1 | Chains in solution | 63 |
| 1.4.2 | Order versus disorder: the gels | 83 |
| 1.4.3 | Liquid crystals | 94 |
| 1.4.4 | Experimental techniques for the investigation of higher order structures | 99 |
| | References | 118 |
| 2 | Industrial applications of polysaccharides | 134 |
| 2.1 | Polysaccharides as specialty chemicals | 134 |
| 2.1.1 | Polysaccharides in foods: function versus gum used | 135 |
| 2.1.2 | Pharmaceutical and medical applications | 138 |
| 2.1.3 | Polysaccharides for biotechnology, separatory products and laboratory aids | 141 |
| 2.1.4 | Other fields of industrial applications | 143 |
| 2.2 | Rheology in industrial research | 150 |
| | References | 156 |
| 3 | Rheology | 162 |
| 3.1 | Introduction | 162 |
| 3.2 | Basic concepts: tensional and deformation states | 164 |
| 3.2.1 | Tensional state | 165 |
| 3.2.2 | Deformation state | 168 |
| 3.3 | Basic principles for constitutive equations | 170 |

| | | |
|----------|---|------------|
| 3.4 | Constitutive equations and rheological characterization | 172 |
| 3.5 | Kinematic classification of flows | 176 |
| 3.5.1 | Shear flows | 176 |
| 3.5.2 | Elongational flows | 184 |
| 3.5.3 | Complex flows | 188 |
| 3.6 | Shear flow behavior | 190 |
| 3.7 | Elongational flow behavior | 211 |
| 3.8 | Rheological models | 214 |
| 3.8.1 | Generalized Newtonian fluids | 216 |
| 3.8.2. | Thixotropy and viscoelasticity | 219 |
| 3.8.3 | Linear viscoelastic models | 223 |
| 3.8.4 | General linear viscoelastic model | 229 |
| 3.8.5 | Corotational models | 230 |
| 3.8.6 | Molecular models | 235 |
| | References | 247 |
| 4 | Rheology of polysaccharide systems | 250 |
| 4.1 | Introduction | 250 |
| 4.2 | Dilute solutions | 253 |
| 4.2.1 | Steady shear viscosity | 255 |
| 4.2.2 | Normal stresses | 260 |
| 4.2.3 | Dynamic viscoelastic moduli | 262 |
| 4.2.4 | Modeling the shear dependence of η | 263 |
| 4.3 | Infinite dilution | 267 |
| 4.3.1 | Intrinsic viscosity | 267 |
| 4.3.2 | Determining $[\eta]$ from experimental data | 269 |
| 4.3.3 | Empirical correlations for $[\eta]_0$ | 273 |
| 4.3.4 | $[\eta]_0$ and molecular models | 281 |
| 4.3.5 | Modeling the shear dependence of $[\eta]$ | 288 |
| 4.3.6 | Intrinsic viscoelastic quantities | 296 |
| 4.4 | Temperature dependence of dilute solutions | 307 |
| 4.4.1 | Temperature dependence of shear viscosity | 307 |
| 4.4.2 | Temperature dependence of $[\eta]_0$ | 309 |
| 4.4.3 | Temperature dependence of the viscoelastic quantities: the method of reduced variables | 311 |
| 4.5 | From dilute to concentrated solutions | 312 |
| 4.6 | Concentrated solutions | 324 |
| 4.6.1 | Steady shear viscosity | 324 |
| 4.6.2 | Normal stresses | 338 |
| 4.6.3 | Time-dependent properties | 341 |
| 4.6.4 | Dynamic properties | 351 |
| 4.7 | From solutions to gels | 373 |
| 4.8 | Gels | 393 |
| 4.8.1 | Dynamic properties | 394 |
| 4.8.2 | Transient properties | 423 |

| | |
|--|------------|
| 4.8.3 Steady flow behavior | 436 |
| 4.9 Mixed gels | 438 |
| 4.10 Liquid crystals | 447 |
| 4.10.1 Phenomenological aspects | 452 |
| 4.10.2 Models for interpretation and correlation | 457 |
| 4.11 Polysaccharides in real systems | 460 |

| 5 Rheometry | 495 |
| 5.1 Introduction | 495 |
| 5.2 Qualitative rheometry | 498 |
| 5.2.1 The falling-ball viscometer | 499 |
| 5.2.2 Consistency cups (orifice viscometers) | 500 |
| 5.2.3 The Brookfield viscometer | 501 |
| 5.2.4 The Stormer-Krebs viscometer | 502 |
| 5.2.5 Penetrometers | 503 |
| 5.2.6 Viscographs and amylographs | 503 |
| 5.3 Quantitative rheometry | 504 |
| 5.4 Capillary rheometry | 507 |
| 5.5 Sources of error in capillary rheometry | 515 |
| 5.6 Rotational rheometers | 522 |
| 5.6.1 Cone-and-plate viscometers | 524 |
| 5.6.2 Plate-and-plate viscometers | 526 |
| 5.6.3 Coaxial cylinder viscometers | 528 |
| 5.7 Sources of errors in rotational rheometry | 539 |
| 5.8 Dynamic tests | 551 |
| 5.9 Sources of error in dynamic tests | 558 |
| 5.10 Extensional rheometry | 560 |
| 5.11 A brief survey of capillary and rotational instruments | 570 |
| 5.11.1 Capillary viscometers | 571 |
| 5.11.2 Rotational rheometers | 571 |
