PREFACE	xi
Chapter 1 Elastic Properties	1
I. THEORETICAL BACKGROUND OF THE ELASTIC CONSTANT MEASUREMENTS	1
1. <i>Experimental Results and Interpretation</i>	3
2. <i>Temperature Dependence of the Elastic Moduli in Diamond</i>	17
Chapter 2 Thermal Properties	23
I. SPECIFIC HEAT AND THE DEBYE TEMPERATURE	23
II. EFFECT OF THE ISOTOPIC COMPOSITION OF A CRYSTAL LATTICE ON THE SPECIFIC HEAT	27
III. DEPENDENCE OF THE THERMAL CONDUCTIVITY OF DIAMOND, Ge, AND Si CRYSTALS ON ISOTOPIC COMPOSITION	28
1. <i>Historical Remarks</i>	28
2. <i>Theoretical Models</i>	32
3. <i>Experimental Results</i>	37
IV. DEPENDENCE OF THE LATTICE CONSTANT ON TEMPERATURE AND ISOTOPIC COMPOSITION	46
1. <i>Background</i>	46
Chapter 3 Vibrational Properties	57
I. THEORETICAL MODELS OF LATTICE DYNAMICS	57
1. <i>Formal Force Constants</i>	57
2. <i>Rigid-Ion Model (RIM)</i>	59
3. <i>Dipole Models (DMs)</i>	60
4. <i>Valence Force Field Model (VFFM)</i>	62
II. MEASUREMENT OF PHONON DISPERSION BY THE INELASTIC NEUTRON SCATTERING METHOD	63
III. RAMAN SPECTRA AND THE DENSITY OF PHONON STATES	73

Chapter 4 Raman Spectra of Isotopically Mixed Crystals	85
I. LOW CONCENTRATIONS: LOCALIZED, RESONANT, AND GAP MODES	85
II. HIGH CONCENTRATIONS: MIXED CRYSTALS	93
1. <i>Introductory Remarks</i>	93
2. <i>First-Order Raman Spectra</i>	93
3. <i>Second-Order Raman Spectra</i>	103
4. <i>Two-Mode Behavior of the LO Phonon: The Case of $\text{LiH}_x\text{D}_{1-x}$</i>	104
III. DISORDER EFFECTS IN RAMAN SPECTRA OF MIXED CRYSTALS	109
1. <i>Coherent-Potential-Approximation Formalism</i>	109
2. <i>Disorder Shift and Broadening of the Raman Spectra</i>	112
Chapter 5 Excitons in LiH Crystals	119
I. THE COMPARATIVE STUDY OF THE BAND-EDGE ABSORPTION IN LiH, Li_2O , LiOH , AND Li_2CO_3	119
II. EXCITON REFLECTION SPECTRA OF LiH CRYSTALS	122
III. BAND STRUCTURE OF LiH	126
IV. DIELECTRIC-METAL TRANSITION UNDER EXTERNAL PRESSURE	132
Chapter 6 Exciton-Phonon Interaction	135
I. INTERACTION BETWEEN EXCITONS AND NONPOLAR OPTICAL PHONONS	135
II. POLARIZATION INTERACTION OF FREE EXCITONS WITH PHONONS	136
III. EFFECTS OF TEMPERATURE AND PRESSURE ON EXCITON STATES	139
1. <i>Theoretical Background</i>	139
2. <i>Experimental Results</i>	146
IV. ISOTOPIC EFFECT ON ELECTRON EXCITATIONS	156
1. <i>Renormalization of Energy of Band-to-Band Transitions in the Case of Isotopic Substitution in LiH Crystals</i>	156
2. <i>The Dependence of the Energy Gaps of A_2B_6 and A_3B_5 Semiconducting Crystals on Isotope Masses</i>	158
3. <i>Renormalization of Binding Energy of Wannier-Mott Excitons by the Isotopic Effect</i>	168
4. <i>Luminescence of Free Excitons in LiH Crystals</i>	174
Chapter 7 Isotopic Effect in the Emission Spectrum of Polaritons	181
I. THEORY OF POLARITONS	181
II. EXPERIMENTAL RESULTS	186
III. RESONANCE LIGHT SCATTERING MEDIATED BY EXCITONIC POLARITONS IN LiH (LiD) CRYSTALS	190
Chapter 8 Isotopic Disorder of Crystal Lattices	195
I. MODELS OF DISORDER	195
II. EFFECTS OF A DISORDERED LATTICE ON THE ENERGY OF INTERBAND TRANSITIONS IN $\text{LiH}_x\text{D}_{1-x}$ CRYSTALS	199
III. BROADENING OF EXCITON GROUND STATE LINES IN MIRROR REFLECTION SPECTRUM OF $\text{LiH}_x\text{D}_{1-x}$ CRYSTALS	201

