Table of Contents

I Fundamentals 1

1 Introduction . . . 3

2 The one Degree of Freedom System . . . 7
- 2.1 Equation of Motion . . . 7
- 2.2 Natural Vibration . . . 8
- 2.3 Harmonic Excitation . . . 11
- 2.4 Random Excitation . . . 17

3 Shaft with Central Disc . . . 19
- 3.1 Shaft with Rigid Bearings, Jeffcott Rotor . . . 19
- 3.2 Startup, Run Down . . . 24
- 3.3 Jeffcott Rotor with Flexible Bearings . . . 29
- 3.4 Jeffcott Rotor with Bearing Damping . . . 33

4 Shaft with Non Central Disc . . . 37
- 4.1 Equations of Motion . . . 37
- 4.2 Natural Vibrations . . . 41
- 4.3 Unbalance Vibrations . . . 52
- 4.4 Harmonic Excitation in one Direction . . . 56
- 4.5 Shaft with Flexible Bearings . . . 59

5 The Short and the Long Rotor . . . 65
- 5.1 Unbalance Moment . . . 66
- 5.2 Natural Frequencies . . . 68
- 5.3 Unbalance Vibrations . . . 71

6 Oil–Film Bearings . . . 77
- 6.1 Hydrodynamic Bearing Theory . . . 77
- 6.2 Short Bearing Theory . . . 83
- 6.3 Static and Dynamic Properties . . . 89

7 Rotors with Oil–film Bearings . . . 97
- 7.1 Equations of Motion . . . 97

7.2 Stability 99
7.2.1 Rigid Rotor 99
7.2.2 The Jeffcott Rotor 104
7.3 Unbalance Vibrations 108
7.4 Summary 113

8 Vertical Rotors 115
8.1 Tilt–pad Bearings 115
8.2 Vibrations 123

9 Rolling–element Bearings 129
9.1 Deformation of the Rolling–element 130
9.2 Stiffness of Rolling–element Bearings 132
9.3 Lateral Stiffness, Critical Speeds 135
9.4 Consequences of Element Rotation 138
9.5 Damping of Rolling–element Bearings 140

10 Shaft Seals 143
10.1 Restoring Force 144
10.2 Jeffcott Rotor with Seals 146
10.3 Smooth Seals 152
10.4 Labyrinth Seals 156
10.5 Floating Ring Seals 157

11 Steam Whirl 161
11.1 The Steam Whirl Force 161
11.2 Jeffcott Rotor with Steam Whirl 164

12 Internal Damping 169
12.1 Jeffcott Rotor with Internal Viscous Damping 169
12.2 Damping due to the Shaft Material 174
12.3 Damping from Assembly Components 177
12.4 Conclusion and an Example 184

13 Non–circular Shafts 191
13.1 Non–circular Jeffcott Rotor 192
13.2 Supplementary Comments 199

II Rotors with Several Bearings 201

14 Computer Model 205

15 Influence Coefficients 207

16 Equation of Motion 211
16.1 Statics 211
16.2 Dynamics 217
16.2.1 Rigid Masses 217
16.2.2 Beam Element 221
16.2.3 Flexible Couplings 224
16.2.4 Bearing Supports 227
16.2.5 Shaft Seals, Steam Whirl 228
16.3 Reduction in the Number of Coordinates 228
16.4 Discussion of the Equation of Motion 230

17 Results 233
17.1 General Discussion of Natural Vibrations 233
17.2 Rotors with two Bearings 236
17.3 Rotors with Several Bearings 247

18 Static Bearing Loads 255

III Rotor–foundation Coupling 257

19 Foundation 261
19.1 Calculations 262
19.1.1 Ground Dynamics 262
19.1.2 Rigid Foundation Block 266
19.1.3 Flexible Foundation 269
19.2 Results 277
19.2.1 Rigid Foundation 277
19.2.2 Frame Foundation 283
19.2.3 Table Foundation 283
19.2.4 Spring Foundation 287
19.2.5 Reinforced Concrete and Steel 287

20 Rotor and Foundation 293
20.1 Calculations 294
20.2 Results 296
20.2.1 Small Machine Sets with Frame Foundations 298
20.2.2 Large Turbine Sets 305
20.2.3 Conclusion 311

IV Further Features 315

21 Rough Calculations 317
21.1 Natural Frequencies and Critical Speeds 317

21.2 Resonance Amplitudes 322

22 Bending Stresses in Rotors 325

23 Cracked Rotors 329
23.1 Vibrations of a Rotor with a Transverse Crack 329
23.1.1 Jeffcott Rotor 329
23.1.2 General Rotor 334
23.1.3 Results 335
23.2 Case Studies 342
23.3 Summary 345

24 Solution of the Equation of Motion 349
24.1 Homogeneous Equation, Natural Frequencies 349
24.2 Harmonic Excitation 353
24.3 General Excitation 353
24.4 Modal Method of Calculation 353
24.4.1 Symmetric Matrices 354
24.4.2 Harmonic Excitation 356
24.4.3 Reduced Modal Calculation 358
24.4.4 Transfer Function 360
24.4.5 Unsymmetric Matrices 360
24.5 Rayleigh Quotient 362

25 Program MADYN 365
25.1 Review 365
25.2 Building the Model 367
25.3 Eigenvalue Algorithm 368
