## Chapter 14. Equilibrium and Stability

14.1 Thermodynamic characteristics of equilibrium states . . . . .	1
14.2 Mathematical criterion of equilibrium . . . . .	2
14.3 Examples on the determination of the conditions of equilibrium . . . . .	4
14.3.1 <i>Thermal equilibrium</i> . . . . .	4
14.3.2 <i>Mechanical equilibrium</i> . . . . .	7
14.3.3 <i>Diffusion</i> . . . . .	9
14.3.4 <i>Performance of work</i> . . . . .	10
14.3.5 <i>General case</i> . . . . .	11
14.3.6 <i>Concluding remarks</i> . . . . .	12
14.4 Alternative, equivalent extremum principles . . . . .	13
14.4.1 <i>Thermal equilibrium</i> . . . . .	15
14.5 Virtual displacements and additional criteria for equilibrium. . . . .	17
14.5.1 <i>Classes of equilibrium</i> . . . . .	17
14.5.2 <i>The case where <math>E = \text{const}</math> and <math>V = \text{const}</math></i> . . . . .	19
14.5.3 <i>The case where <math>S = \text{const}</math> and <math>V = \text{const}</math></i> . . . . .	20
14.5.4 <i>The case where <math>S = \text{const}</math> and <math>P = \text{const}</math></i> . . . . .	20
14.5.5 <i>The case where <math>T = \text{const}</math> with <math>V = \text{const}</math> or <math>P = \text{const}</math></i> . . . . .	20
14.6 Intrinsic stability of pure substances . . . . .	21
14.7 A different mathematical form of the condition of stability . . . . .	25
14.8 A special case . . . . .	26
14.9 The Unified Principle of thermodynamics due to G. N. Hatsopoulos and J. H. Keenan . . . . .	27
List of Symbols for Chapter 14. . . . .	28

## Chapter 15. Introduction to Statistical Thermodynamics. Mechanical Models

15.1 Prefatory remarks . . . . .	30
15.2 Mechanical models . . . . .	32
15.2.1 <i>Number and nature of elementary particles</i> . . . . .	32
15.2.2 <i>Intermolecular force potential</i> . . . . .	33

<i>15.2.3 Mechanical model of a pure substance . . . . .</i>	36
<i>15.2.4 Empirical expressions for the intermolecular force potential . . . . .</i>	38
<i>15.2.5 The mechanical model for a perfect gas . . . . .</i>	41
<i>15.2.6 Number of degrees of freedom . . . . .</i>	42
<i>15.2.7 Energy of a molecule . . . . .</i>	45
<i>15.2.8 The mechanical model for a perfect crystal . . . . .</i>	46
<i>15.2.9 Mechanical models for liquids . . . . .</i>	46
<b>List of Symbols for Chapter 15. . . . .</b>	47
<b>Chapter 16. Quantum Mechanics</b>	48
<i>16.1 Description of the motion . . . . .</i>	48
<i>16.2 The physical basis of quantum mechanics . . . . .</i>	49
<i>16.3 The wave function . . . . .</i>	50
<i>16.4 The mathematical basis of quantum mechanics. Schrödinger's equation . . . . .</i>	52
<i>16.5 Stationary states. Schrödinger's time-independent equation . . . . .</i>	56
<i>16.6 Complementarity and Heisenberg's uncertainty principle . . . . .</i>	58
<i>16.7 Translational motion of a single, independent molecule . . . . .</i>	60
<i>16.8 Particle in a container . . . . .</i>	66
<i>16.9 Two identical particles in a container . . . . .</i>	69
<i>16.10 Quantization of rotation. . . . .</i>	71
<i>16.11 Quantization of vibration . . . . .</i>	79
<i>16.12 Collection of independent particles . . . . .</i>	83
<i>16.13 Spin . . . . .</i>	85
<i>16.14 Density of quantum cells in phase space . . . . .</i>	85
<i>16.15 Spectroscopy . . . . .</i>	90
<i>16.16 Summary of results from quantum mechanics . . . . .</i>	92
<b>List of Symbols for Chapter 16. . . . .</b>	94
<b>Chapter 17. Foundations of Statistical Thermodynamics</b>	97
<i>17.1 Introductory remarks . . . . .</i>	97
<i>17.2 The statistical method . . . . .</i>	98
<i>    17.2.1 Basic statistical concepts . . . . .</i>	100
<i>    17.2.2 Several random variables; functions of random variables . . . . .</i>	105
<i>    17.2.3 Formation of averages . . . . .</i>	107
<i>    17.2.4 Variance and standard deviation . . . . .</i>	108
<i>    17.2.5 Continuous probability functions; probability density . . . . .</i>	109
<i>17.3 Gibbsian ensembles . . . . .</i>	110

