

## CONTENTS

<b>Preface</b>	vii
<b>Acknowledgements</b>	ix
<b>Abbreviations used in Lists of References</b>	xi
<b>I. Introduction</b>	1
<b>II. General Principles of the Pressure-tube Anemometer</b>	6
<b>III. The Characteristics of Pitot and Static Tubes in Incompressible Flow</b>	22
<b>IV. Pitot and Static Observations in Compressible Flow</b>	57
<b>V. The Flow of Air in Pipes of Circular Cross-section</b>	75
<b>VI. The Measurement of Incompressible Flow in Pipes by Pitot and Static Traverse Methods</b>	112
<b>VII. The Plate Orifice, Shaped Nozzle, and Venturi Tube</b>	148
<b>VIII. The Vane Anemometer</b>	197
<b>IX. Methods of Flow Measurement Based upon the Rates of Cooling of Hot Bodies</b>	228
<b>X. Manometers</b>	248
<b>XI. Miscellaneous Methods of Flow Measurement</b>	279
<b>XII. The Measurement of Pulsating Flow</b>	310
<b>XIII. Examples from Practice</b>	324
<b>Appendix 1. Metric Units</b>	343
<b>Appendix 2. Numerical Evaluation of Non-dimensional Quantities</b>	347
<b>Appendix 3. Standard Atmospheric Properties at Sea-level</b>	349
<b>Name Index</b>	351
<b>Subject Index</b>	355
