

## CONTENTS

Chapter1. Theory of Specific Heat of Solids	1
1.1 Introduction	1
1.2 Lattice Specific Heat	7
1.3 Electronic Specific Heat	34
1.4 Magnetic Specific Heat	52
1.5 Summary	71
1.6 Appendix: Estimation and Correlation of Specific Heat	72
1.7 References	82
Chapter 2. Calorimetry Below 1 K	91
2.1 Introduction	91
2.2 Problems Encountered in the Temperature Range 0.01 – 1 K	92
2.3 Calorimetric Technique	97
2.4 Summary	109
2.5 Acknowledgement	109
2.6 References	110
Chapter 3. Calorimetry in the Range 0.3-30 K	113
3.1 Introduction	113
3.2 Cryostats	114
3.3 Thermometry	116
3.4 Calorimeter Design	121
3.5 Isoperibol Calorimeters	131
3.6 Adiabatic Calorimeters	132
3.7 Continuous Heating Calorimeters	133
3.8 Novel Techniques	133
3.9 Special Situations	137
3.10 Automated Calorimetry in the 0.3-30 K Temperature Range	139
3.11 Analysis of Data. Accuracy	141
3.12 References	146
Chapter 4. Calorimetry in the Range 5-300 K	153
4.1 Introduction	153
4.2 Cryostat Design	154
4.3 Calorimeter Design	165
4.4 Thermometry and Temperature Scales	169
4.5 The Trend Toward Automation in Data Acquisition	170
4.6 The Trend Toward smaller Samples	171
4.7 Measurement Techniques and Adjuvant Circuitry	172
4.8 Special Techniques	174
4.9 Transitions-Phase and Otherwise	178
4.10 Reference Standards for Thermophysical Calorimetry	178
4.11 Procedures for Data Handling and Presentation	179
4.12 Comparison of DSC and Adiabatic Approaches	183
4.13 Concluding Remarks	185
4.14 Acknowledgement	185
4.15 References	185
Chapter 5. Adiabatic Calorimetry Above 300 K	191
5.1 Introduction	191
5.2 The Principle of Adiabatic Calorimetry	192
5.3 General Design and Operation	194
5.4 Adiabatic Shield and Calorimeter Cell and Sample Design	198
5.5 Temperature Measurements in High-Temperature Calorimetry	210
5.6 Corrections to the measured Specific Heat	221
5.7 Errors and Accuracy of Specific Heat Measurements	229
5.8 Computer Operation of Calorimeters	234
5.9 Survey of Adiabatic Calorimeters	237

5.10 Closure	237
5.11 Acknowledgements	237
5.12 Bibliography	238
5.13 References	239
Chapter 6. Drop Calorimetry Above 300 K	243
6.1 Introduction	243
6.2 Fundamental Concepts and Relationships in Drop Calorimetry	244
6.3 Classification and Description of Drop-Calorimetric Apparatus	248
6.4 Analysis and Presentation of Drop-Calorimetric Data	257
6.5 References	261
Chapter 7. Levitation Calorimetry	265
7.1 Introduction	265
7.2 Levitation Methods	266
7.3 Calorimeter Designs	275
7.4 Optical Pyrometry	281
7.5 Data Reduction	283
7.6 Enthalpies and Heat Capacities of Liquid Metals	290
7.7 Acknowledgements	294
7.8 References	294
7.9 Appendix: Nomenclature	297
Chapter 8. Modulation Calorimetry	299
8.1 Introduction	299
8.2 Theory of Modulation Calorimetry	300
8.3 Modulation of heating Power	303
8.4 Measurement of Temperature Oscillations	305
8.5 Measurements at High Modulation Frequencies	309
8.6 Accuracy of modulation measurements	310
8.7 Applications of Modulation Calorimetry	313
8.8 Conclusion	316
8.9 References	317
Chapter 9. Pulse Calorimetry	323
9.1 Introduction	323
9.2 Description of Methods	324
9.3 Chronology of Developments	329
9.4 A Millisecond-Resolution Technique	337
9.5 A Microsecond-Resolution Technique	342
9.6 Experimental Difficulties and Sources of Error	346
9.7 Summary and Conclusions	350
9.8 References	351
Chapter 10 Calorimetry at Very High Pressures	355
10.1 introduction	
10.2 Adiabatic Calorimetry	355
10.3 Steady-State, a.c. –Temperature Calorimetry	355
10.4 Method Using a Steady-State Alternating Heat Flow	371
10.5 Methods Using a Heat Pulse	375
10.6 Discussion and Conclusions	391
10.7 References	392
Chapter 11. Differential Scanning Calorimetry	395
11.1 Introduction	395
11.2 D.S.C. Versus D.T.A. – History, Nomenclature, and Applications	396
11.3 Simple Theory of Heat Flow in D.S.C. and D.T.A.	399
11.4 Types of Differential Scanning Calorimeter–Custom Versus Commercial	406
11.5 Advantages and Disadvantages of D.S.C. for Heat-Capacity Measurement	409
11.6 Experimental Procedure for measuring Accurate Heat Capacity by D.S.C.	410
11.7 Measurement of Enthalpy and Temperature of Transition by D.S.C.	423
11.8 Sources of Error in Determination of heat Capacity by D.S.C.	427
11.9 Examples of accurate Heat Capacity Investigations by D.S.C.	431
11.10 Analysis of Heat Capacity Data by D.S.C.	432
11.11 Conclusions	432
11.12 Thermal Analysis Societies and Journals	433

11.13 Acknowledgment	433
11.14 References	433
Chapter 12 Special Problems in Calorimetry of Radioactive Materials	437
12.1 Introduction	437
12.2 Calorimetric Implications of Radioactive Materials	437
12.3 Specific-Heat Determinations	439
12.4 References	447
12.5 Appendix: Bibliography of Calorimetry Using Radioactive Materials	448
Appendix A. Materials of Construction in High-Temperature Calorimetry	453
1. Introduction	453
2. Mechanical Properties	454
3. Thermal Expansion	459
4. Heat Transfer Properties	460
5. Electrical Resistivity	463
6. Electron Emission	467
7. Thermal and Chemical Stability	468
8. Fabricability	471
9. References	472
Appendix B. Reference Materials for Calorimetry	473
1. Introduction	473
2. Materials Available from the United States	473
3. Materials Available from Other Sources	475
4. References	476
Appendix C. Presentation of Thermophysical Data in the Scientific and Technological Literature	477
1. Introduction	477
2. The Guide for Data Presentation	478
3. The Guide for Thermodynamic Data	478
4. Repositories for Thermophysical Data	478
5. References	479
Subject Index	481
