

CONTENTS

THERMODYNAMIC PROPERTIES 1

1.1 Introduction. 1.2 Working Substance. 1.3 The System. 1.4 The Pure Substance. 1.5 Phases. 1.6 Properties and State. 1.7 Systems of Units. 1.8 Weight. 1.9 Mass. 1.10 Specific Volume and Density. 1.11 Specific Weight. 1.12 Pressure—Kinetic Theory. 1.13 Fluid Pressure. 1.14 Manometers. 1.15 Archimedes Principle. 1.16 Temperature—With a Microscopic View. 1.17 Scales of Temperature. 1.18 Zeroth Law. 1.19 Measuring Temperature. 1.20 Processes and Cycles. 1.21 Conservation of Mass. 1.22 Closure.

ENERGY, ITS CONSERVATION 19

2.1 Introduction. 2.2 Relation of Mass and Energy. 2.3 Measuring Energy. 2.4 Gravitational Potential Energy. 2.5 Mechanical Kinetic Energy. 2.6 Internal Energy. 2.7 Work. 2.8 Work on a Moving Boundary of a System. 2.9 Work Depends upon the Path. 2.10 Example—Work of Nonflow Process. 2.11 Elastic Work. 2.12 Surface Tension. 2.13 Electrical Work. 2.14 Example. 2.15 Generalized Work Equation. 2.16 Flow Work. 2.17 Heat—A Microscopic Look. 2.18 Other Forms of Energy. 2.19 Conservation of Energy. 2.20 Closed Systems. 2.21 First Law of Thermodynamics. 2.22 Stored Energy Is a Property. 2.23 Energy Equation for Closed Systems. 2.24 Open Systems and Steady Flow. 2.25 Enthalpy. 2.26 Energy Balance for Steady Flow. 2.27 Applications of the Steady-Flow Equation. 2.28 Boundaries of the System. 2.29 Example—Air Compressor. 2.30 Perpetual Motion of the First Kind. 2.31 Closure.

ENERGY AND PROPERTY RELATIONS 47

3.1 Introduction. 3.2 Equilibrium. 3.3 Reversibility. 3.4 Constant Volume Specific Heat. 3.5 Constant Pressure Specific Heat. 3.6 Ratio of Specific Heats. 3.7 Specific Heats for an Ideal Gas. 3.8 Microscopic Aspects of Specific Heat. 3.9 Accounting for the Variation of Specific Heats. 3.10 Entropy. 3.11 Example—Entropy Change. 3.12 Mean Specific Heats. 3.13 Property Relations from Energy Equations. 3.14 Matter

Crossing More Than Two Boundaries. 3.15 Frictional Energy. 3.16 Energy Equation for Flow of Incompressible Fluids. 3.17 Incompressible Flow Through Fan or Pump. 3.18 Closure.

THE IDEAL GAS 67

4.1 Introduction. 4.2 Boyle's Law. 4.3 Charles' Law. 4.4 Avogadro's Law. 4.5 The Equation of State. 4.6 The Gas Constant. 4.7 Joule's Law. 4.8 Specific Heats of an Ideal Gas. 4.9 Example. 4.10 Dalton's Law of Partial Pressure. 4.11 The Joule-Thomson Experiment. 4.12 Third Law of Thermodynamics. 4.13 Entropy of an Ideal Gas. 4.14 Example—Irreversible Mixing of Gases. 4.15 Approximate Entropy Change of a Liquid. 4.16 Gas Tables. 4.17 Example—Gas Table Properties. 4.18 Closure.

PROCESSES WITH APPLICATIONS TO IDEAL GASES 82

5.1 Introduction. 5.2 Isometric Process. 5.3 Example—Irreversible Constant Volume. 5.4 Isobaric Process. 5.5 Example—Isobaric Process. 5.6 Example—Irreversible Constant Pressure. 5.7 Steady Flow with $\Delta K = 0$, $\Delta P = 0$, $W = 0$. 5.8 Isothermal Process. 5.9 Isentropic Process. 5.10 Adiabatic Processes, Reversible and Irreversible. 5.11 Engine and Nozzle Efficiencies and Some Ratios. 5.12 Example—Reversible and Irreversible Adiabatics. 5.13 Example—Isentropic Process with Variable Specific Heats. 5.14 Polytropic Process. 5.15 Example, Polytropic Process—Solutions with Constant k and by Gas Table. 5.16 Curves for Different Values of n . 5.17 Example—Energy Balances. 5.18 Gas Compressors. 5.19 Free Air. 5.20 Volumetric Efficiency. 5.21 Displacement Volume. 5.22 Compressor Efficiency. 5.23 Example—Air Compressor. 5.24 Example—Final State and Entropy Change from Efficiency. 5.25 Stagnation Properties and Mach Number. 5.26 Example—Stagnation Properties. 5.27 Energy Equation for an Open System with Variable Flows. 5.28 Flow from a Constant Volume. 5.29 Example—Gas Flowing Out of Tank. 5.30 Entropy Change in a Control Volume, Pure Substance in Transient Process. 5.31 Example—Entropy, Unsteady Flow. 5.32 Closure.