---

17.4 Liouville's equation . . . . .	114
17.4.1 <i>The canonical equations of motion</i> . . . . .	114
17.4.2 <i>Probability density</i> . . . . .	115
17.4.3 <i>Liouville's theorem</i> . . . . .	116
17.4.4 <i>Geometrical interpretation of Liouville's theorem</i> . . . . .	117
17.4.5 <i>Sufficient conditions for an ensemble to be stationary</i> . . . . .	119
17.4.6 <i>Concluding remarks</i> . . . . .	119
17.5 Geometrical structure of the statistical sample space . . . . .	120
17.6 Relation between theories based on different ensembles . . . . .	121
17.7 Microcanonical ensemble . . . . .	121
17.8 Canonical ensemble . . . . .	122
17.9 Grand canonical ensemble . . . . .	123
17.10 Statistical interpretation of entropy . . . . .	124
17.11 Method of the most probable distribution . . . . .	127
17.11.1 <i>Distribution</i> . . . . .	128
17.11.2 <i>Averages and probability functions</i> . . . . .	130
17.11.3 <i>The most probable distribution</i> . . . . .	131
17.11.4 <i>Mathematical form of the probability function</i> . . . . .	132
17.11.5 <i>Canonical ensemble</i> . . . . .	135
17.12 Partition function . . . . .	136
17.13 Change in the partition function during a reversible process	138
17.14 Comparison with classical thermodynamics . . . . .	140
17.15 Explicit formulas; chemical potential . . . . .	143
17.16 Boltzmann's principle . . . . .	145
17.17 The laws of thermodynamics . . . . .	147
17.17.1 <i>The second part of the Second Law of thermodynamics</i>	147
17.17.2 <i>Third Law of thermodynamics</i> . . . . .	149
17.17.3 <i>Concluding remarks</i> . . . . .	151
17.18 Summary . . . . .	151
List of Symbols for Chapter 17 . . . . .	153
Chapter 18. Marginal Notes and Addenda . . . . .	156
18.1 Combinatorial formulas . . . . .	156
18.1.1 <i>Ordered sequences</i> . . . . .	156
18.1.2 <i>Distributions of <math>N</math> elements over <math>k</math> containers</i> . . . . .	157
18.1.3 <i>Very large numbers</i> . . . . .	159
18.1.4 <i>Significance of the constraint arising from a prescribed value of energy</i>	163
18.2 The method of Lagrange's undetermined multipliers . . . . .	165

---

18.3 On approximating a series by an integral . . . . .	167
18.3.1 <i>The Stirling approximation</i> . . . . .	169
18.3.2 <i>Evaluation of a sum of exponentials</i> . . . . .	170
18.4 The method of the most probable distribution . . . . .	171
18.4.1 <i>Collection of subsystems</i> . . . . .	171
18.4.2 <i>Grand canonical distribution</i> . . . . .	172
18.5 Ergodic conjecture . . . . .	173
18.6 The problem of irreversibility . . . . .	175
List of Symbols for Chapter 18. . . . .	175

