

CONTENTS

Preface	xiii
Introduction	xv

Section I: Motivation for Further Exploration***PART 1: PROGRESS IN THEORY*****Unit A: Models Using Boson Techniques**

1. Supersymmetry in Nuclei: Recent Developments	2
2. Boson-Fermion Symmetries and Dynamical Supersymmetries for Odd-Odd Nuclei	14
3. Experimental Tests of Boson-Fermion Symmetries and Supersymmetries Using Coulomb Excitation with Heavy Ions	20
4. Manifestations of Fermion Dynamical Symmetries in Collective Nuclear Structures	27
5. On the Microscopic Theory of the Interacting Boson Model	35
6. Realistic and Model Applications of the Boson Expansion Theory	41
7. Mixed-Symmetry Interpretation of Some Low-Lying Bands in Deformed Nuclei and the Distribution of Collective Magnetic Multipole Strength	47
8. Interacting Boson Model-2 for High-Spin States	53
9. $L = 2$ Fermion Pairs in Nuclear Dynamic Symmetry Models	59
10. The Importance of an Accurate Determination of Interacting Boson Model-2 Parameters	65

Unit B: Shell Model

11. Shell-Model Calculations near ^{132}Sn Using a Realistic, Effective Interaction	70
12. Shell-Model Calculations of $^{90,88}\text{Zr}$ and $^{90,88}\text{Y}$	78
13. Dynamic Deformation Model	85
14. Nuclear Decay Data: An Important Interface Between Basic and Applied Science	94
15. The Importance of Level Structure in Nuclear Reaction Cross-Section Calculations	100
16. Distribution of Electromagnetic Transition Amplitudes	115
17. $N_p \cdot N_n$ Systematics and Their Implications	120
18. Nuclear Masses Far from Stability: Interplay of Theory and Experiment	126

PART 2 : ASTROPHYSICS

19. Nuclear Astrophysics Away from Stability	134
20. Shell-Model Calculations of β -Decay Rates for s- and r-Process Nucleosyntheses	145
21. β -Delayed Fission Calculations for the Astrophysical r-Process	149

Unit B: Nuclear Data and Theory

Related to Astrophysics

22. Shell-Model Plus Pairing Calculations of β -Delayed Neutron Emission Properties at $A \cong 90$ -100	153
23. Random Phase Approximation Calculations of Gamow-Teller β -Strength Functions in the $A = 80$ -100 Region with Woods-Saxon Wave Functions	159
24. Identifying Nilsson States in $A \cong 100$ Nuclei by Investigating Gross β -Decay Properties	165
25. New Delayed-Neutron Precursors from TRISTAN	171
26. Level Densities near the Neutron Separation Energy in Sr-93 \rightarrow 97	177

Section II: Experimental Exploration of Current Issues

PART 1: INTRUDER STATES IN NUCLEI

27. Toward a Shell-Model Description of Intruder States and the Onset of Deformation	284
28. In-Beam Spectroscopy Using the (t,p) Reaction: Recent Results near $A = 100$	190
29. Possible Evidence for α -Clustering in the Double Subshell Closure Nucleus ^{96}Zr	196
30. Structure Transition in Heavy Y Isotopes	202
31. Rotational Structure of Y Nuclei in the Deformed $A = 100$ Region	208
32. Coexistence in the Cd Isotopes and First Observation of a U(5) Nucleus	214
33. E0 Transitions and Intruder States: Recent Results	321
34. Recent Experimental Investigations and Interacting Boson Model Calculations of Even Te Isotopes	227
35. Spectroscopy of Light Br and Rb Isotopes: Onset of Large Quadrupole Deformation	233
36. Intruder States in Highly Neutron-Deficient Pt Nuclei: Evidence from Lifetime Measurements?	239
37. Shape Coexistence in ^{185}Au	245
38. Shape Coexistence in Neutron-Deficient Pb Isotopes	252
39. Intruder States in the $Z = 82$ Region by the β^+ /EC and α Decay of Neutron-Deficient Bi, Po, and At Nuclei	258
40. Microscopic, Semiclassical, and Cluster Treatments of Low-Lying Reflection Asymmetric States in the Light Actinides	266
41. Fast Electric Dipole Transitions in Ra-Ac Nuclei	272
42. Dipole Collectivity in Nuclei and the Cluster Model	278
43. Decay of ^{145}Cs to Levels of ^{145}Ba	284

PART 2 : HIGH-SPIN-STATE INVESTIGATIONS

Using Heavy Ions

44. Spectroscopic Consequences of Shape Changes at High Angular Momenta	292
45. Evolution of Nuclear Shapes at High Spins	298
46. Signature Splittings in ^{135}Pr	305

47. Massive Transfer Reactions and the Structure of Transitional $A = 100$ Nuclei	311
48. High-Spin Structure of ^{163}Lu	317
49. Shape Competition and Alignment Processes in Light Au and Pt Nuclei	323
50. Rotational Bands in Deformed Odd-Odd Nuclei	329
51. Heavy-Ion-Induced Transfer Reactions: A Spectroscopic Tool for High-Spin States	335
52. Berkeley High Energy Resolution Array: Early Results	341

PART 3 : NUCLEAR MOMENTS

53. On-Line Nuclear Orientation	350
54. Spins and Moments Determined by On-Line Atomic-Beam Techniques	358
55. UNISOR Collinear Laser Facility: First Results	364
56. Ground-State Studies at ISOLDE	370
57. Laser Spectroscopy of Short-Lived Isotopes	380
58. Magnetic Moments of Excited States in Nuclei Far from Stability	386
59. Spectroscopy and Measurement of Electromagnetic Moments in $^{198,200,210}\text{Po}$	392
60. Electromagnetic Properties of Neutron-Deficient Pb Isotopes	399

Section III: New Facilities and Techniques

PART 1: MAJOR FACILITIES

61. ISOLDE Today and Tomorrow	406
62. A New Heavy-Ion Facility at Chalk River	414
63. Recent Developments at TRISTAN: Nuclear Structure Studies of Neutron-Rich Nuclei	420
64. Potential Capabilities at Los Alamos Meson Physics Facility To Study Nuclei Far from Stability	426
65. Developing an Accelerated Radioactive Beams Facility Using an On-Line Isotope Separator as an Injector	432
66. Proton-Rich and Neutron-Rich Nuclei Produced by Heavy Ions	439

PART 2: TECHNIQUES

Unit A: In-Beam

67. Trends in the Study of Light Proton-Rich Nuclei	448
68. Measuring β Lifetimes with the Michigan State University Recoil Product Mass Separator	454
69. Time-of-Flight Isochronous Spectrometer for Direct Mass Measurements of Exotic Light Nuclei	459
70. Spectrometers for Light-Ion, $x\gamma$ Spectroscopy	464
71. Nuclear Shape Transitions and Dynamical Supersymmetries in the Pt Region: Studies by $(n,n'\gamma)$ Reaction Spectroscopy	470

Unit B: Radioactive Targets and Radiochemistry

72. Special Targets for Nuclear Reaction and Spectroscopic Studies 476
73. Rapid, Continuous Chemical Separations 482

PART 3: TECHNIQUE COMPARISON

(INVESTIGATIONS OF ^{138}Sm)

74. First Results at Systeme Accelérateur Rhone-Alpes (SARA) with a He-Jet Coupled to a High-Current Mass Separator Source 490
75. Silicon Box: New Tool for In-Beam γ -Ray Spectroscopy Through Heavy-Ion Fusion Reactions 496
76. Decay of ^{138}Eu and ^{136}Eu and Deformation in the Light Sm Region 502

Section IV: Survey of Current Research
