

# CONTENTS

Preface vii

Chemical elements viii

Table number Page

## SOLIDS

2	Thermal properties of the solid elements . . . . .	3
3	Thermal properties of solid inorganic compounds . . . . .	4
4	Thermal properties of solid organic compounds . . . . .	4
5	Linear thermal expansion coefficients of solids . . . . .	5
6	Melting points of alloys . . . . .	11
7	Melting points of miscellaneous solids . . . . .	11
8	Melting points of salt baths . . . . .	11
9	Specific and mean specific heats of solid elements . . . . .	12
10	Specific heat of solid organic compounds . . . . .	16
11	Specific and mean specific heats of alloys . . . . .	17
12	Specific and mean specific heats of solid inorganic compounds . . . . .	18
13	Specific heats of miscellaneous solids . . . . .	20
14	Specific heats of some foods . . . . .	23
15	Thermal conductivities of metals . . . . .	24
16	Thermal conductivities of alloys . . . . .	27
17	Thermal conductivities of building materials . . . . .	32
18	Thermal conductivities of miscellaneous solids . . . . .	37
19	Thermal conductivities of insulating materials . . . . .	40
20	Thermal conductivities of fire and ceramic bricks . . . . .	46
21	Thermal conductivity of burnt kieselguhr (diatomaceous earth) . . . . .	49
22	Thermal conductivity of lampblack . . . . .	49
23	Emissivities of metal surfaces . . . . .	50
24	Emissivities of nonmetal surfaces . . . . .	54
25	Emissivities of paints and coatings . . . . .	55
26	Heating values of solid fuels . . . . .	56

## LIQUIDS

27	Thermal properties of liquids . . . . .	59
28	Critical constants of gases . . . . .	61
29	Coefficients of cubical thermal expansion of liquids . . . . .	62
30	Specific heats of liquids . . . . .	63
31	Specific heat of water at atmospheric pressure . . . . .	68
32	Specific heat of water at higher pressures . . . . .	68

**IMPORTANT NOTE:** Users of Liquids, Vapors, and Gases tables are alerted to the fact that the symbol for pressure, *at*, refers to the **technical atmosphere** and not to the **standard atmosphere**, which is designated by *atm*.

The relationship of conversion factors between the two atmospheres is clearly explained in Table 119 on page 337.

33	Densities of miscellaneous liquids . . . . .	69
34	Viscosities of miscellaneous liquids . . . . .	81
35	Thermal conductivities of liquids . . . . .	95
36	Thermodynamic properties of water at saturation pressure . . . . .	100
37	Thermal conductivity of water at various pressures . . . . .	101
38	Composition and heating values of liquid fuels . . . . .	102

## VAPORS

39	Properties of saturated steam at a given temperature (gravitational metric system) . . . . .	105
40	Properties of saturated steam at a given pressure (gravitational metric system) . . . . .	112
41	Properties of superheated steam (gravitational metric system) . . . . .	118
42	Specific heats $c_p$ and $c_v$ of superheated steam . . . . .	139
43	Mean specific heats of superheated steam at constant pressure . . . . .	145
44	Properties of saturated steam at a given temperature (International System of Units—SI) . . . . .	148
45	Properties of superheated steam (International System of Units—SI) . . . . .	155
45-7	Critical constants of water (International System of Units—SI) . . . . .	160
46	Properties of superheated steam (International System of Units—SI) . . . . .	161
47	Properties of saturated diphenyl vapors . . . . .	182
48	Properties of saturated mercury vapors . . . . .	183
49	Thermodynamic properties of refrigerants . . . . .	185
50	Properties of saturated ammonia . . . . .	186
51	Properties of saturated dichlorodifluoromethane "Freon 12" . . . . .	189
52	Properties of saturated chlorodifluoromethane "Freon 22" . . . . .	193
53	Properties of saturated ethane . . . . .	195
54	Properties of saturated methyl chloride . . . . .	196
55	Properties of saturated trichlorofluoromethane "Freon 11" . . . . .	197
56	Properties of saturated propane . . . . .	199
57	Properties of saturated sulfur dioxide . . . . .	200
58	Properties of saturated chlorofluoromethane "Freon 13" . . . . .	201
59	Properties of saturated carbon dioxide . . . . .	202
60	Properties of superheated dichlorodifluoromethane "Freon 12" . . . . .	204
61	Properties of superheated chlorodifluoromethane "Freon 22" . . . . .	214
62	Viscosities of refrigerants at saturation . . . . .	237
63	Viscosities of ammonia at various pressures and temperatures . . . . .	238
64	Viscosities of methyl chloride at various pressures and temperatures . . . . .	238
65	Viscosities of sulfur dioxide at various pressures and temperatures . . . . .	239
66	Viscosities of carbon dioxide at various pressures and temperatures . . . . .	239
67	Properties of saturated moist air . . . . .	240
68	Properties of superheated steam . . . . .	243
69	Coefficient of thermal conductivity of steam at various pressures . . . . .	244