IV. NONLINEAR DEPENDENCE OF BINDING ENERGY ON ISOTOPE CONCENTRATION	203
V. EFFECTS OF DISORDERING ON FREE EXCITON LUMINESCENCE LINewidthS	204
Chapter 9 Future Developments and Applications	211
I. ISOTOPIC CONFINEMENT OF LIGHT	211
II. ISOTOPIC INFORMATION STORAGE	214
III. NEUTRON TRANSMUTATIONS	215
IV. ISOTOPIC STRUCTURING FOR FUNDAMENTAL STUDIES	216
V. ISOTOPE DIFFUSION IN SEMICONDUCTORS	216
VI. OTHER UNEXPLORED APPLICATIONS OF ISOTOPIC ENGINEERING	221
Chapter 10 Conclusions	225
References	229
INDEX	243
CONTENTS OF VOLUMES IN THIS SERIES	249

CONTENTS OF VOLUMES IN THIS SERIES	301

Contents

Preface to the first edition	x1
Preface to the second edition	xiii
1 Introduction	1
1.1 Development of SiGe technology	1
1.1.1 Early developments	1
1.1.2 Recent developments	1
1.2 Commercial production of SiGe devices	3
1.3 Landmarks in the development of SiGe devices	5
2 Strain, stability, reliability and growth	9
2.1 Strain and dislocations	9
2.2 Strain and dislocation energies	12
2.2.1 Strain energy	12
2.2.2 Energy of periodic arrays of dislocations	13
2.2.3 Non-periodic arrays of dislocations	16
2.3 Critical thickness	17
2.3.1 Layers with free surfaces	17
2.3.2 Capped strained layers	20
2.3.3 Critical thicknesses of superlattices	21
2.4 Stability of strained layers	22
2.4.1 Large area layers	22
2.4.2 Small area layers	24
2.4.3 Effect of trench isolation on stability	25
2.4.4 Thermal stability of surfaces of $\text{Si}_{1-x}\text{Ge}_x$ layers	26
2.5 Stresses in quantum structures	29
2.5.1 Edge-induced stresses	29
2.5.2 Effect of dimensions	31
2.6 Poly-SiGe and poly-SiGeC films	33
2.7 Growth of strain relaxed layers	35
2.7.1 Compositionally graded layers	35
2.7.2 Strain relaxation by hydrogen implantation	36

2.7.3	Growth on compliant substrates	37
2.7.4	Two step strain relaxation	37
3	Mechanism of strain relaxation	41
3.1	Introduction	41
3.2	Propagation of dislocations	41
3.2.1	Theory	41
3.2.2	Measurements of dislocation velocity	45
3.3	Nucleation, multiplication and blocking	47
3.3.1	Nucleation	47
3.3.2	Multiplication	51
3.3.3	Blocking	51
3.4	Strain relaxation	54
3.4.1	Dodson-Tsao theory and measurements	54
3.4.2	Recent studies of strain relaxation	57
3.5	Summary	58
4	Strain, growth, and TED in SiGeC layers	61
4.1	Introduction	61
4.2	Strain and Growth of $\text{Si}_{1-x-y}\text{Ge}_x\text{C}_y$ layers	62
4.2.1	Vegard's law	62
4.2.2	SiGeC layer growth on a thin SiGe buffer	62
4.2.3	Strain distribution in SiGeC/Si layers	63
4.2.4	$\text{Ge}_{1-y}\text{C}_y/\text{Ge}$ layers	64
4.2.5	Stability of carbon doped layers	65
4.2.6	Determination of substitutional carbon concentration by IR and Raman measurements	67
4.2.7	Effect of Ge on carbon incorporation	71
4.3	Thermal diffusion	73
4.3.1	Intrinsic thermal diffusion of Si, boron and phosphorus in Si	73
4.3.2	Diffusion of Ge in strained Si	75
4.3.3	Diffusion of boron in SiGe	76
4.3.4	Diffusion of Si and C interstitials	76
4.3.5	Surface and interface effects	78
4.4	TED and its suppression by carbon	79
4.4.1	TED	79
4.4.2	Suppression of TED by C	82
4.5	Modelling of TED in $\text{Si}_{1-x-y}\text{Ge}_x\text{C}_y$ layers	84
4.5.1	Trapping model	84
4.5.2	Outdiffusion of carbon	86
4.5.3	Improved model	88
4.6	Conclusion and summary	90

