PREFACE xi

Chapter 1 High Resolving Power Fourier Spectroscopy

Hajime Sakai

1.1 Introduction	2
1.2 Spectral Resolution	12
1.3 Interferogram Sampling	20
1.4 Signal-to-Noise Ratio	23
1.5 Interferometer	31
1.6 Implementation of Data Measurement	49
1.7 Computations	56
1.8 Conclusions	68
References	69

Chapter 2 Field-Widened Interferometers for Fourier Spectroscopy

Doran Baker

2.1 Introduction	71
2.2 Field-of-View Considerations	72
2.3 Methods of Field Compensation	76
2.4 Summary and Applications	99
References	105

Chapter 3 Applications of Fourier Transform Spectroscopy

Robert J. Bell

3.1 Introduction	107
3.2 Transmission Studies of Solids	108
3.3 Transmission Studies of Liquids	119
3.4 Transmission Studies of Gases	120
3.5 Reflection Studies	122
3.6 ATR Studies of Surfaces	126
3.7 Emission Studies	137
3.8 Planetary Atmospheres and Astronomy	139
3.9 Asymmetric Interferometry and Measuring Complex Indices of Refraction	145

3.10 Relaxation Phenomenon	147
3.11 Industrial Applications	147
3.12 Conclusions and Comments	149
References	150

Chapter 4 Cryogenic Instrumentation

E. Ray Huppi

4.1 Introduction	153
4.2 Advantages of Cryogenic Instrumentation	154
4.3 Cryogenic Instruments	161
4.4 Conclusions	186
Appendix A	187
References	188

Chapter 5 Hadamard-Transform Spectroscopy

John A. Decker, Jr.

5.1 Introduction	190
5.2 What Is Hadamard-Transform Spectrometry?	190
5.3 Theory of Hadamard Spectrometers	197
5.4 Sources of Noise: Effect on Transform Spectrometers	206
5.5 Some Practical Considerations	212
5.6 Epilogue	225
References	227

Chapter 6 Measurements of Infrared Transient Phenomena

Randall E. Murphy

List of Symbols	229
6.1 Introduction	231
6.2 Experimental Conditions	233
6.3 Excitation Sources	251
6.4 Conventional Time-Resolved Techniques	259
6.5 Time Resolution in Fourier Spectroscopy	266
References	277

Chapter 7 Calibration Techniques

Thomas P. Condon

7.1 Introduction	280
7.2 Field Radiometric Quantities	281
7.3 Sensor Response Definitions	284
7.4 Response-Weighted Radiometric Quantities	285

7.5 The Normalized Transfer Function	289
7.6 Angular Response Calibration	300
7.7 Spectral Response Calibration	312
7.8 Absolute Calibration	319
7.9 Conversion of Sensor Outputs to Field Quantities	326
References	330

Appendix Performance and Characteristics of Commercially Available Instruments

D. J. Lovell

A.1 Introduction	331
A.2 Fourier-Transform Spectrometers	332
A.3 Hadamard-Transform Spectrometers	342
A.4 Circular Variable Filter Radiometers	343
A.5 Cryogenically Cooled Spectrometers	346
A.6 Constant Energy Output Monochromator	347
A.7 Electronically Tunable Filters	348