CYCLES 116

6.1 Introduction. 6.2 Expansible Fluid in a Heat Engine. 6.3 Cycle Work, Thermal Efficiency, and Heat Rate. 6.4 The Carnot Cycle. 6.5 Thermodynamic Temperature. 6.6 Carnot Cycle with Ideal Gas. 6.7 Cycle Work by $\oint p dV$ or $-\oint V dp$. 6.8 Mean Effective Pressure. 6.9 Analysis of Cycles. 6.10 Example—Carnot Cycle. 6.11 Stirling Cycle. 6.12 Ericsson Cycle. 6.13 Reversed and Reversible Cycles. 6.14 Reversed Carnot Cycle. 6.15 Example—Cycle Analysis. 6.16 Reversible Engine Most Efficient. 6.17 Closure.

ENTROPY AND THE CONSEQUENCES OF THE SECOND LAW 134

7.1 Introduction. 7.2 Statements of the Second Law of Thermodynamics. 7.3 Clausius Inequality. 7.4 Entropy from the Second Law. 7.5 Entropy Production. 7.6 Example—

Entropy Production Within a System. 7.7 Availability, Closed System. 7.8 Availability, Steady-Flow System. 7.9 Irreversibility. 7.10 Irreversibility of Closed System. 7.11 Irreversibility of a Steady-Flow System. 7.12 Available Portion of Heat. 7.13 Example—Irreversibility of an Adiabatic Process. 7.14 Example—Irreversibility of a Heat Exchange with Sink. 7.15 Example—Irreversibility Because of a Heat Exchange. 7.16 General Remarks About Entropy, Availability, and Irreversibility. 7.17 Entropy Change, Open System. 7.18 Example—Mechanical Losses. 7.19 Example—Irreversibility of Flow in Pipe. 7.20 Example—Entropy Production for Transient Change. 7.21 Second Law Analysis. 7.22 Helmholtz and Gibbs Functions. 7.23 Heat of Reaction. 7.24 Example—Entropy Change in a Chemical Reaction. 7.25 Example—Heat, Entropy, and Work of a Chemical Reaction. 7.26 Quantitative Consideration of Equilibrium. 7.27 Fuel Cells. 7.28 Second Law and Probability. 7.29 Perpetual Motion of the Second Kind. 7.30 The Sink. 7.31 Closure.

TWO-PHASE SYSTEMS OF A PURE SUBSTANCE 166

8.1 Introduction. 8.2 Changes of Phase at Constant Pressure. 8.3 Vapor Tables. 8.4 Example—Internal Energy of Superheated Steam. 8.5 Compressed Liquid. 8.6 Examples—Comparison of Enthalpy Changes of Water During Compression. 8.7 Example—Absolute Entropy of Water. 8.8 Comparison of Liquid and Vapor Curves. 8.9 Thermodynamic Surfaces. 8.10 Phase Diagrams. 8.11 Phase Rule. 8.12 Processes of Vapors. 8.13 Isobaric Process. 8.14 Isometric Process. 8.15 Adiabatic Processes, Pure Substance. 8.16 Example—Isentropic Process. 8.17 Example—Irreversible Adiabatic. 8.18 Isothermal Process. 8.19 Polytropic Process. 8.20 Mollier Diagram. 8.21 Example—Losses in Pipeline. 8.22 Example—Losses in Pipeline, Continued. 8.23 Example—Transient Flow. 8.24 Example—Transient Flow. 8.25 Closure.

MIXTURES OF GASES AND VAPORS 191

9.1 Introduction. 9.2 Description of Mixtures. 9.3 Example. 9.4 Properties of a Mixture. 9.5 Mixtures of Gases with a Substance Undergoing Phase Change. 9.6 Dew Point. 9.7 Relative Humidity. 9.8 Humidity Ratio. 9.9 Adiabatic Saturation Process. 9.10 Wet-Bulb Temperature. 9.11 Psychrometric Chart. 9.12 Enthalpy and Entropy of Superheated Vapor at Low Pressure. 9.13 Example—Properties of Atmospheric Air. 9.14 Enthalpy, Internal Energy, and Total Heat of a Gas-Vapor Mixture. 9.15 Example. 9.16 Mixtures Other Than Air-Steam. 9.17 Example—Fuel-Air Mixture. 9.18 Example—Air Conditioning Process. 9.19 Example—Constant Volume Process. 9.20 Mixing Streams. 9.21 Closure.