5	Bandstructure and related properties	91
5.1	Effect of strain on bandstructure	91
5.1.1	Splitting of bands	91
5.1.2	Bandgaps	92
5.1.3	Band offsets	93
5.1.4	Experimental studies of band offsets	96
5.2	Effective Density of States and Fermi energy	98
5.2.1	Cubic SiGe alloys	98
5.2.2	Lightly doped strained layers	98
5.2.3	Combined effect of strain and heavy doping on effective masses and Fermi energy	99
5.3	Bandgap narrowing due to heavy doping	101
5.4	Mobility	105
5.4.1	Hole and electron mobilities in unstrained $\text{Si}_{1-x}\text{Ge}_x$ alloys	105
5.4.2	Electron mobilities in the strained $\text{Si}_{1-x}\text{Ge}_x$ layers	107
5.4.3	Hole mobility in strained alloys	111
5.4.4	Interface scattering	113
5.5	Electrical properties of SiGeC films	116
5.5.1	Polycrystalline films	116
5.5.2	Single crystal films	117
5.6	Optical properties of unstrained alloys	118
5.6.1	Optical absorption	118
5.6.2	Luminescence studies of cubic $\text{Ge}_x\text{Si}_{1-x}$ alloys	120
5.6.3	Other optical bands in $\text{Si}_{1-x}\text{Ge}_x$ alloys: Electron hole plasma and dislocations	123
5.6.4	Electroreflectance and Raman spectra of cubic alloys	124
5.6.5	Raman scattering in the cubic alloys	124
5.7	Optical studies of strained layers	124
5.7.1	Near band edge luminescence	124
5.7.2	Bandgap	128
5.7.3	Broad luminescence band	129
5.7.4	Electroluminescence from strained layers	131
5.7.5	Quantum wells	132
5.8	Optical studies of quantum wires and dots	134
5.8.1	Quantum wires	134
5.8.2	PL and PR measurements of GeSi QWRs	137
5.8.3	Quantum dots	138
5.9	Superlattices (SLs)	140
5.9.1	Band structure of SLs	140
5.9.2	Mobility in Si_mGe_n SLs	142
5.9.3	Raman and Luminescence spectra of Si_mGe_n SLs	143

6	Heterostructure Bipolar Transistors	147
6.1	Introduction	147
6.2	Design	149
6.2.1	Ge profiles and layer structure	149
6.2.2	Comparison of different designs	153
6.3	Technology	154
6.3.1	Selective SiGe growth and epitaxial base	154
6.3.2	IBM technology	156
6.3.3	DBAG/TEMIC technology	157
6.3.4	Hitachi technology	159
6.4	DC performance of SiGe HBTs	161
6.4.1	Current gain β and Early voltage V_A	161
6.4.2	Gummel plots	163
6.5	AC characteristics of the HBTs	165
6.5.1	Cut-off frequency	165
6.5.2	Maximum oscillation frequency f_{max}	165
6.5.3	Gate delay in digital circuits	166
6.5.4	Parasitic barriers at high current densities	169
6.6	Optimization of BV_{CEO} , f_T and f_{max}	169
6.6.1	Transistors with high BV_{CEO} and high f_T	169
6.6.2	Simultaneous optimization of f_T and f_{max}	171
6.6.3	Thermal resistance	173
6.6.4	Yield and reliability	173
6.6.5	Low-temperature HBTs	177
6.7	HBTs with SiGeC base-layers	178
6.7.1	Parasitic barriers and their suppression by C	178
6.7.2	SiGeC transistors	181
6.8	Noise	183
6.8.1	Base design for low noise	183
6.8.2	Low frequency noise	187
6.9	Circuit applications	188
6.10	Summary	192
7	FETs and other devices	195
7.1	Ge channel MOS transistors	195
7.2	Strained layer p -channel MOSFETs	196
7.3	Strained layer n -channel MOSFETs	202
7.3.1	Si quantum well channel with tensile strain	202
7.3.2	Vertical SiGe n -MOS transistors	203
7.4	Modulation doped Field Effect Transistors	206
7.4.1	Enhanced mobility in 2D gas	206
7.4.2	Design of MODFETs	207
7.4.3	AC and DC performance of MODFETs	208
7.4.4	Noise in n -MODFETs	209
7.4.5	Circuit performance of MODFETs	211
7.5	Strained-layer MOSFETs on insulator	212

