

Contents

About the Series	iii
Preface	v
Contributors	ix
1. Laser Properties and Beam Characteristics P. E. Dyer	1
2. Laser Beam Transport S. L. Chin	39
3. Parametric Dependencies and Interactions in Infrared Laser-Induced Photochemistry D. K. Evans, Robert D. McAlpine, and Michael Ivanco	63
4. Applied Laser Photochemistry in the Liquid Phase Terence Donohue	89
5. Laser Separation of Tritium Irving P. Herman, Kazuo Takeuchi, and Yoshihiro Makide	173
6. Multiphoton Ionization Photoelectron Spectroscopy: MPI-PES R. N. Compton and John C. Miller	221

7. The Spectroscopy of Transient Species in Supersonic Free Jet Expansions Stephen C. Foster and Terry A. Miller	307
8. Recent Progress in the Theory of Laser-Assisted Collisions Henk F. Arnoldus, Thomas F. George, Kai-Shue Lam, J. F. Scipione, Paul L. DeVries, and Jian-Min Yuan	329
9. Ultrafast Laser Spectroscopy and Chemical Events Geraldine Kenney-Wallace	377
Index	419
