535.58 MAI

CONTENTS

1. THE LASER . . . . . 1—24

1. Introduction 1
2. Conventional sources of line spectra 1
   2.1. Factors influencing line profile 1
   2.2. Factors influencing coherence 6
3. The optical cavity 8
4. Stimulated emission 14
5. Gain profile and threshold condition for homogeneously broadened transition 16
6. Spectral width of the laser oscillator 19
7. Mode pulling effects 20
8. Inhomogeneously broadened laser transition 21
9. Gain saturation 23

References 24

2. REVIEW OF RADIATION THEORY . . . . . 25—54

1. Introduction 25
2. Radiation in vacuum 25
   2.1. Intensity of radiation 25
   2.2. Flux of radiation 26
   2.3. Energy density of radiation 28
   2.4. Radiation pressure 29
   2.5. Radiative stress tensor 31
3. Radiation in a cavity 33
   3.1. Modes of oscillation in an enclosed cavity 33
   3.2. Blackbody radiation into a single transverse mode 35
   3.3. Number of photons emitted by a blackbody into a quantum state . . 37
4. Radiation and matter 37
   4.1. Mass absorption coefficient 37
   4.2. Atomic absorption coefficient 38
   4.3. Number of absorption processes per second 38
   4.4. Classical theory of emission 39
   4.5. Classical theory of atoms interacting with electromagnetic radiation . 40
   4.6. Differential Einstein coefficients 44

4.7. Einstein coefficients 47
4.8. Relation between the absorption coefficient and the Einstein coefficient 49
4.8.1. Photoexcitation cross-section 50
4.9. Lifetime of excited states 50
4.10. Refractive index and the dispersion relation 51
4.10.1. Phase shift and line shape. 53
References 54

3. RADIATION AND ATOMIC SYSTEMS . . . . . 55—92

1. Introduction 55
2. Basic postulates of quantum mechanics 56
3. Interactions between atoms and radiation 67
3.1. Two level atomic system. 67
3.2. Electromagnetic transitions in a two level system 70
3.3. Electromagnetic transitions (broad-band radiation) 73
3.4. Electromagnetic transitions with damping (weak signal approximation) 76
3.5. Rabi strong signal theory 80
4. Open quantum mechanical systems 84
4.1. The density matrix 84
4.2. Coherence between states 90
References 92

4. OPTICAL RESONATORS (SIMPLE CONSIDERATIONS). . . . . 93—107

1. Laser cavities and resonators (introduction) 93
2. Resonant cavity 93
3. Fresnel number (elementary considerations). 99
4. Photon representation of cavity properties 100
5. The Q of a cavity 101
5.1. Bandwidth of laser oscillator 101
5.2. Effect of losses on Q 103
5.3. Time constant of a passive cavity 105
6. Mode patterns observed 106
References 107

5. OPTICAL RESONATORS (GEOMETRIC THEORY) . . . . . 108—130

1. Introduction 108
2. Plane mirror cavity 108
3. Cavity with totally reflecting prism. 110
3.1. Standing waves in roof-top cavities 112
4. Spherical mirror cavities 114
4.1. Combination of plane mirror and spherical mirror 115
4.2. Combination of two spherical mirrors 117
4.3. General conditions of stability 117
5. Cavity considered as a lens sequence 119
5.1. Stability condition 121
5.2. Matrix treatment of thin lens sequence 122

6. Stability diagram 122
7. Geometrical losses from unstable cavities 125
References 130

6. OPTICAL RESONATORS (WAVE THEORY) . . . . . 131—152

1. Confocal multimode resonators 131
2. Confocal resonator fields 139
3. Non-confocal concave resonator 141
3.1. Mode separation and degeneracy 142
4. Resonators with cylindrical symmetry 143
4.1. Circular mirrors 143
4.2. Spherical annular mirrors 145
References 152

7. GAUSSIAN BEAMS . . . . . 153—175

1. Introduction 153
2. Propagation in free space 154
3. Transformation by a lens 158
3.1. Ray transfer matrix 160
3.2. Application to Gaussian beams 161
4. Cavity boundary conditions 161
5. Matching of cavities 165
5.1. Effects of cavity mismatch 167
6. Geometrical analogue 172
7. Higher order modes 174
References 175

8. GAIN AND SATURATION EFFECTS . . . . . 176—213

1. Introduction 176
2. Gain saturation 176
2.1. Theory of gain saturation 177
3. Gain narrowing 182
4. Laser amplifier gain 184
5. Saturation in high-gain lasers 185
5.1. Effect of gain saturation on modes 190
6. Power output 192
6.1. Single mode operation 193
6.2. Mirror transmission and power optimization 195
7. Hole-burning effects 196
7.1. Hole width 198
7.2. Effect of mode degeneracy on gaseous laser output 199
7.3. Hole burning and Lamb dip 203
8. Gain saturation in amplifiers with hole burning and cross relaxation . . . 204
9. Mode pulling 210
References 213