7.5.1	Strained-layer p -MOSFETs on insulator (strained SOI)	213
7.5.2	Thin-body MOSFETs	215
7.6	High- k gate-insulators	215
7.7	MOSFETs containing $\text{Si}_{1-x-y}\text{Ge}_x\text{C}_y$ alloys	218
7.7.1	$\text{Si}_{1-y}\text{C}_y$ channel n -MOSFETs	218
7.7.2	SiGeC p -channel MOSFETs	218
7.8	Ultra-shallow junctions	219
7.8.1	Series resistance	219
7.8.2	High ramp rates and spike anneals	222
7.9	Application of SiGe to ultrashallow junctions	226
7.9.1	Raised source and drain junctions	226
7.9.2	Poly-SiGeC gate	228
7.10	Resonant tunnelling diodes	231
7.10.1	NDC and PVR	231
7.10.2	Resonant tunnelling of holes in GeSi devices	232
7.10.3	Electron tunnelling in GeSi RTDs	234
7.10.4	Recent work	235
7.11	Photodetectors, waveguide switch and laser	236
7.11.1	IR photodetectors	236
7.11.2	Optical waveguide switch	239
7.11.3	SiGe QW resonant-state terahertz laser	240
7.11.4	Miscellaneous devices	241

2.1.	<i>Models of Generation of Current Channels at Presence of Drift Barriers in CVS</i>	67
2.2.	<i>Dimensional Effects in CVS-based Switches</i>	71
3.	THE KINETIC MODEL OF THE CURRENT INSTABILITY AT THE PRESENCE OF THE CURRENT CHANNEL	77
4.	EXPERIMENTAL CONFIRMATION OF THE KINETIC MODEL OF THE SWITCHING EFFECT	85
4.1.	<i>Influence of CVS Composition on Functional Characteristics of Switches</i>	85
4.2.	<i>Dependence of Electro-physical Parameters of Switches from Temperature and Pressure</i>	97
4.3.	<i>Influence of Synthesis and Thermal Treatment Conditions on Physical-Chemical Properties of Glasses and Electrical Parameters of Mono-stable Switches</i>	105
	REFERENCES	109
Chapter 4	Optical and Photoelectrical Properties of Chalcogenide Glasses	115
<i>A. M. Andriesh, M. S. Iovu and S. D. Shutov</i>		
1.	OPTICAL PROPERTIES OF CHALCOGENIDE GLASSES	115
1.1.	<i>The Reflectivity Spectra of Chalcogenide Crystals and Glasses: Electron States</i>	116
1.2.	<i>The Absorption Edge in Amorphous Chalcogenides</i>	121
1.3.	<i>Photo-induced Absorption</i>	138
2.	PHOTOELECTRICAL PROPERTIES OF AMORPHOUS CHALCOGENIDES	149
2.1.	<i>Steady-state Photoconductivity</i>	149
2.2.	<i>Transient Photoconductivity</i>	168
3.	CHALCOGENIDE GLASSES IN PHOTOELECTRIC INFORMATION RECORDING SYSTEMS	179
3.1.	<i>Chalcogenide Glasses for Integrated and Fiber Optics Application</i>	179
	REFERENCES	193
Chapter 5	Optical Spectra of Arsenic Chalcogenides in a Wide Energy Range of Fundamental Absorption	201
<i>V. Val. Sobolev and V. V. Sobolev</i>		
1.	INTRODUCTION	201
2.	THE GENERAL CONSIDERATION OF OPTICAL SPECTRA AND ELECTRONIC STRUCTURE THEORY	202
3.	MEASUREMENT TECHNIQUES AND DETERMINATION OF SPECTRA OF OPTICAL FUNCTIONS AND DENSITY OF STATES DISTRIBUTION $N(E)$	204
4.	OPTICAL SPECTRA OF α -As ₂ S ₃	205
4.1.	<i>Calculations of Sets of Optical Functions</i>	205
4.2.	<i>Decomposition of Dielectric Function Spectra and Characteristic Electron Loss Spectra into Elementary Components</i>	208
5.	OPTICAL SPECTRA OF β -As ₂ Se ₃	212
5.1.	<i>Calculations of Sets of Optical Functions</i>	212
5.2.	<i>Decomposition of Dielectric Function Spectra and Characteristic Electron Loss Spectra into Elementary Components</i>	217
6.	OPTICAL SPECTRA OF β -As _x Se _{1-x} ($x = 0.5, 0.36$)	219
6.1.	<i>Calculations of Sets of Optical Functions</i>	219

6.2. <i>Decomposition of Dielectric Function Spectra and Characteristic Electron Loss Spectra into Elementary Components</i>	222
7. OPTICAL SPECTRA OF $g\text{-As}_2\text{Te}_3$	224
7.1. <i>Calculations of Sets of Optical Functions</i>	224
7.2. <i>Decomposition of Dielectric Function Spectra and Characteristic Electron Loss Spectra into Elementary Components</i>	226
8. CONCLUSION	227
REFERENCES	227

