| PREFACE | V |
| CONTRIBUTORS | VII |
| <i>Chapter I</i> | |
| INTRODUCTORY SURVEY – MANSEL DAVIES | 1 |
| (1) The Infra-red Region | 1 |
| (2) Diatomic Molecules | 2 |
| (3) Polyatomic Molecules | 9 |
| (3B) Bonding and the molecular force field, 11 - (3C) Thermodynamic parameters, 13 - (3D) Condensed phase spectra, 15 - (3E) Intensities, 17 - (3F) Characteristic frequencies, 18 | |
| (4) Historical | 19 |
| References | 21 |
| <i>Chapter II</i> | |
| INSTRUMENTATION AND GENERAL EXPERIMENTAL METHODS – A. E. MARTIN | 22 |
| (1) Historical | 22 |
| (2) Modern Infra-red Spectrometers | 24 |
| (2A) General description, 24 - (2B) Radiation sources, 27 - (2C) Types of detector, 30 - (2D) Dispersion by a prism, 39 - (2E) Dispersion by a grating, 43 - (2F) Points common to prism and grating monochromators, 53 - (2G) Single-beam operation, 62 - (2H) Double-beam operation, 64 | |
| (3) Accessories | 67 |
| (3A) Absorption cells, 67 - (3B) Window materials, 71 - (3C) Miscellaneous items, 72 | |
| (4) Experimental Methods and Techniques | 77 |
| (4A) Sample preparation, 77 | |
| References | 82 |
| <i>Chapter III</i> | |
| LOW FREQUENCY INFRA-RED SPECTROSCOPY – G. R. WILKINSON | 85 |
| (1) Instrumentation | 85 |
| (2) General Features | 92 |
| (3) Spectroscopy | 94 |
| (3A) Gases, 94 - (3B) Solids, 100 | |
| (4) Conclusions | 109 |
| References | 109 |

Chapter IV

| | |
|---|-----|
| THE INFRA-RED SPECTRA OF SIMPLE MOLECULES - W. JEREMY JONES | 111 |
| (1) The Vibrational Energies of Molecules | 111 |
| (1A) Heteronuclear diatomic molecules, 113 - (1B) Polyatomic molecules, 113 - (1C) Isotopic substitution, 135 - (1D) Localized group vibrations, 137 | |
| (2) Vibration - Rotation Spectra | 138 |
| (2A) Linear molecules ($I_A = 0, I_B = I_C$), 139 - (2B) Symmetric top molecules, 145 - (2C) Spherical top molecules ($I_A = I_B = I_C$), 153 - (2D) Asymmetric top molecules ($I_A \neq I_B \neq I_C$), 154 - (2E) Overtone bands and combination bands, 158 | |
| (3) Condensed Phase Spectra | 159 |
| (3A) Rotation of molecules in the condensed phase, 162 - (3B) Rotational isomerism, 163 | |
| References. | 164 |

Chapter V

| | |
|--|-----|
| FORCE CONSTANT CALCULATIONS FOR SMALL MOLECULES - IAN M. MILLS | 166 |
| (1) Calculation of Vibration Frequencies from Force Constants | 168 |
| (2) Calculation of Force Constants from Vibration Frequencies | 181 |
| (3) Significance of Results: Simplified Force Fields | 187 |
| References. | 197 |

Chapter VI

| | |
|--|-----|
| RAMAN SPECTROSCOPY - J. C. EVANS | 199 |
| (1) Theory of Rayleigh and Raman Scattering | 199 |
| (2) Selection Rules | 205 |
| (3) Depolarization Ratio | 206 |
| (4) Rotational Raman Spectra | 207 |
| (5) Experimental. | 207 |
| (5A) Light source, 208 - (5B) Sample cell and filters, 209 - (5C) Condensing systems, 210 - (5D) Spectrography and detectors, 211 | |
| (6) Applications | 213 |
| (6A) Applications based on Raman frequencies, 213 - (6B) Applications based on Raman intensities, 218 - (6C) Applications to physical chemistry, 222 - (6D) Applications to the study of crystals, 224 | |
| (7) Conclusion | 224 |
| References. | 225 |

