

CONTENTS

PART I

INTRODUCTION

	PAGE
GENERAL	1
CONVENTIONS	2
(1) Linear expression of formulae.	
(2) Use of Greek and Latin numerical prefixes.	
(3) Use of "bi" as a prefix.	
(4) Use of bis-, tris-, and tetrakis- as prefixes.	
(5) Elision of vowels, etc.	
(6) Use of italic type.	
(7) Use of Latin prefixes.	
(8) Use of oxy-, hydroxy-, and oxo- as prefixes.	
(9) Symbols.	
(10) Division of names.	

PART II

INORGANIC NOMENCLATURE

A. ELEMENTS	9
Allotropic forms. Isotopes.	
B. COMPOUNDS BETWEEN TWO ELEMENTS	9
(1) General.	
(2) Intermetallic compounds	
(3) Group names.	
(4) Hydrides.	
(5) Oxides.	
(6) The hydrated hydrogen ion.	
(7) Peroxides.	
(8) Nitrides, Phosphides, etc.	
C. COMPOUNDS INVOLVING THREE OR MORE ELEMENTS	13
(1) General.	
(2) Hydroxides.	
(3) Amino- and amido-compounds.	
(4) Imino-compounds.	
(5) Thio-compounds.	
(6) Oxy- and peroxy-acids.	
Use of the prefix "hydro" with acids.	
(7) Salts.	
(8) Co-ordination compounds.	
D. ISOPOLY-ACIDS AND THEIR SALTS	21
E. HETEROPOLY-ACIDS AND THEIR SALTS	23

	PAGE
F. ADDITION COMPOUNDS	24
Hydrates. Peroxyhydrates. Ammoniates. Alcoholates. Etherates. Other addition compounds.	
G. HALOGENO-DERIVATIVES OF OXY-ACIDS	25
H. AMIDO- AND IMIDO-DERIVATIVES OF OXY-ACIDS	26
I. OTHER NITROGEN COMPOUNDS	27
(1) Nitrilo-compounds.	
(2) Nitrosyl or nitroso-compounds.	
(3) Nitroxyl compounds.	
(4) Mercuriammonium compounds.	
(5) Chains of nitrogen atoms.	
J. HYDRIDES OF BORON, SILICON, AND ELEMENTS OF GROUP IVB	29
K. CARBONYL COMPOUNDS	32
L. ORGANOMETALLIC COMPOUNDS	32

PART III

ORGANIC NOMENCLATURE

A. GENERAL AND HISTORICAL	35
B. CONVENTIONS	39
(1) Use of italics.	
(2) Linear expression of formulæ.	
(3) Order of radicals.	
(4) Use of Greek letters.	
(5) Position of numerals used in enumeration of substituents.	
C. ACYCLIC HYDROCARBONS	43
(1) Saturated hydrocarbons.	
(2) Unsaturated hydrocarbons.	
(3) Names of acyclic hydrocarbon radicals.	
D. NON-FUNCTIONAL SUBSTITUENTS	47
E. FUNCTIONAL SUBSTITUENTS OF ONE TYPE	48
(1) Alcohols and phenols.	
(2) Thiŕ-alcohols (thiols).	
(3) Ethers.	
(4) Epoxy-compounds.	
(5) Sulphides (thio-ethers), sulphoxides, sulphones, etc.	
(6) Aldehydes, thioaldehydes, acetals, etc.	
(7) Ketones and thioketones.	
(8) Oximes.	
(9) Amines.	
(10) Imines.	

- (11) Hydroxylamine derivatives.
 (12) Hydrazines, hydrazides, hydrazones, and azines.
 (13) Diazoamino-compounds, azanes, and azenes.
 (14) Azo-compounds.
 (15) Azoxy-compounds.
 (16) Diazonium and diazo-compounds.
 (17) Acids.
 Carboxylic acids; names of acyl radicals; thiocarboxylic acids; sulphonic acids; other organic acids.
 (18) Carboxylic acid derivatives.
 Anhydrides; acid halides; esters; amides; amidines, etc.; hydroxamic acids; nitrolic acids; nitronic acids (*aci*-nitro-acids).
 (19) *iso*Cyanides.
 (20) Cyanates, *isocyanates*, etc.
 (21) Urea derivatives.
 (22) Other nitrogen compounds.
 Guanidine; semicarbazide; amidrazones; sulphilimines and phosphinimines; azides.
 (23) Other compounds of phosphorus and its congeners.
 I.U.C. Rule 52: list of prefixes and suffixes.

MULTIPLE FUNCTIONS 72

- (1) Hydroxy-acids.
 (2) Amino-acids.
 (3) Amic acids.
 (4) Aldehyde acids.
 (5) Hydroxy-aldehydes.
 (6) Keto-acids.
 (7) Sulpho-carboxylic acids.
 (8) Amino-alcohols.
 (9) Halogeno-alcohols.
 (10) Keto-alcohols.
 (11) Keto-aldehydes.
 (12) Amino-ketones.
 (13) Sulphanilamides.

MISCELLANEOUS COMPOUNDS 80
 Iodine compounds; thetins.

CARBOHYDRATES AND THEIR DERIVATIVES 81

CYCLIC SYSTEMS 87

- Names of cyclic radicals.
 Substituted benzyl and benzylidene compounds; homo-compounds; the problem of stem names.
 (a) Monocyclic systems.
 Homocyclic systems.
 Heterocyclic systems.
 (1) Three- and four-membered rings.
 (2) Seven-membered and larger rings.
 (3) Five- and six-membered rings.
 Tables of simpler heterocyclic ring systems.
 (b) "Benzo" bicyclic systems.
 (c) Polycyclic systems.
 (I) General.
 The oxa-aza convention.

(2) Fusion of rings.	
(i) Fusion of the benzene ring.	
(ii) Naphtho- and naphtha-rings.	
(iii) The terms linear and angular.	
(iv) Fusion of more complex rings: note on names used in fused systems; "extra" hydrogen atoms; extension of oxa-aza convention.	
(3) Bridged rings.	
(i) The Baeyer system.	
(ii) The <i>endo</i> -system.	
(4) <i>spiro</i> -Compounds.	
(d) Derivatives of cyclic systems.	
(1) Hydrogenation of rings.	
(2) The keto-group in rings.	
(3) Hydroxyl derivatives.	
(4) Acid and aldehyde derivatives.	
(5) Amino-derivatives.	
(6) Mixed chain and ring systems.	
(7) Arsenic and antimony ring systems.	
(8) Indication of stereochemical configuration of steroids.	
J. NOTES ON VARIOUS RING SYSTEMS	117
K. LIST OF SOME OF THE RADICALS COMMONLY USED IN ORGANIC CHEMISTRY	138
L. TRIVIAL AND SYSTEMATIC NAMES OF CERTAIN COMPOUNDS	143
(1) Purine derivatives.	
(2) Hydroxyanthraquinones.	
(3) Higher normal saturated monocarboxylic acids.	
(4) Saturated dicarboxylic acids.	
(5) Simpler $\alpha\beta$ -unsaturated carboxylic acids.	
(6) Higher unsaturated carboxylic acids.	
(7) Amino-acids.	
(8) Amino- and hydroxy-naphthalenesulphonic acids.	
(9) Carbohydrates.	
INDEX	148