Chapter 6 Magnetic Properties of Chalcogenide Glasses 229

Yu. S. Tver'yanovich

1. MAGNETISM OF CHALCOGENIDE GLASSES NOT CONTAINING TRANSITIONAL METALS	229
1.1. <i>Problems of Physicochemical Analysis of Glassy Systems</i>	229
1.2. <i>Dorfman's Method</i>	230
1.3. <i>Application of Magneto-chemistry for PCA</i>	231

PREFACE	xi
Chapter 1 Electronic Devices and Systems Based on Current Instability in Chalcogenide Semiconductors	1
<i>Andrey S. Glebov</i>	
1 SWITCHES AND MEMORY ELEMENTS	1
2 NONLINEAR SWITCHING ELEMENTS	3
2.1 CVS-based Thin Film Thermo-sensors	3
2.2. Threshold Switch with Controlling Parameters	8
2.3. The Acoustic-frequency Phase Inverter	11
2.4. Voltage Stabilizers Based on SIs	13
2.5. Elements of Calibration Microelectronics	14
3. ELECTRONIC DEVICES BASED ON SES	18
3.1. Generators of Relaxation Oscillations	18
3.2. Control Circuits of Electro-Luminescence Indicators (ELI)	24
3.3. Converter of the Decimal Code into the Computer Code	28
3.4. Electroluminescence Matrix Displays	29
4. MEMORY CELLS AND SWITCHES BASED ON HETERO-CONTACTS 'CRYSTAL GLASS'	31
5. RE-PROGRAMMED MEMORY DEVICES (RAM)	45
REFERENCES	54
Chapter 2 Heterostructures on Chalcogenide Glass and Their Applications	57
<i>Dumitru Tsiulyanu</i>	
1 METAL GLASS JUNCTIONS	57
1.1. Formation of the Contact Barrier	57
1.2. Mechanism of Current Transport	63
1.3. Junction Capacitance	67
1.4. Effect of the Thick Insulator Layer at the Interface	70
2. CRYSTAL GLASS JUNCTIONS	75
2.1. Isotype Heterojunctions	76

2.2. <i>Glass/n-Crystal Heterojunctions</i>	86
3. GLASS-GLASS JUNCTIONS	90
4. APPLICATIONS OF HETEROSTRUCTURES ON CHALCOGENIDE GLASS	91
4.1. <i>Photodetectors</i>	91
4.2. <i>Vidicon Camera Tubes and Electrophotographic Plates</i>	92
4.3. <i>Optical Information Recording Media and Lithography</i>	96
REFERENCES	98
Chapter 3 Ion Conductivity and Sensors	103
<i>E. Bychkov, Yu. Tveryanovich and Yu. Vlasov</i>	
1. ION TRANSPORT IN SILVER AND COPPER CHALCOGENIDE AND CHALCOHALIDE GLASSES	103
1.1. <i>Introduction</i>	103
1.2. <i>Percolation Threshold and Critical Percolation Regime at Low Mobile Ion Content</i>	104
1.3. <i>Universal Trend of the Haven Ratio and Modifier-controlled Regime</i>	113
1.4. <i>Conclusions</i>	129
2. CHALCOHALIDE GLASSES BASED ON COMPOUNDS OF THE THIRD GROUP METALS	131
2.1. <i>Introduction</i>	131
2.2. <i>Glass-formation Regions</i>	131
2.3. <i>Properties of Glasses</i>	132
2.4. <i>Diagrams of State</i>	135
2.5. <i>Systems with Exchange Reactions</i>	136
2.6. <i>Structural Investigations</i>	137
2.7. <i>Glass-forming Ability</i>	148
2.8. <i>Ion Conductivity and Ion Selectivity</i>	150
3. RECENT ADVANCES IN THE FIELD OF CHALCOGENIDE GLASS CHEMICAL SENSORS	154
3.1. <i>Selective and Low-selective Sensors: History</i>	154
3.2. <i>Sensor Fabrication</i>	157
3.3. <i>Mechanism of Chalcogenide Glass Sensors Operation</i>	161
3.4. <i>Sensor Applications</i>	163
3.5. <i>Conclusion</i>	165
REFERENCES	165
Chapter 4 Rare-earth Doped Chalcogenide Glass	169
<i>Yu. S. Tver'yanovich and A. Tverjanovich</i>	
1. CHALCOGENIDE GLASS PROPERTIES AND LUMINESCENCE MATERIALS	169
2. THE GLASSY SEMICONDUCTORS USED AS A MATRIX FOR INTRODUCTION OF LANTHANIDS	171
2.1. <i>The Basic Requirements for a Glass Matrix</i>	171
2.2. <i>The General Laws of Choice of Glass-forming System</i>	172
2.3. <i>Some of the Most Investigated Glass-forming Systems</i>	173
3. STRUCTURE AND COMPOSITION OF THE ENVIRONMENT OF LANTHANIDS IN CHALCOGENIDE GLASSES	178
4. STOKES LUMINESCENCE	183
4.1. <i>Optical Excitation Through the Absorption Band of the Lanthanoid</i>	183
4.2. <i>Optical Excitation Due to Inter-band Absorption of the Glassy Matrix</i>	190
5. ANTI-STOKES LUMINESCENCE	192
6. OTHER OPTICAL PROPERTIES OF THE GLASSY SEMICONDUCTORS ACTIVATED BY LANTHANIDS	204
REFERENCES	205