IMPERFECT GASES 211

10.1 Introduction. 10.2 Equations of State. 10.3 van der Waals' Equation. 10.4 Use of an Equation of State for Property and Energy Changes. 10.5 Reduced Coordinates and Compressibility Factor. 10.6 Generalized Compressibility Chart. 10.7 Example—Volume Given. 10.8 Generalized Equations of State. 10.9 Example. 10.10 Enthalpy Deviation. 10.11 Entropy Deviation. 10.12 Example—Isothermal Process. 10.13 Example—Throttling Process. 10.14 Example—Isentropic Process. 10.15 Closure.

11 RELATIONS OF THERMODYNAMIC PROPERTIES 226

11.1 Introduction. 11.2 Basic Mathematical Needs. 11.3 Maxwell Relations. 11.4 Example—Change of Entropy, $T = C$, by Equation of State. 11.5 Clausius-Clapeyron Equation. 11.6 Example—Clapeyron Equation. 11.7 Coefficients and Moduli. 11.8 Example—Variation of Internal Energy with Pressure. 11.9 Example—Isothermal Work and Heat for a Solid. 11.10 Ideal-Gas Equation of State and the Coefficients. 11.11 General Equations for Change of Entropy. 11.12 Entropy Deviation. 11.13 Entropy Deviation by Corresponding States. 11.14 Example—Entropy of Compressed Water. 11.15 Change of Entropy with Volume, $T = C$. 11.16 General Equation for Change of Internal Energy. 11.17 General Equation for Enthalpy Change. 11.18 Enthalpy Deviation. 11.19 Joule-Thomson Coefficient. 11.20 The Specific Heats. 11.21 Example—Difference of Specific Heats for a Solid. 11.22 The Energy Equations with Liquids or Solids. 11.23 Specific Heats of Solids. 11.24 Mixtures of Imperfect Gases. 11.25 Elastic System. 11.26 Paramagnetic System. 11.27 Reversible Cell. 11.28 Closure.

REACTIVE SYSTEMS 258

12.1 Introduction. 12.2 Fuels. 12.3 Analysis of Fuels. 12.4 Composition of Air. 12.5 Fuel Ratios. 12.6 Example—Combustion of Octane. 12.7 Example—Volume of Products. 12.8 Combustion in Excess and Deficient Air. 12.9 Example—Dew Point of H_2O in Products. 12.10 Example—Finding Air Required and Products from Combustion, Given the Gravimetric Analysis of Fuel. 12.11 Analyzing the Products of Combustion. 12.12 Example—Actual Air-Fuel Ratio. 12.13 Example—Air for Hydrocarbon of Unknown Composition. 12.14 Heats of Reactions. 12.15 Enthalpy of Combustion. 12.16 Enthalpy Change During Reaction. 12.17 Combustion Process, Random States. 12.18 Sensible Enthalpy of Liquid Octane. 12.19 Example—Temperature After Combustion, Ideal Diesel Engine. 12.20 Example—Availability and Irreversibility for Combustion. 12.21 Example—Fuel Cell Reaction. 12.22 Constant Volume Combustion. 12.23 Relation of Constant Pressure and Constant Volume Heating Values. 12.24 Example—Computing Heating Values at Constant Volume. 12.25 Heating Value at Other Than Standard Temperature. 12.26 Example—Enthalpy of Reaction at $0^\circ R$ Temperature. 12.27 Enthalpy of Formation. 12.28 Example—Temperature After Combustion, Diesel Engine. 12.29 Enthalpy of Formation from Heating Value. 12.30 Heating Value from Enthalpy of Formation. 12.31 Gibbs Function of Formation. 12.32 Reversible Reactions. 12.33 Condition for Chemical Equilibrium, Ideal Gases. 12.34 Example—Dissociation of CO_2 . 12.35 Example—Effect of Pressure on Dissociation of CO_2 . 12.36 Example—Dissociation of H_2O . 12.37 van't Hoff Equilibrium Box. 12.38 Equilibrium Constant. 12.39 Example—Equilibrium Constant from ΔG_f . 12.40 Example—Adiabatic Flame Temperature with Dissociation. 12.41 Fugacity and Activity. 12.42 Chemical Potential. 12.43 Closure.

POWER FROM TWO-PHASE SYSTEMS 298

13.1 Introduction. 13.2 Ideal Cycle, Ideal Engine. 13.3 Rankine Cycle and Engine. 13.4 Rankine Efficiencies—With Steam Rates. 13.5 Example—Rankine Engine. 13.6 Improving the Thermal Efficiency of Rankine Engine. 13.7 Incomplete-Expansion Engine and Cycle. 13.8 Regeneration. 13.9 Regenerative Cycle. 13.10 The Regenerative Engine. 13.11 Reheat-Regenerative Cycle and Engine. 13.12 Closed Feedwater Heaters. 13.13 Binary Vapor Cycles. 13.14 Closure.

