

TABLE OF CONTENTS

CHAPTER 1. General Features of Nuclei	3
1.1. Nuclear Composition.	3
1.2. Nuclear Masses: Binding Energies	4
1.3. Types of Nuclear Instability: Spontaneous and Induced Transformations	6
a. Natural α -radioactivity; Fission	7
b. γ -radiation; Particle Emission	8
c. β -decay	9
CHAPTER 2. Systematics of Stable Nuclei; Details of Binding Energy Surfaces	12
CHAPTER 3. Properties of Nuclear States; Ground States	17
3.1. Spins and Moments	17
3.2. The Size of Nuclei	20
CHAPTER 4. Survey of Nuclear Reactions	24
4.1. Types of Reaction, Cross-Sections, Excitation Functions	24
4.2. Resonance Processes	26
4.3. Direct Processes	28
4.4. Table of the Most Important Reactions	29
CHAPTER 5. Two-body Systems: Interactions between Nucleons	32
5.1. Internucleon Forces	32
5.2. Saturation Properties and Internucleon Forces	35
5.3. Charge Independence of Nuclear Forces; The Isotopic or Isobaric Spin Quantum Number	36
CHAPTER 6. Nuclear Models A: The Uniform Model	40
6.1. General Remarks	40
6.2. Powder and Shell Models	41
6.3. Supermultiplet Theory	42
CHAPTER 7. Nuclear Models B: Independent Particle Models	47
7.1. General Features of the Independent Particle or Shell Models	47
7.2. The L - S coupling Shell Model	49
7.3. Comparison of the L - S and j - j Shell Models.	50
7.4. The j - j Coupling Shell Model	52
7.5. Coupling Rules for the j - j Model	55
7.6. Normal States and Low-Excited States	57
7.7. Magnetic and Quadrupole Moments	59
7.8. Problems of the j - j Model	60

CHAPTER 8. Nuclear Models, C: Many Particle Models	65
8.1. The α -particle Model	65
8.2. Collective Model	65
8.3. Comparison of the j - j and the Collective Models. . . .	68
CHAPTER 9. Nuclear Reactions A: Close Collisions	71
9.1. The Collision Matrix	71
9.2. Qualitative Discussion of Resonance Phenomena	75
9.3. Derivation of the Resonance Formula	77
9.4. Dependence of the Parameters on the Size of the Internal Region	80
9.5. Radioactivity	81
9.6. The Clouded Crystal Ball Model	82
9.7. The Intermediate Coupling or Giant Resonance Model	84
CHAPTER 10. Nuclear Reactions B: Surface Reactions	89
10.1. Angular Distribution in Stripping Reactions	90
10.2. Electric Excitation.	94
CHAPTER 11. Interaction with Electron-Neutrino Fields	97
11.1. Theory of β -decay	97
11.2. Allowed and Forbidden Transitions	100
11.3. Shape of the Spectrum	101
11.4. Total Transition Probability	102
CHAPTER 12. Electromagnetic Transitions in Complex Nuclei .	105
12.1. Introduction	105
12.2. Radiative Transitions	106
12.3. Single Particle Matrix Elements	109
References	112
Index	122
