Preface

PART I

1.	Definitions and Basic Relations	1-32
2.	The Energy Equation	33-50
2.1	Energy equation for a non-flow process	33
2.2	Energy equation for a flow process	34
2.3	The adiabatic energy equation	35
2.4	Stagnation velocity of sound	36
2.5	Stagnation pressure	37
2.6	Stagnation density	37
2.7	Stagnation state	37
2.8	Various regions of flow	37
2.9	Reference velocities	39
2.10	Bernoulli equation	43
2.11	Effect of Mach number on compressibility	44
3.	Rate Equations for a Control Volume	51-59
3.1	Continuity equation (conservation of mass)	51
3.2	Momentum equation (conservation of momentum)	53
3.3	Moment of momentum equation	55
3.4	Energy equation (conservation of energy)	56
3.5	Entropy equation	57
4.	Isentropic Flow with Variable Area	60-88
4.1	Comparison of isentropic and adiabatic processes	60
4.2	Mach number variation	63
4.3	Stagnation and critical states	66
4.4	Area ratio as function of Mach number	68
4.5	Impulse function (F)	69
4.6	Mass flow rate	71

4.7	Flow through nozzles	75	
4.8	Flow through diffusers	80	
4.9	Use of gas tables	81	
5.	Wave Motion		89-116
5.1	Wave propagation in an elastic solid medium	89	
5.2	Propagation of infinitesimal waves (Sound waves)	90	
5.3	Non-steep finite pressure waves	99	
5.4	Steep finite pressure waves	103	
5.5	Expansion waves	109	
6.	Flow with Normal Shock Waves		117-153
6.1	Development of a shock wave	117	
6.2	Rarefaction waves	119	
6.3	The governing equations	120	
6.4	Prandtl-Meyer relation	123	
6.5	Mach number downstream of the normal shock wave	124	
6.6	Static pressure ratio across the shock	125	
6.7	Temperature ratio across the shock	126	
6.8	Density ratio across the shock (the Rankine-Hugoniot equations)	127	
6.9	Stagnation pressure ratio across the shock	129	
6.10	Change in entropy across the shock	130	
6.11	Impossibility of a shock in subsonic flow	132	
6.12	Strength of a shock wave	133	
6.13	Determination of Mach number of supersonic flows	134	
6.14	Tables and charts for normal shock waves	136	
6.15	Supersonic wind tunnels	136	
6.16	Moving normal shock waves	141	
7.	Flow with Oblique Shock Waves		154-192
7.1	Nature of flow through oblique shock waves	156	
7.2	Fundamental Relations	158	
7.3	Prandtl's equation	161	
7.4	Rankine-Hugoniot Equation	162	
7.5	Variation of flow parameters	163	
7.6	Oblique shock relations from the normal shock equations	168	
7.7	Mach waves	169	
7.8	Gas tables for oblique shocks	170	
7.9	Charts for oblique shocks	171	
7.10	The shock polar diagram	174	
7.11	Expansion of supersonic flow	181	

8. Flow in Constant Area Ducts with Friction	193-223
8.1 The Fanno curves 193	
8.2 Fanno flow equations 196	
8.3 Solution of Fanno flow equations 199	
8.4 Variation of flow properties 201	
8.5 Variation of Mach number with duct length 204	
8.6 Tables for Fanno flow 205	
8.7 Charts for Fanno flow 205	
8.8 Isothermal flow with friction 207	
9. Flow in Constant Area Ducts with Heat Transfer	224-242
9.1 The Rayleigh line 224	
9.2 Fundamental equations 229	
9.3 Rayleigh flow relations 231	
9.4 Variation of flow properties 233	
9.5 Maximum heat transfer 234	
9.6 Tables for Rayleigh flow 236	
9.7 Charts for Rayleigh flow 236	
PART II	
10. Multidimensional Flow	245-279
10.1 Cartesian coordinate system 245	
10.2 Cylindrical Coordinate system 255	
10.3 Potential function 267	
10.4 Stream function 272	
11. Methods of Measurement	280-334
11.1 Pressure measurement 280	
11.2 Temperature 286	
11.3 Density 291	
11.4 Velocity 291	
11.5 Hot-wire anemometer 295	
11.6 Direction of flow 299	
11.7 Flow rate 301	
11.8 Wind tunnels 309	
11.9 Flow visualization 320	
11.10 Optical methods 321	
<i>Appendices</i>	335
<i>Bibliography</i>	351
<i>Index</i>	353