Chapter VII

| | |
|---|-----|
| CHARACTERISTIC FEATURES IN THE SPECTRA OF ORGANIC MOLECULES - DUŠAN HADŽI | 226 |
| (1) The Basis of Characteristic Vibrational Frequencies | 227 |
| (2) Electronic Influences on the Frequencies of Characteristic Vibrations | 236 |
| (3) Correlation of Bond Frequencies with other Bond Characteristics | 247 |
| (4) Electronic Influences on the Intensities of Characteristic Bands | 249 |

| | |
|--|-----|
| (5) Steric Effects on Characteristic Band Frequencies and Intensities | 257 |
| (6) Application of Characteristic Features to the Determination of the Gross Structure | 261 |
| References. | 266 |

Chapter VIII

| | |
|---|-----|
| INFRA-RED SPECTRA OF SOLIDS: DICHROISM AND POLYMERS - S. KRIMM | 270 |
| (1) Infra-red Spectra of Solids | 273 |
| (1A) Molecular crystals, 273 - (1B) High polymers, 281 | |
| (2) Dichroism | 283 |
| (2A) Production and use of polarized radiation, 283 - (2B) Origin of dichroism, 285 - (2C) Uses of dichroism, 287 | |
| (3) Infra-red Spectra of High Polymers | 292 |
| (3A) Methods of analysis of high polymer spectra, 292 - (3B) Polyethylene, 299 - (3C) Polyvinyl chloride, 301 - (3D) Proteins, 307 | |
| References. | 309 |

Chapter IX

| | |
|--|-----|
| INORGANIC APPLICATIONS OF INFRA-RED SPECTROSCOPY - E. A. V. EBSWORTH | 311 |
| (1) Qualitative Analysis | 311 |
| (1A) (M-H) Stretching frequencies, 313 - (1B) (M-H) Deformation frequencies, 314 - (1C) Further single bond stretching frequencies, 314 - (1D) Multiple bond stretching frequencies, 315 - (1E) Polyatomic anions, 317 - (1F) Complex species, 319 | |
| (2) Determination of Molecular Symmetry | 323 |
| (2A) The use of band contours, 325 | |
| (3) Structural Assessments | 327 |
| (3A) Dinitrogen difluoride, N_2F_2 , 327 - (3B) Sulphur tetrafluoride, SF_4 , 331 - (3C) Halogen fluorides, 333 - (3D) Diboron tetrachloride, B_2Cl_4 , 333 - (3E) Disiloxane, $(SiH_3)_2O$, 334 - (3F) Nitric acid monohydrate, 335 - (3G) Nitrogen pentoxide, N_2O_5 , 336 | |
| (4) Electronic Interpretation of Vibrational Spectra | 337 |
| (5) Worked Examples | 338 |
| References. | 340 |

Chapter X

| | |
|---|-----|
| QUANTITATIVE INTENSITY STUDIES AND DIPOLE MOMENT DERIVATIVES - JOHN OVEREND | 345 |
| (1) Basic Theory. | 346 |
| (1A) Absorption of radiation, 346 - (1B) Summation over hot bands, 349 - (1C) Overtones and combination bands, 350 - (1D) Perturbations, 350 - (1E) Units and dimensions, 352 | |
| (2) Experimental Methods | 354 |
| (2A) The Wilson-Wells theorem, 354 - (2B) Pressure broadening, 355 - (2C) Ex- perimental determination of gas phase intensities, 358 - (2D) Curves of growth, 359 - (2E) Intensities in condensed phases, 361 | |
| (3) Reduction of Experimental Gas Phase Data | 362 |
| (3A) The normal-coordinate transformation, 362 - (3B) Intensities of isotopic | |

| | |
|---|-----|
| molecules, 364 - (3C) Correction of P_r for molecular rotation, 365 - (3D) Isotope rules, 366 . . . | |
| (4) Dipole Moment Derivatives - Experimental Results | 367 |
| (4A) Benzene, 368 - (4B) Ethylene, 370 - (4C) HCN and DCN, 373 - (4D) The bond moment hypothesis, 375 - (4E) Intensities in condensed phases, 375 | |
| References. | 376 |

