

Contents

- 1 Introduction 1
- 2 Mass Spectrometry 4
 - Introduction 4
 - Instrumentation 5
 - The Mass Spectrum 8
 - Determination of a Molecular Formula 9
 - Recognition of a Parent Peak 11
 - Use of the Molecular Formula 12
 - Fragmentation 12
 - Derivatives 13
 - Mass Spectra of Some Chemical Classes 14
- 3 Infrared Spectrometry 64
 - Introduction 64
 - Theory 65
 - Instrumentation 68
 - Sample Handling 70
 - Interpretation of Spectra 72
 - Characteristic Group Frequencies of Organic Molecules 78
- 4 Nuclear Magnetic Resonance Spectrometry 110
 - Introduction and Theory 110
 - Apparatus and Sample Handling 113
 - Chemical Shift 114
 - Simple Spin-Spin Coupling 117
 - Protons on Heteroatoms 121
 - Coupling of Protons to Other Nuclei 124
 - More Complex Spin-Spin Coupling 125
 - Chemically, but not Magnetically, Equivalent Protons 127
 - Effects of an Asymmetric Center 129
 - Virtual Coupling 130
 - Vicinal and Geminal Coupling in Rigid Systems 131
 - Long-Range Coupling 132
 - Spin-Spin Decoupling 132
- 5 Ultraviolet Spectrometry 148
 - Introduction 148
 - Theory 149
 - Instrumentation 152
 - Sample Handling 154
 - Characteristic Absorption of Organic Compounds 155
- 6 Sets of Spectra Translated into Compounds 170
- 7 Sets of Spectra with Beilstein References 216
- 8 Sets of Spectra, Unidentified 227
- Index 251
