

	Preface	xi
	List of Symbols	xv
Chapter 1	The Wave Theory of Sound	1
1-1	A Little History	3
1-2	The Conservation of Mass	6
1-3	Euler's Equation of Motion for a Fluid	8
1-4	Pressure-Density Relations	11
1-5	Equations of Linear Acoustics	14
1-6	The Wave Equation	17
1-7	Plane Traveling Waves	20
1-8	Waves of Constant Frequency	24
1-9	Speed of Sound and Ambient Density	28
1-10	Adiabatic versus Isothermal Sound Speeds	34
1-11	Acoustic Energy, Intensity, and Source Power	36
1-12	Spherical Waves	41
	Problems	47
Chapter 2	Quantitative Measures of Sound	54
2-1	Frequency Content of Sounds	54
2-2	Proportional Frequency Bands	57
2-3	Levels and the Decibel	60
2-4	Frequency Weighting and Filters	66
2-5	Combining of Levels	69
2-6	Mutually Incoherent Sound Sources	72
2-7	Fourier Series and Long-Duration Sounds	74
2-8	Transient Waveforms	78
2-9	Transfer Functions	82
2-10	Stationary Ergodic Processes	85
2-11	Bias and Variance	89
	Problems	94

Chapter 3	Reflection, Transmission, and Excitation of Plane Waves	100
3-1	Boundary Conditions at Impenetrable Surfaces	100
3-2	Plane-Wave Reflection at a Flat Rigid Surface	104
3-3	Specific Acoustic Impedance	107
3-4	Radiation of Sound by a Vibrating Piston within a Tube	113
3-5	Sound Radiation by Traveling Flexural Waves	122
3-6	Reflection and Transmission at an Interface between Two Fluids	130
3-7	Multilayer Transmission and Reflection	137
3-8	Transmission through Thin Solid Slabs, Plates, and Blankets	140
	Problems	148
Chapter 4	Radiation from Vibrating Bodies	153
4-1	Radially Oscillating Sphere	153
4-2	Transversely Oscillating Rigid Sphere	156
4-3	Monopoles and Green's Functions	159
4-4	Dipoles and Quadrupoles	165
4-5	Uniqueness of Solutions of Acoustic Boundary-Value Problems	171
4-6	The Kirchhoff-Helmholtz Integral Theorem	180
4-7	Sound Radiation from Small Vibrating Bodies	183
4-8	Radiation from a Circular Disk	191
4-9	Reciprocity in Acoustics	195
4-10	Transducers and Reciprocity	199
	Problems	203
Chapter 5	Radiation from Sources Near and on Solid Surfaces	208
5-1	Sources near Plane Rigid Boundaries	208
5-2	Sources Mounted on Walls: The Rayleigh Integral; Fresnel-Kirchhoff Theory of Diffraction by an Aperture	213
5-3	Low-Frequency Radiation from Sources Mounted on Walls	217
5-4	Radiation Impedance of Baffled-Piston Radiators	220
5-5	Far-Field Radiation from Localized Wall Vibrations	225
5-6	Transient Solution for Baffled Circular Piston	227
5-7	Field on and near the Symmetry Axis	231
5-8	Transition to the Far Field	234
	Problems	245
Chapter 6	Room Acoustics	250
6-1	The Sabine-Franklin-Jaeger Theory of Reverberant Rooms	251
6-2	Some Modifications	260
6-3	Applications of the Sabine-Franklin-Jaeger Theory	270
6-4	Coupled Rooms and Large Enclosures	277
6-5	The Modal Theory of Room Acoustics	284

6-6	High-Frequency Approximations	291
6-7	Statistical Aspects of Room Acoustics	297
6-8	Spatial Correlations in Diffuse Sound Fields	305
	Problems	310
Chapter 7	Low-Frequency Models of Sound Transmission	313
7-1	Guided Waves	313
7-2	Lumped-Parameter Models	319
7-3	Guidelines for Selecting Lumped-Parameter Models	324
7-4	Helmholtz Resonators and Other Examples	330
7-5	Orifices	336
7-6	Estimation of Acoustic Inertances and End Corrections	341
7-7	Mufflers and Acoustic Filters	350
7-8	Horns	357
	Problems	365
Chapter 8	Ray Acoustics	371
8-1	Wavefronts, Rays, and Fermat's Principle	371
8-2	Rectilinear Sound Propagation	379
8-3	Refraction in Inhomogeneous Media	384
8-4	Rays in Stratified Media	388
8-5	Amplitude Variation along Rays	396
8-6	Wave Amplitudes in Moving Media	400
8-7	Source above an Interface	408
8-8	Reflection from Curved Surfaces	413
	Problems	419
Chapter 9	Scattering and Diffraction	424
9-1	Basic Scattering Concepts	425
9-2	Monostatic and Bistatic Scattering-Measurement Configurations	439
9-3	The Doppler Effect	451
9-4	Acoustic Fields near Caustics	460
9-5	Shadow Zones and Creeping Waves	469
9-6	Source or Listener on the Edge of a Wedge	479
9-7	Contour-Integral Solution for Diffraction by a Wedge	481
9-8	Geometrical-Acoustic and Diffracted-Wave Contributions for the Wedge Problem	486
9-9	Applications of Wedge-Diffraction Theory	495
	Problems	501
Chapter 10	Effects of Viscosity and Other Dissipative Processes	508
10-1	The Navier-Stokes-Fourier Model	508
10-2	Linear Acoustic Equations and Energy Dissipation	515
10-3	Vorticity, Entropy, and Acoustic Modes	519

10-4	Acoustic Boundary-Layer Theory	523
10-5	Attenuation and Dispersion in Ducts and Thin Tubes	531
10-6	Viscosity Effects on Sound Radiation	538
10-7	Relaxation Processes	547
10-8	Absorption of Sound Problems	555
		562
Chapter 11	Nonlinear Effects in Sound Propagation	566
11-1	Nonlinear Steepening	566
11-2	Generation of Harmonics	571
11-3	Weak-Shock Theory	574
11-4	N Waves and Anomalous Energy Dissipation	579
11-5	Evolution of Sawtooth Waveforms	582
11-6	Nonlinear Dissipative Waves	587
11-7	Transition to Old Age	594
11-8	Nonlinear Effects in Converging and Diverging Waves	597
11-9	N Waves in Inhomogeneous Media; Spherical Waves	603
11-10	Ballistic Shocks; Sonic Booms Problems	606
		615
	Indexes	619
	Name Index	
	Subject Index