**Chapter 19. Properties of Perfect Gases and Perfect Crystals**

19.1 Method . . . . .	177
19.2 The properties of crystalline solids . . . . .	178
19.2.1 <i>The Einstein solid</i> . . . . .	179
19.2.2 <i>Debye's theory</i> . . . . .	182
19.3 The partition function of a perfect gas . . . . .	185
19.3.1 <i>Number of microstates</i> . . . . .	188
19.4 Pressure and thermal equation of state of a perfect gas	190
19.5 The classical partition function . . . . .	193
19.6 Equipartition of energy in classical statistical mechanics	195
19.7 The Maxwellian velocity distribution . . . . .	198
19.8 Monatomic gases . . . . .	201
19.9 Entropy and the Sackur–Tetrode equation . . . . .	203
19.9.1 <i>Effect of the factorial correction term</i> . . . . .	204
19.9.2 <i>The entropy of a perfect gas near absolute zero</i> . . . . .	204
19.9.3 <i>Comparison with previous formulas</i> . . . . .	206
19.10 Internal degrees of freedom . . . . .	209
19.10.1 <i>Rotational degrees of freedom</i> . . . . .	209
19.10.2 <i>Hydrogen and its isotopes</i> . . . . .	211
19.10.3 <i>Vibrational degrees of freedom</i> . . . . .	213
19.10.4 <i>The electronic partition function</i> . . . . .	215
19.11 Summarizing remarks . . . . .	217
19.12 Mixtures of chemically inert perfect gases . . . . .	218
19.13 Postscript . . . . .	222
List of Symbols for Chapter 19. . . . .	223

**Chapter 20. Pure Substances in a Single Phase**

20.1 Summary of contents . . . . .	226
20.2 Perfect-gas approximation and real gases	226

---

20.3 Thermal equations of state . . . . .	227
20.3.1 <i>Virial expansions</i> . . . . .	229
20.3.2 <i>The Boyle temperature</i> . . . . .	232
20.4 The van der Waals equation . . . . .	234
20.4.1 <i>Microscopic interpretation of the van der Waals equation</i> . . . . .	234
20.4.2 <i>The van der Waals isotherms</i> . . . . .	236
20.4.3 <i>Evaporation and metastable states; negative pressures in liquids</i> . . . . .	237
20.4.4 <i>Maxwell's lever rule</i> . . . . .	238
20.4.5 <i>Comparison with experiment</i> . . . . .	239
20.5 The law of corresponding states . . . . .	239
20.5.1 <i>Statements of the principle</i> . . . . .	239
20.5.2 <i>The law of corresponding states in statistical thermodynamics</i> . . . . .	241
20.5.3 <i>Comparison with experiment</i> . . . . .	241
20.6 Asymptotic properties of real gases . . . . .	245
20.6.1 <i>The Joule-Thomson coefficient</i> . . . . .	245
20.6.2 <i>The Washburn experiment</i> . . . . .	246
20.6.3 <i>Resolution of the paradox</i> . . . . .	247
20.6.4 <i>Real-gas limits for the Joule-Thomson, Washburn and Joule coefficients</i> . . . . .	248
20.6.5 <i>Real-gas limit for enthalpy and entropy</i> . . . . .	249
20.7 Properties of real gases . . . . .	250
20.7.1 <i>Internal energy and enthalpy</i> . . . . .	250
20.7.2 <i>Entropy</i> . . . . .	252
20.7.3 <i>Spectroscopic and calorimetric entropy</i> . . . . .	253
20.8 Tables of properties . . . . .	254
20.9 Deviation functions . . . . .	255
20.9.1 <i>Fugacity</i> . . . . .	257
20.10 Corrections for gas thermometers . . . . .	261
20.10.1 <i>Constant-volume thermometer</i> . . . . .	261
20.10.2 <i>Constant-pressure thermometer</i> . . . . .	262
20.11 The properties of liquids and solids subjected to uniform pressure . . . . .	262
List of Symbols for Chapter 20. . . . .	269
<b>Chapter 21. Chemical Equilibrium in a Single Phase</b>	271
21.1 Introductory remarks . . . . .	271
21.2 The concept of chemical equilibrium . . . . .	271
21.3 Significance of the chemical formula . . . . .	273
21.4 Extent and degree of reaction . . . . .	274
21.5 Several simultaneous reactions . . . . .	277