## GASES

70	Thermal properties of gases . . . . .	247
71	Specific heats of gases at constant pressure . . . . .	249
72	Specific heats of gases at constant volume . . . . .	252
73	Specific heats of gases at constant pressure . . . . .	255
74	Specific heats of gases at constant volume . . . . .	258
75	Specific heats of gases at constant pressure . . . . .	261
76	Specific heats of gases at constant volume . . . . .	264

77	Mean specific heats of gases at constant pressure . . . . .	267
78	Mean specific heats of gases at constant volume . . . . .	269
79	Mean molar heat capacity of gases at constant pressure . . . . .	271
80	Mean molar heat capacity of gases at constant volume. . . . .	273
81	Mean volume heat capacity of gases at constant pressure . . . . .	275
82	Mean volume heat capacity of gases at constant volume. . . . .	277
83	Specific enthalpy of gases . . . . .	279
84	Molar specific enthalpy of gases . . . . .	282
85	Volume specific enthalpy of gases . . . . .	285
86	Specific entropy of gases . . . . .	288
87	Molar specific entropy of gases . . . . .	291
88	Volume specific entropy of gases . . . . .	294
89	Viscosities of gases . . . . .	297
90	Thermal conductivities of gases . . . . .	303
91	Thermal conductivities of diatomic and triatomic gases at various temperatures . . . . .	307
92	Thermal conductivities of flue gases containing 13% CO <sub>2</sub> at various temperatures. . . . .	307
93	Specific heat of dry air at various pressures . . . . .	308
94	Properties of dry air at atmospheric pressure . . . . .	309
95	Adiabatic and polytrophic changes of gases for $p_1/p_2 < 1$ . . . . .	310
96	Heating values of gases. . . . .	311
96-2	Heating values of some technical gaseous heating fuels . . . . .	311

## UNITS AND MEASURES

97	Prefixes denoting decimal multiples or submultiples . . . . .	315
98	Powers of ten . . . . .	315
99	Basic units of the International System of Units—SI . . . . .	316
100	Supplementary units of the International System of Units—SI . . . . .	316
101	Derived units of the International System of Units—SI . . . . .	317
102-1	Conversion factors for units of length . . . . .	320
102-2	Metric units of length . . . . .	321
103	Angular measure equivalents: Conversion factors for angular units. . . . .	321
104-1	Conversion factors for units of area . . . . .	322
104-2	Metric units of area . . . . .	323
105	Conversion factors for units of solid angles . . . . .	323
106-1	Conversion factors for units of volume and capacity. . . . .	324
106-2	Metric units of volume and capacity . . . . .	325
106-3	Relationship between UK and US units of volume . . . . .	325
107	Specific volume equivalents: Conversion factors for units of specific volume. . . . .	325
108	Conversion factors for units of velocity . . . . .	326
109	Conversion factors for units of angular velocity . . . . .	327
110	Conversion factors for units of weight density . . . . .	327
111-1	Conversion factors for units of mass . . . . .	328
111-2	Metric units of mass . . . . .	330
111-3	Relationship between metric and chemical units of mass . . . . .	330
112	Conversion factors for units of density . . . . .	331
113	Conversion factors for units of mass per unit length . . . . .	332
114	Conversion factors for units of mass per unit area . . . . .	332
115	Conversion factors for units of mass rate of flow. . . . .	333
116	Conversion factors for units of volume rate of flow . . . . .	334
117-1	Conversion factors for units of force. . . . .	335

