Preface v

INTRODUCTION

Classifications of Spectroscopy 1
Wavelength, Frequency, and Energy of Radiation 3

Chapter 1 INTRODUCTION TO THE THEORETICAL TREATMENT OF MOLECULAR SYSTEMS 7

1-1 The Recognition of Quantum Restrictions 7
1-2 The Bohr Theory of the Hydrogen Atom 8
1-3 The Wave Nature of Particles 11
1-4 The Time-independent Schrödinger Equation 12
1-5 The Particle-in-a-box Problem 14
1-6 Normalization of Wave Functions 17
1-7 Orthogonality 18
1-8 Symmetry Properties of Wave Functions 20
1-9 The Quantum-mechanical Average 21
1-10 The Boltzmann Distribution 23

Chapter 2 THE VIBRATIONAL ENERGIES OF A DIATOMIC MOLECULE 25

2-1 The Vibrations of a Single Particle (Classical) 26
2-2 The Vibrations of Two Particles Connected by a Spring (Classical) 30
2-3 The Potential-energy Function for a Chemical Bond 34

2-4 The Quantum-mechanical Solutions of the Harmonic Oscillator 37

2-5 Vibrational Absorption Spectra of Diatomic Molecules 40

2-6 The Anharmonicity of Molecular Vibrations 43

Chapter 3 THE ROTATIONAL ENERGIES OF LINEAR MOLECULES 47

3-1 The Rotation of a Linear System (Classical) 48

3-2 The Rotation of a Linear System (Quantum Mechanical) 50

3-3 Rotational Energy-level Populations 53

3-4 Rotational Spectra of Rigid Linear Molecules 54

3-5 The Nonrigid Rotor 57

Chapter 4 THE ABSORPTION AND EMISSION OF RADIATION 61

4-1 The Time-dependent Schrödinger Equation 61

4-2 Induced Quantum Transitions 63

4-3 The Interaction of Electromagnetic Radiation with a Molecular System 66

4-4 Comparison with Experimental Quantities 70

4-5 The Basis of Selection Rules 72

4-6 The Integrated Absorption Coefficient for a Transition of a Particle in a Box 74

4-7 Induced Emission and Induced Absorption 76

4-8 The Integrated Absorption Coefficient for a Vibrational Transition 76

4-9 The Intensities of Absorption Bands due to Electronic Transitions 80

Chapter 5 ROTATIONAL SPECTRA 83

5-1 Rotational Selection Rules for Linear Molecules 84

5-2 The Stark Effect in Molecular Rotation Spectra 89

5-3 Molecular Rotation—Nuclear-spin Coupling 92

5-4 The Positive and Negative Character of the Wave Functions of Linear Molecules 96

5-5 Symmetric-Antisymmetric Character and Statistical Weight of Homonuclear Linear Molecules 98

5-6 The Rotational Energy of Symmetric-top Molecules 104

5-7 Selection Rules and Spectra of Symmetric-top Molecules 106

5-8 Results from Analyses of Rotation Spectra of Symmetric-top Molecules 109

5-9 The Energy Levels of an Asymmetric-top Molecule 109

5-10 Selection Rules, Spectra, and Structure Results for Asymmetric-top Molecules 112

Chapter 6 THE VIBRATIONS OF POLYATOMIC MOLECULES 115

6-1 The Number of Independent Vibrations of a Polyatomic Molecule 115

6-2 The Nature of Normal Vibrations and Normal Coordinates 116

6-3 Quantum-mechanical Treatment of the Vibrations of Polyatomic Molecules 122

6-4 The Symmetry Properties of Normal Coordinates 125

Chapter 7 ROTATION-VIBRATION SPECTRA 131

7-1 Selection Rules and Transitions for the Rigid Rotor–Harmonic Oscillator Model 134

7-2 The Relative Intensities of the Components of a Rotation-Vibration Absorption Band 136

7-3 Coupling of Rotation and Vibration 138

7-4 Parallel Bands of Linear Molecules 142

7-5 Perpendicular Bands of Linear Molecules 146

7-6 Parallel Bands of Symmetric-top Molecules 149

7-7 Perpendicular Bands of Symmetric-top Molecules 152

Chapter 8 MOLECULAR SYMMETRY AND GROUP THEORY 159

8-1 Symmetry Elements, Symmetry Operations, and Point Groups 160

8-2 Symmetry Operations on Molecular Motions 163

8-3 Symmetry Species and Character Tables 168

8-4 The Nature of a Group 172

8-5 The Symmetry Operations as a Group 174
8-6 Representations of a Group 175
8-7 Reducible and Irreducible Representations 179
8-8 The Irreducible Representations as Orthogonal Vectors 181
8-9 Characters of Representations 183
8-10 Classes 186
8-11 Analysis of a Reducible Representation 188
8-12 The Characters for the Reducible Representation of Molecular Motion 190
8-13 Number of Normal Modes of Various Symmetry Types 194
8-14 The Infrared Active Fundamentals 195
8-15 The Symmetry of Group Vibrations 198

Chapter 9 CALCULATION OF VIBRATIONAL FREQUENCIES AND NORMAL COORDINATES OF POLYATOMIC MOLECULES 202

9-1 The Kinetic-energy Expressions for a Polyatomic Molecule 203
9-2 The Potential-energy Expression for a Polyatomic Molecule 204
9-3 Use of Lagrange's Equation in Molecular-vibration Problems 207
9-4 The Stretching Vibrations of a Linear Triatomic Molecule 208
9-5 Use of Symmetry in Vibrational Problems 213
9-6 Solution of Vibrational Problems in Internal Coordinates by the Method of Wilson 218
9-7 Formation of the G Matrix by a Vectorial Method 223
9-8 Use of Symmetry Coordinates in Wilson's Method 226

Chapter 10 THE ELECTRONIC SPECTRA OF DIATOMIC MOLECULES 230

10-1 The Vibrational Structure of Electronic Bands 231
10-2 Rotational Structure of Electronic Bands 238
10-3 Electronic States of Atoms 244
10-4 Electron Orbitals in Diatomic Molecules 251
10-5 Electronic States of Diatomic Molecules 260

10-6 Potential-energy Curves for Electronic States of Diatomic Molecules 261

11 ELECTRONIC SPECTRA OF POLYATOMIC MOLECULES 264

11-1 Electronic States of Localized Groups 266

11-2 Electronic Transitions and Absorption Bands 271

11-3 Conjugated Systems by the Free-electron Model 276

11-4 Electronic States and Transitions in Aromatic Systems 279

11-5 Electron Orbitals of Coordination Compounds 289

11-6 Electronic States of Coordination Compounds 293

11-7 Nonradiative Processes 305

11-8 Fluorescence 307

Index 315