---

<b>21.6 General conditions of equilibrium . . . . .</b>	<b>280</b>
<i>21.6.1 Chemical work . . . . .</i>	<i>283</i>
<i>21.6.2 Equilibrium . . . . .</i>	<i>287</i>
<i>21.6.3 Several independent reactions . . . . .</i>	<i>289</i>
<b>21.7 Formal derivation of the Gibbs equation . . . . .</b>	<b>291</b>
<b>21.8 Maxwell's relations and the Gibbs–Duhem–Margules relation</b>	<b>294</b>
<b>21.9 Law of mass action for a single reaction in a gaseous phase . . . . .</b>	<b>296</b>
<i>21.9.1 Pressure dependence of the equilibrium constant . . . . .</i>	<i>300</i>
<i>21.9.2 Temperature dependence of the equilibrium constant . . . . .</i>	<i>301</i>
<i>21.9.3 Affinity . . . . .</i>	<i>303</i>
<b>21.10 The Principle of Spite (Le Chatelier and Braun) . . . . .</b>	<b>303</b>
<b>21.11 Dilute solutions . . . . .</b>	<b>304</b>
<b>21.12 Several reactions . . . . .</b>	<b>306</b>
<b>21.13 The presence of an inert component . . . . .</b>	<b>306</b>
<b>21.14 The presence of a solid or liquid reactant in excess . . . . .</b>	<b>307</b>
<b>21.15 The burning of coal . . . . .</b>	<b>310</b>
<b>21.16 Chemical equilibria in nonideal systems . . . . .</b>	<b>313</b>
<b>21.17 Chemical relaxation . . . . .</b>	<b>315</b>
<b>21.18 Statistical form of the law of mass action . . . . .</b>	<b>318</b>
<b>21.19 Dissociation . . . . .</b>	<b>322</b>
<b>21.20 Ionization: the Saha equation . . . . .</b>	<b>324</b>
<b>21.21 Plasmas . . . . .</b>	<b>325</b>
<b>List of Symbols for Chapter 21 . . . . .</b>	
<b>Chapter 22. Equilibria in Heterogeneous Systems</b>	<b>329</b>
<b>22.1 Phase transitions in a one-component system . . . . .</b>	<b>330</b>
<i>22.1.1 The Clausius–Clapeyron equation . . . . .</i>	<i>331</i>
<i>22.1.2 Thermodynamic temperature . . . . .</i>	<i>334</i>
<i>22.1.3 Additional form of analogy between phase transition and chemical reaction . . . . .</i>	<i>336</i>
<b>22.2 Several phases . . . . .</b>	<b>336</b>
<b>22.3 Affinity. Higher-order transitions . . . . .</b>	<b>336</b>
<b>22.4 Nernst's distribution law . . . . .</b>	<b>341</b>
<b>22.5 Heterogeneous systems . . . . .</b>	<b>343</b>
<i>22.5.1 Duhem's theorem . . . . .</i>	<i>345</i>
<i>22.5.2 Gibbs's phase rule . . . . .</i>	<i>347</i>
<i>22.5.3 Phase transitions in inert systems . . . . .</i>	<i>349</i>
<b>22.6 The Kelvin–Helmholtz formula . . . . .</b>	<b>349</b>
<b>List of Symbols for Chapter 22 . . . . .</b>	

