

## Contents

<i>Preface</i> . . . . .	v
<i>Chapter 1. HISTORICAL</i> . . . . .	1
<i>Chapter 2. MODERN INFRA-RED SPECTROMETERS</i> . . . . .	4
(1) General description . . . . .	4
(1A) Monochromator design . . . . .	5
(2) Radiation sources . . . . .	8
(2A) Emission from a black body . . . . .	8
(2B) Nernst filament . . . . .	11
(2C) Refractory filament . . . . .	12
(2D) Globar . . . . .	13
(2E) Welsbach mantle . . . . .	13
(2F) Mercury lamp . . . . .	14
(2G) Source stabilisation . . . . .	15
(3) Detectors . . . . .	16
(3A) Types of detector . . . . .	16
(3B) Detector terminology . . . . .	16
(3C) Simple theory - thermocouple and bolometer . . . . .	18
(3D) Golay cell . . . . .	22
(3E) Noise in detectors . . . . .	24
(3F) Photoconductive detectors - lead sulphide, lead selenide, indium antimonide, etc. . . . .	26
(3G) Germanium bolometers for use at $\sim 4^\circ\text{K}$ . . . . .	28
(3H) Gold, copper and mercury-doped germanium detectors . . . . .	30
(3I) Superconducting bolometer . . . . .	30
(3J) Indium antimonide detector (helium cooled) in magnetic field . . . . .	31
(3K) Condensing systems for use with detectors . . . . .	31
(i) Spherical mirror . . . . .	31
(ii) Ellipsoidal mirror . . . . .	32
(iii) Off-axis ellipsoid . . . . .	32
(iv) Pair of spherical mirrors . . . . .	32
(v) Spherical and plane mirrors . . . . .	32
(vi) One plane and two concave mirrors . . . . .	34
(vii) Germanium immersion . . . . .	34
(viii) Light pipes . . . . .	35

(4)	Dispersion by a prism . . . . .	37
	(4A) Minimum deviation . . . . .	38
	(4B) Resolution when energy limited . . . . .	39
	(4C) Prism materials. . . . .	41
	(4D) Temperature effects . . . . .	41
	(4E) Curvature of spectral image . . . . .	41
(5)	Dispersion by a grating . . . . .	42
	(5A) Theory of the diffraction grating. . . . .	42
	(5B) Resolution when energy limited . . . . .	44
	(5C) Practical grating systems . . . . .	45
	(5D) Order selection . . . . .	46
	(i) Use of prism . . . . .	47
	(ii) Use of filters . . . . .	48
	(5E) Provision of linear wavelength scale . . . . .	50
	(5F) Provision of linear wavenumber scale. . . . .	51
	(5G) Curvature of spectral image . . . . .	52
	(5H) Grating <i>vs.</i> prism . . . . .	53
(6)	Points common to prism and grating monochromators. . . . .	55
	(6A) Wavenumber <i>vs.</i> wavelength presentation . . . . .	55
	(6B) Wavenumber and wavelength calibration . . . . .	58
	(6C) Stray radiation . . . . .	60
	(6D) Theoretical resolving power of prisms and gratings. . . . .	61
	(i) Prism. . . . .	63
	(ii) Grating. . . . .	63
	(6E) Effect of unequal slits . . . . .	64
	(i) Energy . . . . .	65
	(ii) Resolution . . . . .	66
	(6F) Loss of resolution due to curvature of spectral image . . . . .	67
(7)	Single-beam operation . . . . .	68
	(7A) Single-beam radiation unit. . . . .	68
	(7B) Optical arrangement for maximum signal . . . . .	70
(8)	Double-beam operation . . . . .	71
	(8A) Some double-beam systems . . . . .	71
	(8B) Toroidal mirrors . . . . .	74
	(8C) Operation of servo system . . . . .	75
(9)	Some commercial spectrometers . . . . .	79
	(9A) Approximate range 1 to 25 $\mu$ . . . . .	79
	(9B) Beyond 25 $\mu$ (Table 10) . . . . .	85
	(i) Design features for wavelengths longer than 50 $\mu$ . . . . .	86
	(ii) Window materials for the longwave region . . . . .	91
	(iii) Sample handling in the far infra-red . . . . .	91
<i>Chapter 3. MISCELLANEOUS INSTRUMENTS . . . . .</i>		94
	(A) Spectrosorter . . . . .	94
	(B) Infra-red gas analyser . . . . .	96
	(C) Optical pyrometers and radiation thermometers . . . . .	99

