Preface to the First Edition	
Preface to the Second Edition	vii
Preface to the Third Edition	

CHAPTER

Conservation of Energy in Closed and Open Systems—

1. Isolated, Closed, and Open Systems	3
2. Extensive and Intensive Properties	3
3. Conservation of Mass in Closed Systems	4
4. Conservation of Mass in Open Systems	6

CHAPTER II

Conservation of Energy in Closed and Open Systems— The First Principle of Thermodynamics

1. Functions of State	8
2. Conservation of Energy—The First Principle of Thermodynamics	8
3. Enthalpy	10
4. Open Systems	11
5. Examples	12

CHAPTER III

Entropy Production—The Second Principle of Thermodynamics

1. Reversible and Irreversible Processes	14
2. Entropy	15
3. Entropy of One-Component Systems—Absolute Temperature	18
4. Entropy Production Due to Heat Flow	19
5. Entropy of Multicomponent Systems—Chemical Potentials	21

6. Entropy Production Due to Chemical Reactions— Affinity—Coupling of Chemical Reactions	23
7. Chemical Affinity	25
8. Entropy Production and Entropy Flow in Open Sys- tems.	28
9. Entropy Production Due to Electrochemical Reac- tions.	29
10. Entropy Production in Continuous Systems	32
11. Internal Degrees of Freedom	36

CHAPTER IV

General Statements Concerning Entropy Production and
Rates of Irreversible Processes

1. Transformation Properties of Rates and Affinities— Equivalent Systems	40
2. Rates and Affinities	44
3. Fluctuation Theory	47
4. Microscopic Reversibility and Onsager's Reciprocity Relations.	51
5. Symmetry Requirements on Coupling of Irreversible Processes.	53

CHAPTER V

The Phenomenological Laws—Interference of Irreversible
Processes

1. Domain of Validity of Phenomenological Laws— Chemical Reactions Near Equilibrium	55
2. Electrokinetic Effects—Saxen's Relation	61
3. Thermomolecular Pressure Difference and Thermo- mechanical Effect	65
4. Kinetic Interpretation of Heat of Transfer—Knudsen Gas	68
5. Diffusion—Einstein's Relation	71
6. Continuous and Discontinuous Formalism	73

CHAPTER VI

The Stationary Non-Equilibrium States

1. Thermodynamic Significance of Stationary Non-Equilibrium States	75
2. States of Minimum Entropy Production	76
3. Consecutive Chemical Reactions	77
4. More Complicated Systems of Chemical Reactions	80
5. Time Variation of Entropy Production—Stability of Stationary States	81
6. Entropy Flow in Stationary States	83
7. Time Variation of the Entropy	85
8. Stationary State Coupling of Irreversible Processes	87
9. Applications in Biology	91

CHAPTER VII

Non-linear Thermodynamics of Irreversible Processes

1. Introduction	93
2. Variation of the Entropy Production	95
3. Steady States and Entropy Production	99
4. Evolution Criterion and Velocity Potential	106
5. Rotation around Stationary States	111
6. Local Potentials and Fluctuations	112

CHAPTER VIII

Order and Dissipations

1. Introduction	117
2. Chemical Oscillations	120
3. Dissipative Structures	124
4. Symmetry Breaking Instabilities—The Turing Mechanism	127
5. General Comments	132