<b>Chapter 23. The Third Law of Thermodynamics</b>	356
23.1 Tabulation of equilibrium functions, I . . . . .	356
23.1.1 <i>Normalization of standard Gibbs function</i> . . . . .	357
23.1.2 <i>Normalization of standard heat of reaction at zero pressure</i> . . . . .	358
23.1.3 <i>Normalization of standard entropy</i> . . . . .	359
23.2 The Third Law of thermodynamics . . . . .	360
23.2.1 <i>The Gibbs–Helmholtz relations</i> . . . . .	360
23.2.2 <i>Direct measurement of reversible work</i> . . . . .	361
23.2.3 <i>Experimental justification for the Third Law of thermodynamics</i> . . . . .	363
23.2.4 <i>The Third Law of thermodynamics</i> . . . . .	364
23.2.5 <i>Surface of states in the neighborhood of absolute zero</i> . . . . .	366
23.2.6 <i>Some consequences of the Third Law of thermodynamics</i> . . . . .	368
23.2.7 <i>The unattainability of absolute zero</i> . . . . .	370
23.2.8 <i>The Carnot cycle at absolute zero</i> . . . . .	371
23.2.9 <i>The requirement of internal equilibrium</i> . . . . .	373
23.3 Tabulation of equilibrium functions, II . . . . .	374
23.3.1 <i>Enthalpy</i> . . . . .	375
23.3.2 <i>Spectroscopic and calorimetric entropy of a gas</i> . . . . .	376
23.3.3 <i>Absolute vapor-pressure curve</i> . . . . .	378
23.3.4 <i>The helium scales of temperature</i> . . . . .	380
23.4 The synthesis of diamonds from graphite . . . . .	381
List of Symbols for Chapter 23. . . . .	384
<b>Chapter 24. Irreversible Processes in Continuous Systems</b>	386
24.1 State of a continuous system . . . . .	387
24.2 Fundamental problem of continuum thermodynamics and an outline of its solution . . . . .	387
24.3 Notation . . . . .	389
24.4 The interaction vectors . . . . .	390
24.5 The First Law of thermodynamics for a continuous system in motion. . . . .	394
24.5.1 <i>Instantaneous acceleration in a flow field</i> . . . . .	394
24.5.2 <i>Reynolds's transport theorem</i> . . . . .	395
24.5.3 <i>System of constant mass</i> . . . . .	397
24.5.4 <i>Rate of change of volume</i> . . . . .	398
24.5.5 <i>The First Law in the absence of diffusion</i> . . . . .	399
24.5.6 <i>The First Law in the presence of diffusion</i> . . . . .	399
24.6 Simple example. Fourier's equation . . . . .	400
24.7 Summary of the method employed . . . . .	404
24.8 Conduction of heat through an anisotropic material; restricted form of Onsager's reciprocal relations . . . . .	406
24.9 The field of internal stresses . . . . .	408
24.9.1 <i>The Euler–Cauchy principle</i> . . . . .	408

24.9.2 The stress tensor . . . . .	409
24.9.3 Symmetry of the stress tensor; principal axes . . . . .	411
24.9.4 Stress deviator . . . . .	413
24.10 Cauchy's equations of motion . . . . .	413
24.11 The equation of kinetic energy . . . . .	415
24.12 The work-flux vector . . . . .	416
24.13 Local rate of strain in a velocity field . . . . .	416
24.14 Additivity of kinetic and potential energy . . . . .	424
24.15 Transformation of the work term in the moving coordinate system . . . . .	425
24.16 Thermodynamic foundations of fluid mechanics and heat transfer, I . . . . .	427
24.16.1 Equations of state . . . . .	427
24.16.2 Pure compression and expansion . . . . .	428
24.16.3 Bulk viscosity . . . . .	431
24.16.4 General motion . . . . .	432
24.17 Curie's principle for isotropic systems . . . . .	433
24.18 The Onsager–Casimir relations . . . . .	434
24.19 Thermodynamic foundations of fluid mechanics and heat transfer, II. The Navier–Stokes equations and the energy equation . . . . .	435
24.19.1 The phenomenological assumptions . . . . .	435
24.19.2 Thermodynamic pressure and bulk viscosity . . . . .	436
24.19.3 Stokes's hypothesis . . . . .	436
24.19.4 The Navier–Stokes equations; energy equation . . . . .	437
24.19.5 Shock waves . . . . .	438
24.20 Solid mechanics . . . . .	439
24.20.1 Components of infinitesimal strain . . . . .	439
24.20.2 Thermal equation of state of an elastic system . . . . .	441
24.20.3 Fundamental equation of state of an elastic system; strain energy .	442
24.20.4 Explicit form of the fundamental equation for an elastic system; internal energy and entropy . . . . .	443
24.20.5 Thermoelastic effect . . . . .	444
24.20.6 Fundamental equations of thermoelasticity . . . . .	445
24.20.7 Origin of viscoelasticity . . . . .	446
24.20.8 Plasticity, strain hardening, and the Bauschinger effect . . . . .	454
24.20.9 Remark concerning constitutive equations . . . . .	456
24.21 Limits of validity of the theory . . . . .	457
List of Symbols for Chapter 24 . . . . .	458
Tables . . . . .	461
