From the Preface to the German Edition	<i>page</i> xiii
Translators' Preface	xv
Introduction	1

Part I. Fundamentals of the Theory of Infrared Spectra in the Gaseous State

1: QUANTUM-THEORETICAL BASIS	11
1. The Bohr Atom Model	11
2. Quantum-mechanical Treatment	13
2: THE INFRARED SPECTRUM OF DIATOMIC MOLECULES	16
1. Preliminary Remarks	16
2. Rotational Spectra	17
3. Vibrational Spectra	21
4. Rotational-vibrational Spectra	26
5. Intensity Considerations	31
3: SYMMETRY PROPERTIES OF MOLECULES AND VIBRATIONS	33
1. Symmetry Elements and Symmetry Operations	33
2. Point Groups	35
3. Symmetry Properties of Vibrations	35
4. Symmetry Properties of Dipole Moments and Vibrational States	51
4: ROTATIONAL SPECTRA OF POLYATOMIC MOLECULES	54
1. Preliminary Remarks	54
2. Linear Molecules	55
3. Symmetrical-top Molecules	55
4. Spherical-top Molecules	57
5. Asymmetrical-top Molecules	57

Contents

5: THE VIBRATIONS AND VIBRATIONAL SPECTRA OF POLYATOMIC MOLECULES	59
1. Calculation of Vibrational Frequencies	59
2. Vibrational Spectra of Polyatomic Molecules	66
3. Refined Treatment and Special Effects	68
6: ROTATIONAL-VIBRATIONAL SPECTRA OF POLYATOMIC MOLECULES	76
1. Linear Molecules	76
2. Symmetrical-top Molecules	81
3. Spherical-top Molecules	86
4. Asymmetrical-top Molecules	87
5. Molecules with Internal Rotation	90
7: INFRARED SPECTRA OF LIQUIDS AND SOLIDS	93
1. Alterations in the Rotational Structure of the Bands	93
2. Vibrations of Liquids and Solids	94

Part II. Equipment and Experimental Technique of Infrared Spectroscopy

1: RADIATION SOURCES	103
1. Introductory	103
2. The Nernst Glower	104
3. The Globar	106
4. Special Radiation Sources	106
2: MONOCHROMATORS	109
1. Slits	109
2. Optical System	111
3. Prisms	112
4. Diffraction Gratings	115
5. Interferometers	118
6. Optical Arrangement	119
7. The Characteristic Constants of Monochromators	121
8. Double Monochromators	126
9. Adjustment and Wavelength Standardization	129
3: RADIATION DETECTORS	134
1. Introductory	134
2. Thermocouples and Bolometers	136

3. Pneumatic Radiation Detectors	137
4. Photoelectric Infrared Radiation Detectors	139
5. Amplification and Registration	141
4: GENERAL DISCUSSION OF SPECTROMETERS	143
1. Single-beam Instruments	143
2. Double-beam Instruments	145
3. Optimal Working Conditions	150
4. Rapid or Scanning Spectrometers	151
5. Representation of Infrared Spectra	152
5: COMMERCIAL INFRARED SPECTROMETERS	155
1. The Baird Spectrometer	155
2. The Beckman Spectrometers	158
2a. The Applied Physics Corporation Spectrometers	161
3. The Grubb Parsons Spectrometers	163
4. The Hilger Spectrometer	165
5. The Leitz Infrared Spectrograph	166
6. The Perkin-Elmer Spectrometers	169
7. The Unicam Instruments	177
8. Zeiss Spectrometer	181
9. Spectrometers for the Near Infrared Region	182
6: SPECTROMETER ACCESSORIES	184
1. Cells for Gaseous Substances	184
2. Cells for Liquids	187
3. Special Cells	191
4. Reflectometers and Polarizers	196
5. Equipment for Microspectroscopy	202
6. Integrators	206
7. Accessories for Single-beam Spectrometers	208
8. Infrared Filters	209
7: NON-RESOLVING INFRARED INSTRUMENTS	210
1. Fundamental Principles	210
2. The URAS	213
3. Perkin-Elmer Tri-Non Analyser	215

Contents

8: PREPARATION OF SAMPLES	219
1. Introduction	219
2. Gaseous Substances	221
3. Liquids	222
4. Solid Substances	226
5. The Preparation of Cell Windows and Plates	237

Part III. The Methods of Practical Infrared Spectroscopy

1: THE INTERPRETATION OF CHEMICAL CONSTITUTION	243
1. The Characteristic Group Frequencies	243
2. Procedure for the Determination of Chemical Structure	254
3. Intensity Spectroscopy	259
2: QUALITATIVE ANALYSIS	265
1. Qualitative Analysis	265
2. Determination of Purity	266
3. Methods of Cataloguing and Documentation	269
3: QUANTITATIVE ANALYSIS	279
1. The Law of Absorption	279
2. Beer's Law	284
3. Integrated Absorption	286
4. Problems and Methods of Evaluation	297
5. Errors	306
4: REFLECTION, POLARIZATION AND MICROSPECTROSCOPIC MEASUREMENTS	311
1. Possibilities and Limits of Reflection Spectroscopy	311
2. The Fundamental Equations of Reflection Spectroscopy	312
3. Polarization Measurements	314
4. Microspectroscopic Measurements	319

Part IV. Results and Applications

1: THE INFRARED SPECTRA OF SOME IMPORTANT CLASSES OF SUBSTANCES	325
1. Paraffins and Cycloparaffins	325
2. Olefins and Cyclo-olefins	330

3. Carbonyl Compounds	333
4. Other Compounds containing Oxygen	337
5. Compounds containing Nitrogen	338
6. Aromatic and Heteroaromatic Compounds	340
7. Acetylenes	344
8. Halogen, Sulphur, Silicon, and Phosphorus Compounds	345
2: SUBSTANCES OF HIGH MOLECULAR WEIGHT	347
1. Introductory	347
2. Natural and Synthetic High Polymers	349
3. Condensation Products and Complicated Natural Products	361
3: INORGANIC COMPOUNDS	365
1. Fundamentals	365
2. Normal Vibrations of Ionic Crystals	365
3. Glasses	369
4: SPECIAL EFFECTS AND APPLICATIONS	371
1. Hydrogen Bonds	371
2. Rotational Isomerization	377
3. Induced Absorption	380
4. Crystals	382
5. Applications to Thermodynamics	383
6. Miscellaneous	384
