Preface v

CHAPTER 1 Introduction 1

CHAPTER 2 Penetration of Primary Electrons into Crystals 3

CHAPTER 3 Excitation of Activator Ions by Incident Radiation 17
3.1 Luminescence Intensity Measurements 17
3.2 Activator Distribution in Crystals 18
3.3 Direct Excitation of Activator Ions by Photons 19
3.4 Direct Excitation of Activator Ions by Electron Beam 27
3.5 Indirect Excitation of Activator Ions Through Recombination of Mobile Carriers 29
3.6 Classification of Activator Ions According to Excitation Mechanisms 33

CHAPTER 4 Motion of Mobile Carriers in Crystals 39
4.1 Quasi-One-Directional Migration of EHs 43
4.2 Pulse Width Effect on C^* 45
4.3 Lifetime of the Excited Activator Ions 45
4.4 Number of Activator Ions in Domains 47
4.5 Random Sampling of Domains by EHs 48
4.6 Correlated Migration of EHs 49
4.7 Nature of the Carriers 50
4.8 A Proposed Model of Cathodoluminescence 51

CHAPTER 5 Energy Conversion of Electrons Penetrated into Phosphor Crystals 53
5.1 Excitation without Replacement 59
5.2 Excitation with Replacement 59

CHAPTER 6 Optimization of Cathodoluminescence Phosphors 67
6.1 Is Charge Transfer Band Necessary? 67
6.2 Optimum Activator Concentrations 70
6.2.1 Theoretical optimum activator concentrations 70
6.2.2 Practical optimum activator concentrations 74

6.3 Crystal Perfection: Use of Internal Reference in Cathodoluminescence Study 80
6.3.1 Determination of internal reference 81
6.3.2 Accuracy and precision of $<I>$ measurements 81
6.3.3 Slopes of RCI curves 84
6.3.4 Role of crystal perfection 86
6.4 The Best Phosphor Crystal is Microcrystalline 88

CHAPTER 7 Application of Phosphors to Picture Tubes 103
7.1 Optimum Arrangement of Phosphor Particles in Cathode-ray Picture Tube Screens 104
7.1.1 Optical properties of the turbid screen 104
7.1.2 Particle size distribution of phosphors 108
7.1.3 Geometric arrangement of particles in the screen 111
7.1.3.1 Specific surface area of particles 111
7.1.3.2 The number of phosphor layers 112
7.1.3.3 Light out from a multilayered screen 113
7.1.4 Phosphors and screening preparations 114
7.1.5 Optimum number of phosphor particle layers 116
7.1.6 Demonstration of the significance of L 117
7.2 Photochemistry of Ammonium Dichromate in Polyvinyl Alcohol Solutions 120
7.2.1 Acid-base equilibrium species in AD-H_2O solutions 121
7.2.2 Photochemistry of PVA-AD solutions 123
7.3 Brightness of Phosphor Screens of Color TV Tubes 129
7.4 Screenability of Phosphor Powder 131
7.4.1 Determination of particle sizes 131
7.4.2 Shape of phosphor particles 134
7.4.3 Screening of microcrystals 135
7.4.4 Screening of round crystals 136
7.4.5 Screening of mixed crystals 138
7.5 Hysteresis in the Voltage Dependence of Cathodoluminescence 138
7.5.1 Application of hysteresis to storage tubes 141
7.5.2 Application to x-ray image formation 145
7.6 Measurement of Cathodoluminescence Intensities on Phosphor Screens 150
7.6.1 The problem 150
7.6.2 Multiexcitation effects in Raster excitation 153
7.6.3 Determination of beam density 156
7.6.4 Sublinear dependence of $<I>$ on beam density 158

CHAPTER 8 Rare Earth Phosphors 163
8.1 Rare Earth-Activated Phosphors 164
8.2 γ-Ray-Induced Thermoluminescence from Y_2O_3 188
8.3 Evidence of Energy Transfer from Pair Gd Ions to Other RE^{+3} 193
8.4 Analytical Application of RE^{+3} Luminescence in Y_2O_3 and in Y_2O_2S:Eu 201
8.5 Green-Emitting Rare Earth Phosphors 210

CHAPTER 9 II-VI Compound Phosphors 221
9.1 ZnSe Single Crystals 221
9.2 ZnS Phosphors 237
9.2.1 Outline of ZnS phosphors 237
9.2.2 Donor-acceptor pair recombination centers of electrons and holes 241
9.2.3 Application of sulfide phosphors to TV picture tube screens 247

CHAPTER10 Characteristic Properties of ZnO 255
10.1 Cathodoluminescence 255
10.2 Electrophotography 261
10.3 Varistors 265
10.4 Piezoelectricity 270
10.5 Gas Sensors and Catalysts 281
10.6 Concluding Remarks 290

Afterword 293
Index 301
