

Contents

1. <i>Introduction</i>	1
2. <i>Absorption and Emission of Light</i>	6
2.1 Cavity Modes	7
2.2 Thermal Radiation and Planck's Law	10
2.3 Absorption, Induced and Spontaneous Emission	13
2.4 Basic Photometric Quantities	17
2.5 Discrete and Continuous Spectra	22
2.6 Absorption and Dispersion	26
2.6.1 Classical Model of the Refractive Index	27
2.6.2 Oscillator Strengths and Einstein Coefficients	31
2.7 Transition Probabilities	35
2.7.1 Lifetimes and Spontaneous Transition Probabilities ..	36
2.7.2 Experimental Methods for the Determination of Transition Probabilities	38
2.8 Linear and Nonlinear Absorption	42
2.9 Semiclassical Description	46
2.9.1 Basic Equations	47
2.9.2 Transition Probabilities with Broad-Band Excitation .	50
2.9.3 Phenomenological Inclusion of Decay Phenomena	52
2.9.4 Interaction with Strong Fields	54
2.9.5 Transition Probabilities and Line Strengths	58
2.9.6 Intensity and Polarization of Spectral Lines	60
2.9.7 Molecular Transitions	63
2.10 Coherence	65
2.10.1 Temporal Coherence	66
2.10.2 Spatial Coherence	67
2.10.3 Coherence Volume	69
2.10.4 The Mutual Coherence Function and the Degree of Coherence	71

3. <i>Widths and Profiles of Spectral Lines</i>	78
3.1 Natural Linewidth	79
3.2 Doppler Width	84
3.3 Collision Broadening of Spectral Lines	89
3.4 Time-of-Flight Broadening	99
3.5 Homogeneous and Inhomogeneous Line Broadening	102
3.6 Saturation Broadening	104
3.6.1 Homogeneous Saturation	104
3.6.2 Saturation of Inhomogeneous Line Profiles	105
3.7 Spectral Line Profiles in Liquids and Solids	110
4. <i>Spectroscopic Instrumentation</i>	115
4.1 Spectrographs and Monochromators	116
4.1.1 Basic Properties	118
4.1.2 Prism Spectrometer	128
4.1.3 Grating Spectrometer	131
4.2 Interferometer	138
4.2.1 Basic Concepts	138
4.2.2 Michelson Interferometer	141
4.2.3 Fourier-Transform Spectroscopy	145
4.2.4 Mach-Zehnder Interferometer	149
4.2.5 Multiple Beam Interference	152
4.2.6 Etalons	159
4.2.7 Multilayer Dielectric Coatings	160
4.2.8 Interference Filters	165
4.2.9 Plane Fabry-Perot Interferometer	167
4.2.10 Confocal Fabry-Perot Interferometer	172
4.2.11 Lyot Filter	177
4.2.12 Tunable Interferometers	181
4.3 Comparison Between Spectrometers and Interferometers	182
4.3.1 Spectral Resolving Power and Light-Gathering Power ..	182
4.3.2 Precision and Accuracy of Wavelength Measurements ...	187
4.4 New Techniques of Wavelength Measurements	190
4.5 Detection of Light	195
4.5.1 Thermal Detectors	197
4.5.2 Photoemissive Detectors	202
4.5.3 Photocells and Photomultipliers	204
4.5.4 Photon Counting	209

