# CONTENTS

## I. Introduction

page

1. Limitations of the Classical Theory of Navier and Stokes . . . 1
2. Incompressible Simple Fluids . . . 5
3. Plan and Scope of this Monograph . . . 7

## II. Theory of Incompressible Simple Fluids

4. Kinematics . . . 10
5. The Dynamical Equations . . . 12
6. The Principle of Material Objectivity . . . 14
7. The Definition of an Incompressible Simple Fluid . . . 17
8. Static Behavior of Simple Fluids . . . 19

## III. General Theory of Viscometric Flows

9. The Kinematics of Simple Shearing Flow . . . 21
10. The Viscometric Functions . . . 22
11. The Dynamics of Simple Shearing Flow; Viscosity . . . 26
12. The Definition of a Viscometric Flow . . . 29
13. Curvilineal Flows . . . 30
    i. Kinematical Description . . . 30
    ii. Calculation of the Stress Tensor . . . 32

## IV. Special Viscometric Flows

14. Flow through a Channel . . . 34
15. General Properties of Helical Flows . . . 37
16. Flows between Concentric Cylinders . . . 39
17. Couette Flow . . . 41
18. Flow between Stationary Concentric Cylinders . . . 44
19. Poiseuille Flow . . . 45
20. Normal Stress Effects at Free Boundaries . . . 47
    i. Climbing in Couette Flow . . . 47
    ii. Swelling in Poiseuille Flow . . . 48
21. Cone and Plate Flow . . . 50
22. Torsional Flow . . . 52

## V. Experimental Methods and Results

23. General Considerations . . . 56
    i. The Adherence Condition . . . 57
    ii. Heat Generation . . . 59
    iii. The Sample . . . 59
24. Simple Shearing Flow . . . 60

page
25. Couette Flow . . . . . 60
i. The Velocity Field . . . . . 60
ii. Viscosity . . . . . 61
iii. Normal Stresses . . . . . 64
iv. Climbing . . . . . 67
26. Other Flows between Coaxial Cylinders . . . . . 67
27. Poiseuille Flow . . . . . 68
i. The Velocity Field . . . . . 68
ii. Viscosity . . . . . 68
iii. Swelling . . . . . 71
28. Cone and Plate Flow . . . . . 72
i. The Velocity Field . . . . . 72
ii. Viscosity . . . . . 73
iii. Normal Stresses . . . . . 75
29. Torsional Flow . . . . . 79
i. Viscosity . . . . . 79
ii. Normal Stresses . . . . . 79

## VI. Historical Remarks

30. History of the Development of the Theory . . . . . 84
31. History of Experiments . . . . . 88

## A. Appendix on Mathematical Concepts

A 1. Vectors . . . . . 93
A 2. Bases, Linear Forms . . . . . 94
A 3. Points, Euclidean Space . . . . . 96
A 4. Tensors . . . . . 97
A 5. Multiplication of Tensors . . . . . 99
A 6. Transposition; Symmetric, Skew, and Orthogonal Tensors . . . 100
A 7. Traces and Determinants . . . . . 101
A 8. Point, Vector, and Tensor Functions . . . . . 103
A 9. Deformations, Gradients . . . . . 104
A 10. Coordinates . . . . . 106
A 11. Special Coordinate Systems . . . . . 107