Chapter 5 Optical Fibers from High-purity Arsenic Chalcogenide Glasses	209
<i>M. F. Churbanov and V. G. Plotnichenko</i>	
1 INTRODUCTION	209
2 PREPARATION OF HIGH-PURITY CHALCOGENIDE GLASSES	210
2.1 <i>Preparation of Vitreous Arsenic Chalcogenides</i>	210
2.2 <i>Transparency of Chalcogenide Glasses as an Impurity-sensitive Property</i>	210
2.3 <i>Preparation of High-purity Glasses Based on Arsenic Chalcogenides</i>	216
3. CHALCOGENIDE GLASS FIBERS WITH LOW OPTICAL LOSSES	219
3.1 <i>Fabrication of Optical Fiber</i>	219
3.2 <i>Properties of Chalcogenide Glass Fibers</i>	222
3.3 <i>Some Applications of Chalcogenide Glass Fibers</i>	226

PREFACE	ix
Chapter 1 Introduction	1
1.1. ADVANTAGES OF CONDUCTING POLYMERS	1
1.2. EARLY ATTEMPTS FOR APPLICATIONS	2
1.3. GROWTH AND PROPERTIES	2
1.4. ACTIVE DEVICES	4
Chapter 2 Polyacetylene	7
2.1. STRUCTURE, GROWTH, AND PROPERTIES	7
2.1.1. <i>Structure</i>	7
2.1.2. <i>Growth and Doping of Polyacetylene</i>	7
2.2. BAND STRUCTURE OF <i>t</i> -PA	9
2.3. THE SOLITONS AND THE POLARONS	12
2.3.1. <i>The Solitons</i>	12
2.3.2. <i>The Polarons</i>	13
2.4. TRANSPORT PROPERTIES	16
2.4.1. <i>Mobility in Selected Polymers</i>	16
2.4.2. <i>Conductivity and Susceptibility</i>	20
Chapter 3 Optical and Transport Properties	23
3.1. EFFECT OF ELECTRIC FIELD ON PHOTOLUMINESCENCE (PL)	23
3.2. THE DIELECTRIC CONSTANT	27
3.3. SPACE CHARGE LIMITED CURRENTS	28
3.3.1. <i>Early Work of Mott, Poisson and Continuity Equations in a Trap-Free Insulator</i>	28
3.3.2. <i>Effect of Background Doping</i>	31
3.4. POLYMERS: THE SOLIDS WITH TRAPS	32
3.4.1. <i>Poisson Equation with Trapped Charges</i>	32
3.4.2. <i>Single Level Traps</i>	32
3.4.3. <i>Gaussianly Distributed Traps</i>	34
3.5. EXPONENTIAL TRAPS	35
3.5.1. <i>Calculation of $J(V)$</i>	35
3.6. RELAXATION OF THE APPROXIMATION $p_1 \gg p$	35
3.6.1. <i>$J-V$ Curves When $p_1 \gg p$</i>	35