4.5.5	Photoelectric Image Intensifiers	211
4.5.6	Photoconductors	214
4.5.7	Photovoltaic Detectors	216
4.5.8	Photodiodes	218
4.5.9	Optical Multichannel Analyzer	221
4.5.10	Measurements of Fast Transient Events	223
4.6	Conclusions	227
	Problems to Chapter 4	228
5.	<i>Fundamental Principles of Lasers</i>	231
5.1	Basic Elements of a Laser	231
5.2	Threshold Condition	232
5.3	Optical Resonators	234
5.4	Spatial Field Distributions in Open Resonators	238
5.5	Frequency Spectrum of Passive Resonators	245
5.6	Active Resonators and Laser Modes	248
5.7	Gain Saturation and Mode Competition	252
5.8	Spatial Hole Burning	256
5.9	Output Power and Optimum Output Coupling	258
5.10	Ring Lasers	263
5.11	Gaussian Beams	264
6.	<i>Lasers as Spectroscopic Light Sources</i>	272
6.1	Advantages of Lasers in Spectroscopy	272
6.2	Fixed-Frequency Lasers and Tunable Lasers	274
6.3	Frequency Spectrum of Multimode Lasers	278
6.4	Mode Selection in Lasers	282
6.5	Experimental Realization of Single-Mode Lasers	286
6.6	Wavelength Stabilization	291
6.7	Intensity Stabilization	303
6.8	Controlled Wavelength Tuning	305
6.9	Wavelength Calibration	310
6.10	Absolute Laser-Frequency Measurements	312
6.11	Linewidths of Single-Mode Lasers	315
	Problems to Chapter 6	319
7.	<i>Tunable Coherent Light Sources</i>	321
7.1	Basic Concepts	321

7.2	Tunable Infrared Lasers	324
7.2.1	Semiconductor Diode Lasers	324
7.2.2	Spin-Flip Raman Lasers (SFRL).....	328
7.2.3	Tunable Infrared Gas Lasers	330
7.2.4	Color Center Lasers	333
7.3	Dye Lasers	337
7.3.1	Physical Background	337
7.3.2	Laser-Pumped Pulsed Dye Lasers	340
7.3.3	Flashlamp-Pumped Dye Lasers	344
7.3.4	Continuous Wave Dye Lasers	346
7.3.5	Ring Dye Lasers	349
7.4	Excimer Lasers	353
7.5	Nonlinear Optical Mixing Techniques	357
7.5.1	Physical Background	357
7.5.2	Second Harmonic Generation (SHG).....	361
7.5.3	Sum Frequency and Higher Harmonic Generation	364
7.5.4	Difference Frequency Spectrometer	368
7.6	Optical Parametric Oscillator (OPO)	369
7.7	Tunable Raman Lasers	372
8.	<i>Doppler-Limited Absorption and Fluorescence Spectroscopy with Lasers</i>	375
8.1	Introduction	375
8.2	High-Sensitivity Detection Methods	379
8.2.1	Excitation Spectroscopy	381
8.2.2	Photoacoustic Spectroscopy	384
8.2.3	Intracavity Absorption	389
8.2.4	Optogalvanic Spectroscopy	394
8.2.5	Ionization Spectroscopy	397
8.3	Laser Magnetic Resonance and Stark Spectroscopy	400
8.3.1	Laser Magnetic Resonance	400
8.3.2	Stark Spectroscopy	402
8.4	Comparison Between the Different Methods	404
8.5	Examples for Doppler-Limited Absorption Spectroscopy with Lasers	405
8.6	Optical Pumping with Lasers	409
8.7	Laser-Induced Fluorescence	416
8.7.1	Molecular Spectroscopy by Laser-Induced Fluorescence ..	416
8.7.2	Measurements of Internal State Distributions	420

8.8	Spectroscopy of Excited States	423
8.8.1	Stepwise Excitation	423
8.8.2	Spectroscopy of Rydberg States	424
8.9	Double-Resonance Methods	427
8.9.1	Optical-Radio-Frequency Double Resonance	427
8.9.2	Microwave-Infrared Double Resonance	430
8.9.3	Optical Microwave Double Resonance	432
8.9.4	Optical-Optical Double Resonance	433
8.10	Multiphoton Spectroscopy	435
8.10.1	Transition Probability of Two-Photon Transitions ...	436
8.10.2	Applications of Multiphoton Absorption to Atomic and Molecular Spectroscopy	440
8.10.3	Multiphoton-Ionization Spectroscopy	441
9.	<i>Laser Raman Spectroscopy</i>	442
9.1	Basic Considerations	442
9.2	Stimulated Raman Scattering	446
9.3	Coherent Anti-Stokes Raman Spectroscopy (CARS)	450
9.4	Hyper-Raman Effect	453
9.5	Experimental Techniques of Laser Raman Spectroscopy	454
9.6	Applications of Laser Raman Spectroscopy	458
10.	<i>High-Resolution Sub-Doppler Laser Spectroscopy</i>	461
10.1	Spectroscopy in Collimated Molecular Beams	462
10.1.1	Reduction of Doppler Width	463
10.1.2	Laser Spectroscopy in Supersonic Beams	467
10.1.3	Laser Spectroscopy in Fast Ion Beams	473
10.1.4	Optical Pumping in Molecular Beams	476
10.1.5	Optical-Optical Double-Resonance Spectroscopy in Molecular Beams	477
10.1.6	Radio-Frequency Spectroscopy in Molecular Beams	481
10.2	Saturation Spectroscopy	484
10.2.1	Basic Concepts	485
10.2.2	Doppler-Free Saturation Spectroscopy	488
10.2.3	Lamb Dip Stabilization of Gas Lasers	495
10.2.4	Saturation Spectroscopy of Coupled Transitions	500
10.3	Polarization Spectroscopy	504
10.3.1	Basic Principle	505
10.3.2	Line Profiles of Polarization Signals	507

