## PART I. VISIBLE AND ULTRA-VIOLET SPECTROPHOTOMETRY

*G. H. Beaven, M.Sc., Ph.D. and E. A. Johnson, M.A., D.Phil.*

1. INTRODUCTION . . . . .	3
<i>Simple Theory—Electronic Transitions—The Triplet State—Solvent Effects—Temperature Effects—The Presentation of Spectra—Literature, Indexes, and Sources of Data—The General Theory of Molecular Electronic Spectra—Terminology</i>	
2. INSTRUMENTATION . . . . .	27
<i>Radiation Sources—Detectors—Monochromators—Photometry in Absorption Spectrophotometry—Photoelectric Spectrophotometry—Automatic Recording Double Beam Spectrophotometers—The Moving Plate Photographic Method—Electronics in Spectroscopy</i>	
3. THE PRACTICE OF SPECTROPHOTOMETRY . . . . .	58
<i>Elementary Theory and Sources of Error—Calibration and Maintenance—Spectrophotometric Measurements in Practice—Cells (Cuvettes)—Solvents</i>	
4. THE CORRELATION OF ELECTRONIC ABSORPTION SPECTRA WITH MOLECULAR STRUCTURE . . . . .	107
<i>Inorganic Ions—Organic Molecules—Simple Transitions—Conjugation—Aromatic Systems—Substitution in Benzene—cis/trans Isomerism</i>	
5. QUANTITATIVE ANALYSIS . . . . .	126
<i>Elementary Applications—Interference by Background Absorption—Corrections for Background Absorption—Morton and Stubbs Correction for Background Absorption—Background Absorption due to Scattering—Analysis of Multi-component Systems—Analysis by Variable Reference Compensation—Final Comments</i>	

## PART II. PRINCIPLES AND METHODS OF APPLIED INFRA-RED SPECTROSCOPY

*H. A. Willis, B.Sc. and R. G. J. Miller, B.Sc.*

	PAGE
6. INTRODUCTION . . . . .	163
<i>History—Practical Units for Infra-red Radiation—The Nature of Infra-red Absorption—The Fundamental Vibrations of a Molecule—Vibration-Rotation Spectra—Vibrational Spectra of Complex Molecules—Calculation of Fundamental Frequencies—Overtone and Combination Bands—Uses of the Infra-red Spectrum</i>	
7. INSTRUMENTS . . . . .	174
<i>The Spectrometer—The Single Beam Prism Spectrometer—Essential Components—Performance of Spectrometers—Other Optical Systems—The Double Beam Spectrometer—Ordinate Scale Expansion—Non-dispersive Instruments or Analysers</i>	
8. PREPARATION OF SAMPLES . . . . .	199
<i>General Procedure—Window Materials—Gas Cells—Liquid Cells—Examination of Micro-quantities of Sample—Examination of Solids—The Reflecting Microscope—A Heated Cell for Observing Spectra at High Temperatures—A Low Temperature Cell</i>	
9. THE INFRA-RED SPECTRUM AND CHEMICAL STRUCTURE . . . . .	222
<i>Introduction—Factors Influencing Characteristic Group Frequencies—Spectral Distribution of Characteristic Bands—Hydrocarbons—Molecules Containing Oxygen—Molecules Containing Nitrogen—Molecules Containing Halogens—Molecules Containing Other Important Elements—Compounds Containing Heavy Elements</i>	
10. QUALITATIVE ANALYSIS . . . . .	258
<i>General Principles—The Practical Approach—Analysis with Known Components—Identification of a Single Unknown Compound—Analysis of a Mixture</i>	
11. QUANTITATIVE ANALYSIS . . . . .	279
<i>General Principles—Analysis of Two-component Mixtures in the Liquid Phase: The Use of a 'Key Band'—Analysis of Multi-component Mixtures in the Liquid Phase—Analysis of Solid Mixtures—Analysis of Gaseous Mixtures—The Double Beam Difference Method—Quantitative Analysis by the Difference Method—The Derivative Method—The Non-dispersive Analyser</i>	
12. THE INFRA-RED SPECTRUM AND PHYSICAL STRUCTURE . . . . .	308
<i>Physical Factors Affecting Absorption—Isomerism—Change of Phase—The Use of Physical Effects in the Study of Polymers—The Use of Polarized Infra-red Radiation</i>