117-2	Relations between the units of force: Newton, sthene, and dyne. . . . .	335
118	Conversion factors for units of torque . . . . .	336
119	Conversion factors for units of pressure and stress . . . . .	337
120	Conversion factors for units of mass moment inertia. . . . .	339
121	Conversion factors for units of dynamic viscosity. . . . .	340
122	Conversion factors for units of kinematic viscosity. . . . .	341
123-1	Conversion factors for units of energy . . . . .	342
123-3	Equivalents of energy units: Joule, watthour, and their multiples . . . . .	344
124	Conversion factors for units of specific energy (mass basis) . . . . .	344
125-1	Conversion factors for units of specific heat . . . . .	345
125-2	Relations between the units: Kilomole, standard cubic meter, and kilogram . . . . .	346
126	Conversion factors for units of specific energy (volume basis) . . . . .	346
127-1	Conversion factors for units of power . . . . .	347
127-2	Heat flow rate equivalents . . . . .	348
128	Conversion factors for units of heat (rate). . . . .	349
129	Conversion factors for units of thermal conductivity. . . . .	349
130	Conversion factors for units of heat conductance and transmittance. . . . .	350
131	Conversion factors for units of the radiation constant . . . . .	350
132	Equivalents of temperature units . . . . .	351
133	Some characteristic temperatures. . . . .	351
134	Temperature conversion table. . . . .	352
135	Temperature conversion table, Celsius and Fahrenheit. . . . .	353
136	Fourth power of absolute temperature $(T/100)^4$ . . . . .	354
137	Some dimensionless numbers . . . . .	356

## CHARTS

1-a	Water, up to 1000°C and 1000 atm at constant volume (isochor lines) . . . . .	Inside back cover
1-b	Water, up to 1000°C and 950 bar at constant volume (isochor lines) . . . . .	Inside back cover
2-a	Ammonia, up to critical conditions. . . . .	359
2-b	Ammonia, at 0°C, $i'_0 = 0.5$ MJ/kg, $s'_0 = 2.0$ kJ K . . . . .	360
3-a	Dichlorodifluoromethane "Freon 12" . . . . .	363
3-b	Dichlorodifluoromethane "Freon 12" at 0°C. . . . .	367
4	Monochlorodifluoromethane "Freon 22" at 0°C. . . . .	370
5	Ethane at 0°C, $i'_0 = 100$ kcal/kg, $s'_0 = 1$ kcal/kg K. . . . .	372
6	Methyl chloride at 0°C, $i'_0 = 100$ kcal/kg, $s'_0 = 1$ kcal/kg K. . . . .	374
7	Trichloromonofluoromethane "Freon 11" at 0°C, $i'_0 = 100$ kcal/kg, $s'_0 = 1$ kcal/kg K . . . . .	375
8	Propane at 0°C, $i'_0 = 100$ kcal/kg, $s'_0 = 1$ kcal/kg K . . . . .	376
9	Sulfur dioxide at 0°C, $i'_0 = 100$ kcal/kg, $s'_0 = 1$ kcal/kg K. . . . .	378
10	Monochlorotrifluoromethane "Freon 13" at 0°C, $i'_0 = 100$ kcal/kg, $s'_0 = 1$ kcal/kg K. . . . .	380
11	Carbon dioxide, at 0°C, $i'_0 = 100$ kcal/kg, $s'_0 = 1$ kcal/kg K. . . . .	382
12-a	Moist air at $p = 760$ mm Hg. . . . .	384
12-b	Moist air at $p = 1$ bar. . . . .	386

## INDEX

Solids. . . . .	387
Liquids. . . . .	389
Vapors . . . . .	390
Gases. . . . .	390
Units and Measures. . . . .	391