REVERSED CYCLES 317 14

14.1 Introduction. 14.2 The Reversed Carnot Cycle. 14.3 Conclusions from the Carnot Cycle. 14.4 Unit for Refrigerating Effect. 14.5 Vapor Compression Refrigeration. 14.6 Displacement of the Compressor. 14.7 Example. 14.8 Refrigerants. 14.9 Vacuum Refrigeration. 14.10 Example—Vacuum Refrigeration. 14.11 Absorption Systems of Refrigeration. 14.12 Gas Refrigerating Cycle. 14.13 Variations of Basic Refrigeration Cycles. 14.14 Cryogenics. 14.15 The Linde Liquefier. 14.16 Claude Liquefier. 14.17 Minimum Work for Liquefying Gases. 14.18 Stage Compression. 14.19 Separation of Binary Mixtures. 14.20 Closure.

GAS TURBINES AND JET PROPULSION 340

15.1 Introduction. 15.2 Steady-Flow Brayton Cycle. 15.3 Intermediate Temperature for Maximum Work. 15.4 Gas Turbine with Fluid Friction. 15.5 Example—Gas Turbine With and Without Friction, Air Standard. 15.6 Energy Balance for Combustor. 15.7 Example—Combustor. 15.8 Ideal Cycle with Ideal Regenerative Heating. 15.9 Effectiveness of Regenerator. 15.10 Other Variations of the Brayton Cycle. 15.11 Jet Propulsion. 15.12 Work from the Impulse-Momentum Principle. 15.13 Maximum Power. 15.14 Ram Effects. 15.15 Performance Parameters for Jet Engines. 15.16 Ramjets. 15.17 Rockets. 15.18 Closure.

INTERNAL COMBUSTION ENGINES 366 16

16.1 Introduction. 16.2 The Otto Cycle. 16.3 Ideal Standards of Comparison. 16.4 Example—Air-Standard Otto Cycle. 16.5 Energy Considerations of the Open Otto Cycle. 16.6 Example—Computing the Size of Engine. 16.7 Diesel Cycle. 16.8 The Ideal Open-Cycle Diesel. 16.9 Example—Diesel Cycle. 16.10 Second Law Analysis. 16.11 Dual Combustion Cycle. 16.12 Variations in Actual Engines. 16.13 Closure.

**WORK FROM NUCLEAR ENERGY AND BY
DIRECT CONVERSION 380**

17.1 Introduction. 17.2 Structure of an Atom. 17.3 Radioactivity. 17.4 Converting Mass into Energy by Fission. 17.5 Example—Mass Defect. 17.6 The Chain Reaction. 17.7 The Reactor. 17.8 Classification of Solids. 17.9 Intrinsic and Extrinsic Semiconductors. 17.10 Photovoltaic Cell. 17.11 Seebeck Effect. 17.12 Peltier Effect. 17.13 Thomson Effect. 17.14 Thermoelectric Generator. 17.15 Thermionic Emission. 17.16 Basic Concept of Operation of MHD Converter. 17.17 Closure.

FLOW THROUGH NOZZLES AND DIFFUSERS 399

18.1 Introduction. 18.2 Tools for the Study. 18.3 Acoustic Speed. 18.4 Isentropic Flow with Varying Area. 18.5 Mass Rate of Flow Through a Nozzle. 18.6 Critical Pressure Ratio. 18.7 Correction for Initial Velocity. 18.8 Efficiency and Coefficients for

Nozzle. 18.9 Example—Elementary Design Calculations and Variation of Velocity, Specific Volume, and Area of Section, Ideal Gas. 18.10 Example—Equilibrium Flow in Steam Nozzle. 18.11 Supersaturated Flow. 18.12 Example—Supersaturated Flow. 18.13 Flow from Nozzles with Varying Pressure Ratios. 18.14 Diffuser. 18.15 Example—Diffuser. 18.16 Approximate Equations for a Small Pressure Change. 18.17 The Venturi. 18.18 Example—Venturi. 18.19 Flow Nozzle, Orifice, and Pitot Tube. 18.20 Closure.

19 SOME EQUIPMENT RELATED TO THERMODYNAMICS 421

19.1 Introduction. 19.2 Compressors and Blowers. 19.3 Central-Station Power Plant. 19.4 Steam Generators. 19.5 Air Preheaters and Economizers. 19.6 Condensers. 19.7 Separators. 19.8 Ejectors. 19.9 Refrigerating Assembly for Air Conditioning. 19.10 Gas Turbine. 19.11 Internal Combustion Engines.