3.6.2. <i>Trap-Filled Limit</i>	36
3.7. EFFECT OF FINITE (NON-ZERO) SCHOTTKY BARRIER	38
3.7.1. <i>Importance of Finite Barriers</i>	38
3.7.2. <i>Theory</i>	39
3.7.3. <i>Results and Discussion</i>	40
3.7.4. <i>Comparison with Experiment</i>	42
3.8. COMBINED EFFECT	44
3.9. TEMPERATURE EFFECTS	44
3.9.1. <i>Temperature Effects in PPV-Based Polymers</i>	44
3.9.2. <i>Recent Work</i>	48
3.9.3. <i>Temperature Effects in MEH-PPV. Recent Work</i>	50
3.9.4. <i>Temperature Effects in Alq₃</i>	51
3.10. MOBILITY MODEL OF CHARGE TRANSPORT	55
3.11. UNIFIED MODEL	55
3.11.1. <i>Shallow Gaussian and Single Level Traps</i>	55
3.11.2. <i>Unified Model with Exponentially Distributed Traps</i>	57
3.12. HIGH FIELD OR POOLE-FRENKEL EFFECT	58
3.12.1. <i>J-V Characteristics</i>	58
3.12.2. <i>Calculations and Comparison with Experiments</i>	60
3.13. MOBILITY OF CHARGE CARRIERS	62
3.13.1. <i>Bulk Materials</i>	62
3.13.2. <i>Mobility in Blends</i>	63
3.14. IMPORTANT FORMULAS	64
3.15. SUMMARY OF THIS CHAPTER	64
Chapter 4 Light Emitting Diodes and Lasers	67
4.1. EARLY WORK	67
4.2. BLUE, GREEN AND WHITE EMISSION	70
4.2.1. <i>Blue and Green LEDs</i>	70
4.2.2. <i>White Light Emission from Organic LEDs</i>	74
4.3. COMPARISON WITH OTHER LEDs	80
4.4. ORGANIC SOLID STATE LASERS	81
4.4.1. <i>Photopumped Lasers</i>	81
4.4.2. <i>Spectral Narrowing</i>	82
4.4.3. <i>Blue Lasers</i>	83
4.5. QUANTUM EFFICIENCY AND DEGRADATION	83
4.6. STABILITY	86
4.6.1. <i>Degradation of the Polymer</i>	86
4.6.2. <i>The Cathode and the Black Spots</i>	87
4.6.3. <i>Degradation of the Anode</i>	90
4.7. SOLUBLE Ni ²⁺ 5-COORDINATED AL-COMPLEXES	91
4.8. SUMMARY AND CONCLUSIONS	94
Chapter 5 Solar Cells	95
5.1. INTRODUCTION	95
5.2. SOLAR CELLS	95
5.2.1. <i>Single and Bilayer Solar Cells</i>	95

5.2.2. <i>Interpenetrating Network of Donor–Acceptor Organics. Bulk Heterojunction Solar Cells</i>	97
5.3. SOURCE OF V_{oc} IN BHSCS	104
5.3.1. <i>Effect of Acceptor Strength [133]</i>	104
5.3.2. <i>More Recent Work [134,135]</i>	105
5.4. OPTIMUM PCBM CONCENTRATION	107
5.4.1. <i>Superposition Principle</i>	108
5.5. MODELING THE OUTPUT CHARACTERISTICS	112
5.5.1. <i>The Output Currents</i>	112
5.5.2. <i>The Model</i>	115
5.6. COMPARISON WITH OTHER SOLAR CELLS	117
5.6.1. <i>Amorphous Si Solar Cells</i>	117
5.6.2. <i>Polycrystalline Si Solar Cells</i>	119
5.7. SUMMARY AND CONCLUSIONS	122
Chapter 6 Transistors	123
6.1. IMPORTANCE OF ORGANIC TFTS	123
6.2. EARLY WORK	124
6.3. EFFECT OF TRAPS	126
6.4. HIGH FIELD EFFECTS	127
6.5. TRANSPORT IN POLYCRYSTALLINE ORGANICS	130
6.5.1. <i>Effect of Grain Boundaries</i>	130
6.6. PENTACENE TFTS	131
6.7. CONTACTS	138
6.8. ORGANIC PHOTOTRANSISTOR	140
6.9. ORGANIC DIELECTRICS	143
BIBLIOGRAPHY	147
INDEX	157
CONTENTS OF VOLUMES IN THIS SERIES	167

CONTENTS

<i>Preface</i>	ix
1. Single Spin Coherence in Semiconductors	1
Maiken H. Mikkelsen, Roberto C. Myers, Gregory D. Fuchs, and David D. Awschalom	
1. Introduction	2
2. Single Electron Spins in Quantum Dots	3
3. Few Magnetic Spins in Quantum Wells	18
4. Single Spins in Diamond	27
References	41
2. Theory of Spin–Orbit Effects in Semiconductors	45
Jairo Sinova and A. H. MacDonald	
1. Introduction	46
2. The Relativistic Origins of Spin–Orbit Coupling	48
3. Band Structure of Semiconductors: Effective $k \cdot p$ Hamiltonians	51
4. SHE and AHE	61
5. Topological Berry’s Phases in Spin–Orbit Coupled Systems: ACE	79
References	85
3. Fermi Level Effects on Mn Incorporation in III-Mn-V Ferromagnetic Semiconductors	89
K. M. Yu, T. Wojtowicz, W. Walukiewicz, X. Liu, and J. K. Furdyna	
1. Introduction	90
2. Sample Preparation and Characterization	93
3. Effects of Mn Location on the Electronic and Magnetic Properties	98
4. Concluding Remarks	125
Acknowledgments	130
References	130