9. LAMB'S THEORY OF THE LASER . . . . . 214—259

1. Introduction 214
2. Representation of field in an active cavity 216
3. The macroscopic polarization 221
4. Theory for stationary atoms 223
   4.1. Equation of motion of density matrix with excitation 223
   4.2. First order theory (stationary atoms) 225
   4.3. Non-linear theory (stationary atoms) 230
5. Theory for moving atoms 234
   5.1. Density matrix and macroscopic polarization in the presence of atomic motion 234
   5.2. Summary of equations describing radiation field and active medium . 236
   5.3. Iterative solution of the Lamb equations 237
6. First order theory 239
7. Non-linear theory 246
   7.1. Third order theory 246
   7.2. Single mode operation 247
   7.3. Population terms 252
   7.4. Lamb dip and hole burning 252
8. Multimode operation 255
   References 259

10. COHERENCE . . . . . 260—299

1. Introduction 260
2. Elementary principles and definitions 260
3. Classical wave theory of coherence 266
4. The stochastic description of the classical radiation field 271
5. Second order coherence – the mutual coherence function 273
6. Transient coherence 278
7. Propagation of the mutual coherence function 279
8. Coherent light 281
9. The development of spatial coherence within a laser cavity 282
10. Higher order coherence effects for thermal radiation 285
11. Laser noise 288
12. Statistics of laser radiation in the presence of phase fluctuations alone . . 294
13. Statistics of laser radiation with amplitude fluctuations 297
   References 299

11. CAVITY ENGINEERING . . . . . 300—339

1. Introduction 300
2. Laser windows 300
   2.1. Brewster angled windows 300
   2.2. Perpendicular end windows 303
3. Dispersive laser cavities 303
4. Corner cube and roof-top reflectors 305

4.1. Travelling wave modes 306
4.2. Standing wave modes 308
5. Mode volume 309
5.1. Axial alignment tolerances of gas laser tubes 311
6. Mirror alignment tolerances 312
7. Frequency effects 315
7.1. Causes of frequency variations 315
7.1.1. Refractive index of gas discharges (due to density of free electrons) 316
7.2. Influence of active medium on mode formation 317
7.3. Beat frequencies between modes 317
8. Mode selection 319
8.1. Introduction 319
8.2.1. Selection of transverse modes by tilting mirrors 320
8.2.2. Selection of modes by a circular aperture 320
8.3. Mode selection in long lasers 321
8.3.1. External mode selection (Smith) 321
8.3.2. Internal mode selection (Smith and Fox) 323
8.4. Mode selection by prism 325
9. Stabilization of frequency of single mode lasers 327
10. Multilayer films 329
References 328

Appendices

A. COMPLEX INTEGRATION . . . . . 340—345
Dispersion relations 340
Hilbert transforms 343
Expansions of complex functions 344
Integral representation of Bessel functions 345

B. HAMILTONIAN FOR CHARGED PARTICLE IN ELECTROMAGNETIC FIELD . . . . . 346—348

C. RELATIONSHIP BETWEEN VECTOR POTENTIAL AND ENERGY DENSITY OF ELECTROMAGNETIC FIELD 349

D. OBLIQUE INCIDENCE OF ELECTROMAGNETIC WAVES ON A DIELECTRIC SURFACE . . . . . 350—352

E. MATRIX THEORY . . . . . 353—363
Polynomials involving matrices 358

F. SCALAR THEORY OF DIFFRACTION OF LIGHT . . . . . 364—367

G. INTEGRAL EQUATIONS . . . . . 368—370

H. HERMITE POLYNOMIALS 371

I. ORTHOGONAL FUNCTIONS . . . . . 372—383

Orthogonalization 376
Generating functions 378
Recurrence relations 380
Hermite polynomials 380
Chebyshev polynomials 381

J. DOPPLER AND NATURAL BROADENING . . . . . 384—387

Doppler broadening 384
Natural broadening 386

K. REAL CORRELATION FUNCTIONS AND THE MUTUAL COHERENCE FUNCTION . . . . . 388—389

L. SOME ELECTROMAGNETIC WAVE THEORY . . . . . 390—391

M. CYLINDRICAL REPRESENTATION OF PLANE WAVES . . . . . 392—393

N. THE PLASMA DISPERSION FUNCTION . . . . . 394—395

O. THE BIVARIATE GAUSSIAN DISTRIBUTION . . . . . 396—397