(D) Radiation thermometer for measuring the temperature of a plastic film . . . . .	101
(E) Infra-red milk analyser . . . . .	101
<i>Chapter 4. INTERFEROMETRIC SPECTROMETERS</i> . . . . .	103
(1) Introduction . . . . .	103
(2) Theoretical considerations . . . . .	105
(2A) Relation between interferogram and spectrum . . . . .	105
(2B) Negative frequencies . . . . .	108
(2C) Sine transforms . . . . .	109
(2D) Gaussian functions and resolution . . . . .	112
(2E) Relationship between grating and interferometer . . . . .	113
(2F) Scanning functions . . . . .	116
(2G) Apodization . . . . .	116
(3) Practical instruments . . . . .	118
<i>Chapter 5. ACCESSORIES</i> . . . . .	121
(1) Absorption cells . . . . .	122
(1A) Reflection from optical media - Fresnel equations . . . . .	122
(i) Single reflection . . . . .	122
(ii) Multiple reflections, neglecting interference . . . . .	123
(iii) Multiple reflections, allowing for interference . . . . .	124
(iv) Use of anti-reflection coatings ("blooming") . . . . .	125
(1B) Window materials . . . . .	126
(1C) Gas cells . . . . .	128
(i) Standard type . . . . .	128
(ii) Minimum volume cells . . . . .	129
(1D) Heated gas cell . . . . .	129
(1E) Liquid cells . . . . .	129
(i) Simple type . . . . .	129
(ii) Semi-permanent cells (demountable type) . . . . .	130
(iii) Spacing washers . . . . .	130
(iv) Amalgamated spacers . . . . .	131
(v) Microcells and cavity cells . . . . .	131
(vi) Variable path cells . . . . .	133
(vii) Cell for volatile liquids . . . . .	133
(viii) Measurement of cell thickness . . . . .	134
(ix) Throwaway cells . . . . .	134
(1F) Heated liquid cell . . . . .	134
(1G) Low temperature liquid cell . . . . .	135
(2) Miscellaneous items . . . . .	136
(2A) Device for checking linearity of transmittance scale . . . . .	136
(2B) Reflectance attachment . . . . .	137
(2C) External focus . . . . .	137
(2D) Reflecting microscope . . . . .	139
(2E) Beam attenuator . . . . .	141

(2F) Wavelength to wavenumber scale conversion . . .	141
(2G) Absorbance presentation, . . . . .	142
(2H) Ordinate scale expansion . . . . .	143
(2I) Integrator . . . . .	144
(2J) Polarizer . . . . .	145
(2K) Longpath cell and small volume cell . . . . .	147
(2L) Heatless air dryer . . . . .	148
<i>Chapter 6. EXPERIMENTAL METHODS AND TECHNIQUES</i> . . . .	150
(1) Sample preparation . . . . .	150
(1A) Solutions in organic solvents. . . . .	150
(1B) Aqueous solutions . . . . .	151
(1C) Alkali halide discs . . . . .	152
(1D) Liquid mulls - internal standard . . . . .	154
(1E) Preparation from melt . . . . .	154
(1F) Casting from solution . . . . .	154
(1G) Films on reflecting surfaces . . . . .	155
(1H) Viscous liquids . . . . .	155
(1I) Reflection and attenuated total reflection . . . .	155
(i) Laws of reflection . . . . .	155
(ii) Practical ATR systems . . . . .	161
(iii) Grubb Parsons ATR unit . . . . .	162
(iv) RIIC ATR unit TR-5. . . . .	163
(v) Micro and multi ATR . . . . .	164
(1J) Difference spectra. . . . .	167
(1K) Derivative spectroscopy . . . . .	168
(1L) Reference spectra collections, etc. . . . .	169
<i>Appendix</i> . . . . .	171
<i>References</i> . . . . .	173
<i>Index</i> . . . . .	177