4. Transport Properties of Ferromagnetic Semiconductors	135
T. Jungwirth, B. L. Gallagher, and J. Wunderlich	
1. Introduction	135
2. Basic Transport Characteristics	138
3. Extraordinary Magnetotransport	167
4. Summary	199
Acknowledgments	200
References	200
5. Spintronic Properties of Ferromagnetic Semiconductors	207
F. Matsukura, D. Chiba, and H. Ohno	
1. Introduction	207
2. Spin-Injection and Detection of Spin-Polarization	209
3. Magnetic Tunnel Junction	212
4. Magnetic DW	218
5. Electric-Field Control of Ferromagnetism	228
6. Optical Control of Ferromagnetism	231
7. Summary	234
Acknowledgments	235
References	235
6. Spintronic Nanodevices	241
C. Gould, G. Schmidt, and L. W. Molenkamp	
1. Introduction	241
2. Tunneling Anisotropic Magnetoresistance	244
3. Multi-TAMR Structures	248
4. Volatile and Nonvolatile Operation	250
5. Correlated Effects	252
6. Portability	259
7. Nanodevices	260
8. Lateral Nanoconstrictions	260
9. Current-Assisted Manipulation	264
10. Local Lithographic Anisotropy Control	268
11. Magnetic Characterization of Nanobars	269
12. Transport Characterization of Nanobars	271
13. Anisotropic Strain Relaxation	274
14. Memory Device Using Local Anisotropy Control	277
15. Device Operation	278
16. Magnetic States	279

17. Origin of the Resistance Signal	280
18. Conclusion and Outlook	283
Acknowledgments	284
References	284
7. Quantum Structures of II–VI Diluted Magnetic Semiconductors	287
J. Cibert, L. Besombes, D. Ferrand, and H. Mariette	
1. Magnetic and Electric Impurities in II–VI Nanostructures	287
2. Carrier-Induced Ferromagnetism in 2D DMSs	291
3. 0D Systems	298
4. Transport in Quantum II–VI DMS Structures	316
5. Summary	320
References	320
8. Magnetic Impurities in Wide Band-gap III–V Semiconductors	325
Agnieszka Wolos and Maria Kaminska	
1. Introduction	326
2. Diluted Magnetic Semiconductors	330
3. Nature of Mn Impurity in III–V Semiconductors	334
4. Magnetic Interactions in III–V DMSs with Mn	352
5. GaN-Based DMSs	357
6. Internal Reference Rule for Transition Metal Ions—Case of GaN	361
7. Summary and Conclusions	362
Acknowledgments	364
References	364
9. Exchange Interactions and Nanoscale Phase Separations in Magnetically Doped Semiconductors	371
Tomasz Dietl	
1. Introduction	372
2. Substitutional Transition Metal Impurities in Semiconductors	375
3. Origin of Exchange Interactions between Carriers and Localized Spins	381
4. Effects of $sp-d(f)$ Exchange Interactions	382
5. Exchange Interactions between Effective Mass Carriers	392
6. Models of Ferromagnetic Spin–Spin Interactions in Semiconductors	397
7. $p-d$ Zener Model of Carrier-Mediated Ferromagnetism	399
8. Effects of Disorder and Localization on Carrier-Mediated Ferromagnetism	407
9. Effects of Nonrandom Distribution of Magnetic ions	416

10. Is Ferromagnetism Possible in Semiconductors with no Magnetic Elements?	422
11. Summary	423
Acknowledgments	425
References	425

10. Computational Nano-Materials Design for the Wide Band-Gap and High- T_C Semiconductor Spintronics **433**

Hiroshi Katayama-Yoshida, Kazunori Sato, Tetsuya Fukushima, Masayuki Toyoda, Hidetoshi Kizaki, and An van Dinh

1. Introduction	433
2. Magnetic Mechanism, T_C , and Unified Physical Picture	436
3. Spinodal Nano-Decomposition and Nano-Spintronics Applications	444
4. New Class of Oxide Spintronics without a 3d TM	450
5. Conclusion	452
Acknowledgments	452
References	452

11. Properties and Functionalities of MnAs/III-V Hybrid and Composite Structures **455**

Masaaki Tanaka, Masafumi Yokoyama, Pham Nam Hai, and Shinobu Ohya

1. Introduction	455
2. Fabrication and Structure of GaAs:MnAs Nano-Particles	456
3. Large Magnetoresistance at Room Temperature	458
4. Spin Dependent Tunneling Transport Properties in III-V Based Heterostructures Containing GaAs:MnAs	463
5. Properties of Zinc-Blende Type and NiAs-Type MnAs Nano-particles	471
6. Magneto-Optical Device Applications	478
Acknowledgments	483
References	484