10.3.3	Magnitude of Polarization Signals	510
10.3.4	Sensitivity of Polarization Spectroscopy	513
10.3.5	Polarization Labelling Spectroscopy	516
10.3.6	Advantages of Polarization Spectroscopy	517
10.3.7	Doppler-Free Laser-Induced Dichroism and Birefringence	518
10.4	Saturated Interference Spectroscopy	520
10.5	Heterodyne Spectroscopy	523
10.6	Doppler-Free Multiphoton Spectroscopy	525
10.6.1	Basic Principle	526
10.6.2	Line Profiles of Two-Photon Transitions	528
10.6.3	Examples	531
10.7	Level-Crossing Spectroscopy with Lasers	535
10.7.1	Basic Principle	535
10.7.2	Experimental Realization and Examples of Level- Crossing Spectroscopy with Lasers	541
10.7.3	Stimulated Level-Crossing Spectroscopy	543
11.	<i>Time-Resolved Laser Spectroscopy</i>	546
11.1	Generation of Short Laser Pulses	547
11.2	Lifetime Measurements with Lasers	555
11.2.1	Phase Shift Method	556
11.2.2	Pulse Excitation	558
11.2.3	Delayed Coincidence Technique	559
11.2.4	Lifetime Measurements in Fast Atomic Beams	561
11.3	Picosecond Spectroscopy	563
11.4	Coherent Transients and Pulse Fourier Transform Spectroscopy	567
11.4.1	Quantum Beat Spectroscopy	568
11.4.2	Photon Echoes	572
11.4.3	Optical Nutation and Free Induction Decay	579
11.4.4	Pulse Fourier Transform Spectroscopy	582
12.	<i>Laser Spectroscopy of Collision Processes</i>	585
12.1	High-Resolution Laser Spectroscopy of Collisional Line Broadening and Line Shifts	586
12.2	Measurement of Inelastic Collisions by LIF	590
12.3	Study of Energy-Transfer Processes in Electronic Ground States	596

12.4	Measurements of Differential Cross Sections in Crossed Molecular Beams	603
12.5	Light-Induced Collisional Energy Transfer	607
13.	<i>The Ultimate Resolution Limit</i>	610
13.1	Optical Ramsay Fringes	611
13.1.1	Two-Photon Ramsay Resonances	614
13.1.2	Nonlinear Ramsay Fringes Using Three Separated Fields	617
13.2	Photon Recoil	619
13.3	Optical Cooling and Trapping of Atoms	622
13.3.1	Optical Cooling by Resonance Photon Recoil	622
13.3.2	Induced Dipole Forces	625
13.3.3	Trapping of Atoms in Optical Standing Wave Fields ..	627
13.4	Trapping and Cooling of Ions	629
13.5	Resolution Within the Natural Linewidth	632
14.	<i>Applications of Laser Spectroscopy</i>	640
14.1	Laser Photochemistry	640
14.2	Laser Isotope Separation	643
14.3	Laser Monitoring of the Atmosphere	645
14.4	Laser Spectroscopy in Biology	649
14.4.1	Laser Microscope	649
14.4.2	Application of Laser Raman Spectroscopy to Biological Problems	651
14.5	Medical Applications of Laser Spectroscopy	652
