

CONTENTS

CHAPTER I ELECTROMAGNETIC FUNDAMENTALS

1.01 MODERN Units and Their Development	1-1
1.02 Electrical Units	1-3
1.03 Field Equations	1-7
1.04 Complex Notation	1-13
1.05 Statics and the Thermionic Equations	1-15
1.06 Lenz's Law	1-19
1.07 Circuit Theory	1-19
1.08 Waves and Resonators	1-31
1.09 Transient Phenomena	1-47
Appendix The Poynting Vector	1-51

CHAPTER II MEASUREMENT OF VOLTAGE AND CURRENT

Part I DC Measurements

2.01 Moving-Coil Meters and Their Structure	2-1
2.02 Moving-Coil Voltammeters and Ammeters	2-2
2.03 Moving-Magnet Meter	2-6
2.04 Potentiometer	2-6
2.05 Vacuum-Tube Voltmeters	2-8
2.06 DC Measurements with the Oscilloscope	2-13

Part II AC Measurements at Low and Medium Frequencies

2.07 Transfer Instruments	2-14
2.08 Instrument Response Law	2-14
2.09 Electrodynamometer	2-17
2.10 Moving-Iron Instruments	2-18
2.11 Rectifier Instruments	2-23
2.12 Thermocouple Instruments	2-26
2.13 Vacuum-Tube Voltmeters	2-31
2.14 Electrostatic Voltmeters	2-42
2.15 Oscilloscopes	2-45
2.16 AC Potentiometers	2-47
2.17 Heterodyne Method	2-47

Part III AC Measurements in the VHF and UHF Frequency Ranges

2.18 Diode Voltmeters	2-47
2.19 Crystal Voltmeters	2-48
2.20 Oscillating-Ring Ammeter	2-48
2.21 Thermal Devices	2-50

CHAPTER IIIK MEASUREMENT OF POWER

3.01 Introduction	3-1
3.02 Power in AC circuits	3-1
3.03 Power in High- Frequency Circuits	3-3
3.04 General Considerations in the Measurement of Power	3-4
3.05 Power Measurements at DC	3-8
3.06 Electrodynamics Wattmeter	3-8
3.07 Electrostatic Wattmeter	3-12
3.08 Thermocouple Wattmeter	3-14
3.09 Vacuum-Tube Wattmeters	3-16
3.10 Cathode-Ray-Tube Wattmeter	3-21
3.11 Output-Power Meters	3-22
3.12 General Methods	3-24
3.13 Volume Level Measurements	3-26
3.14 Speech Power Analysis	3-28
3.15 Polyphase Power Measurements	3-28
3.16 Reactive Power	3-31
RF Power Measurements	
3.17 General Considerations	3-32
3.18 Thermal Devices and Techniques	3-34
3.19 Static Calorimetric Systems	3-35
3.20 Flow Calorimetric Systems	3-41
3.21 Medium and Low Power Flow Calorimeters	3-49
3.22 Bolometer Methods of Power Measurement	3-51
3.23 Bolometer Bridges	3-58
3.24 Errors in Bolometric Measurements	3-70
3.25 Bolometer Type Elements for “Feed-Through” Power Measurements	3-73
3.26 Thermocouples	3-75
3.27 Photometric Systems	3-77
3.28 Temperature-Limited Diodes	3-78
3.29 Mechanically Operated Devices	3-78
3.30 Electronic Devices	3-83
3.31 Measuring Systems	3-86
3.32 Directional Couplers	3-91
3.33 Peak Power Measurements	3-100
3.34 Comparison of RF Power Measurement Methods	3-105
Appendix A Commercial Calorimetric Power Meters	3-107
B Commercial Bolometer Mounts	3-107
C Commercial Peak Power Measurement Equipment	3-108

CHAPTER IV THE MEASSUREMENT OF EMPEDANCE AND CIRCUIT ELEMENTS

Part I The Determination of Lumped Constants	
4.01 The Measurement of Resistance at DC	4-1
4.02 High Resistance Measurements	4-6
Measurement of AC Impedance	
4.03 The Whetstone Bridge	4-8
4.04 Substitution Techniques in Bridge Measurements	4-17
4.05 Twin-T and Bridged-t Bridges	4-18
4.06 General Methods of Impedance Measurement	4-23
4.07 Self-Inductance Defined	4-34
4.08 Measurement Techniques for Evaluating Self-Inductance	4-34
4.09 Measurement of Incremental Inductance	4-38
4.10 Mutual Inductance Defined	4-40
4.11 Techniques for Measuring Mutual Inductance	4-40
4.12 Capacitance Defined	4-43
4.13 Techniques for the Measurement of Capacitance	4-44
4.14 Techniques for Measuring Very Small Capacitances	4-48
4.15 Distributed Coil Capacitance	4-51
4.16 Auxiliary Techniques for Measuring Effective Resistance	4-53
Part II The Determination of Impedance and Distributed Constants at Microwave Frequencies	
4.17 Representation of Two-Terminal (Terminating) Structures	4-57
4.18 Methods of Impedance Measurement – Two – Terminal Structures	4-60
4.19 Representation for Four – Terminal Networks	4-64
4.20 Utility of the Varicose representations	4-67
4.21 Three-Point Methods of Measurement	4-74
4.22 formulae for Parameters of Equivalent Tee (or Pi) Impedance (or Admittance) Representations	4-75
4.23 Formulae for Representation by Scattering Coefficients	4-76
4.24 Methods for Determination of the Tangent Relation Parameters D_o , S_o , and y	4-77
4.25 Semi-Precision Methods of Impedance Measurements (Lossless Networks)	4-79
4.26 Semi-Precision Methods – Dissipative Networks	4-83
4.27 Precision Methods of Measurement and Associated Representations – Loss-less Networks	4-9
4.28 Multi- Terminal Networks	4-101
4.29 Measurement of Nonreciprocal Networks	4-103
4.30 Special Instrumentation for Impedance Measurements	4-105
Appendix A Network Theory and Circuit Representations	4-117
B Determination of the Equivalent Circuit Parameters of A Four- Terminal Structure from Three Arbitrary Input – Output Measurements	4-125
CHAPTER V MEASUREMENT OF FREQUENCY AND WAVELENGTH	

5.01 Introduction	5-1
5.02 Frequency Standards	5-3
Measurement of Frequency at Very Low and Medium Frequencies	
5.03 Audible Methods	5-12
5.04 Meter Methods	5-13
5.05 Oscillographic Methods	5-24
5.06 Bridge Methods	5-25
5.07 Cycle Counting Methods	5-49
5.08 Stroboscopic Methods	5-60
5.09 Heterodyne and Interpolation Techniques	5-63
Measurement of Frequency at High and Microwave Frequencies	
5.10 Lumped-Circuit Resonance Methods	5-77
5.11 Standing Wave Methods of Wavelength Measurement	5-82
5.12 Coaxial-Line Wavemeters	5-92
5.13 Cavity Wavemeters	5-102
5.14 Measurement of Frequency by Comparison Against Microwave Frequency Standards	5-107
5.15 Interferometer Methods of Wavelength Measurement	5-115
INDEX (See end of Volume II)