Chapter XI

| | |
|---|-----|
| THE METHODS AND RESULTS OF DISPERSION STUDIES - J. FAHRENFORT | 377 |
| (1) The Complex Refractive Index | 377 |
| (2) Dispersion Theory | 378 |
| (3) Refraction and Reflection at a Boundary. | 382 |
| (3A) General formulation, 382 - (3B) Incidence on a non-absorbing medium, 383 - (3C) Incidence on an absorbing medium, 385 | |
| (4) The Methods Used for Dispersion Studies | 385 |
| (4A) The determination of only one component of the complex refractive index, 386 - (4B) Simultaneous determination of n and κ , 390 | |
| (5) Accuracy of Reflection Methods. Attenuated Total Reflection. | 395 |
| (6) Results of Dispersion Studies | 396 |
| (6A) Gases, 396 - (6B) Dense media, 398 | |
| References. | 403 |

Chapter XII

| | |
|---|-----|
| HYDROGEN BONDING AND SOLVENT EFFECTS - H. E. HALLAM | 405 |
| (1) Nature and Occurrence of the H-bond | 405 |
| (1A) Infra-red evidence for H-bonding, 406 | |
| (2) (X-H) Absorption Bands | 407 |
| (2A) Effect of concentration: determination of association constants, 407 - (2B) Effect of temperature, 410 - (2C) Effect of solvent, 410 - (2D) Intensity and band shape, 410 - (2E) Relationships between $\Delta\nu$ and molecular parameters, 412 - (2F) Relationships between $\Delta\nu$ and other molecular properties, 413 | |
| (3) In-Plane and Out-of-Plane Bending Modes. | 414 |
| (3A) The H-bond stretching and other very low frequencies, 414 | |
| (4) Intramolecular Hydrogen Bonds | 415 |
| (5) H-Bonding in Liquids and Solids | 416 |
| (6) H-Bonding in Gases | 417 |
| (7) Vibrations of the Acceptor Group. | 418 |
| (8) Deuteration Shift | 418 |
| (9) General Features of Solvent Effects. | 419 |
| (10) Solvent Shifts. | 420 |
| (10A) Theories of solvent shifts, 421 - (10B) (X-H) stretching frequencies, 425 - (10C) (X=O) stretching frequencies, 430 - (10D) C-Halogen stretching frequencies, 431 - (10E) (X \equiv C) stretching frequencies, 432 - (10F) (C=S) stretching frequencies, 433 - (10G) (X-H) deformation frequencies, 433 - (10H) Anomalous behaviour, 433 - (10I) Overtone and isotopic frequencies, 434 | |
| (11) Band Shapes and Intensities | 434 |
| (11A) Theories of solvent influences on intensities, 435 | |
| (12) Correlations of $\Delta\nu$ with other Molecular Properties | 436 |

| | |
|--|-----|
| (13) Applications of Solvent Studies | 437 |
| (14) Conclusions | 438 |
| References. | 438 |

Chapter XIII

| | |
|---|-----|
| INFRA-RED EMISSION SPECTRA - W. C. PRICE. | 441 |
| (1) Black Body Radiation | 442 |
| (2) Transition Probabilities | 443 |
| (3) Lifetimes of Excited States | 445 |
| (4) Infra-red Emission from Gases. | 446 |
| (4A) Thermal emission, 447 - (4B) Flame emission, 448 - (4C) Spectra from electrical discharges, 451 - (4D) Chemiluminescence, 453 | |
| (5) Infra-red Emission from Solids. | 454 |
| (5A) Emission from crystalline, amorphous and non-metallic solids, 454 - (5B) Emission from metals, 455 - (5C) Photoluminescence, 456 - (5D) Crystal lasers, 456 - (5E) Gas lasers, 458 | |
| References. | 458 |
| SUBJECT INDEX | 459 |
