

TABLE OF CONTENTS

Preface

xvii

Chapter 0: Some Philosophical Discourse on the Use
of Computers in Chemistry

0.1 Initial Considerations	
0.2 Opinions of computing environments	3
0.3 How topics will be presented in this book	4
0.4 Type of calculations to be stressed	
0.5 A chemically-oriented view of computers and computation	5
0.6 A strictly computer-oriented problem	5
0.7 Some other thoughts	6
0.8 A comment on notation	

PART I: A general look at how computers can be used in
scientific applicationsChapter 1 A General Presentation of Various Mathematical
Approaches

1.1 Analytical approaches to mathematical problems	1
1.1.1 Why an analytical method is usually the best way to proceed	
1.1.2 One major exception to the above rules	
1.2 The writing of mathematical expressions	
1.2.1 Some very basic rules	12
1.2.2 Stating the "rules" another way	
1.3 Ways to write equations	
1.3.1 The grammar and syntax of mathematical expressions	
1.3.2 Efficiency of evaluation <u>vs.</u> ease of understanding	
1.3.3 A note on problems and exercises	19
1.4 Developing analytical methods	
1.4.1 Reference works you can consult for sources of equations (and other reference works specifically useful for computational purposes)	
1.4.1.1 "Mathematical formularies"	

1.4.1.2	Integral and derivative tables	23
1.4.1.3	Textbooks	24
1.4.1.4	Computer manuals	24
1.4.1.5	Computer language manuals	25
1.4.1.6	Manuals for specific programs	
1.4.2	Acquiring an algebraic "bag of tricks"	
1.4.2.1	The method of partial fractions	
1.4.2.2	Some hints about trigonometric functions	
1.4.3	Derivatives, differentials, and integrals	
1.4.3.1	Derivatives and differentials	
1.4.3.2	One important application of derivatives (and a word of warning)	
1.4.3.3	A very short review of the integral calculus	
1.4.4	A review of complex numbers	
1.5	Summary	

Chapter 2: A Look at the Numerical (or Computational) Approach

2.1	Algorithms	
2.1.1	Some points concerning algorithmic efficiency	
2.2	Computer programming: The art of using algorithms	
2.3	Some rules for good computer programming	
2.3.1	Stating algorithms in a form best suited to programming	
2.3.2	Structured programming	
2.3.3	Size <u>vs.</u> speed in programming	
2.3.4	User-friendliness	
2.3.4.1	The computer languages to be used in this book	
2.3.4.2	A further word about user friendliness in the context of structured programming	
2.3.5	The use of remarks (comments) in programming	
2.3.6	Summary	
2.4	An overview of computer applications	
2.4.1	A main application: Calculation	
2.4.2	Data handling and manipulation	
2.4.2.1	Sortine	

2.4.2.2 A small complication to sorting:	
Companion arrays	112
2.4.2.3 Searching	113
2.5 Some application programs	115
2.5.1 The most important application program: DOS	116
2.5.2 Word processors	117
2.5.2.1 Word processors and program writing	123
2.5.3 Database programs	123
2.5.4 Spreadsheets	125
2.5.5 Some final thoughts concerning specific applications of computers	126
2.6 Computers--Types and uses	127
2.6.1 Microcomputers	130
2.6.2 Minicomputers	131
2.6.3 Main frame computers	132
2.6.4 Using computers together: Networking	133
2.6.5 Some types of useful hardware used with computers	
2.6.5.1 Keyboards and monitors	134
2.6.5.2 Printers	136
2.6.5.3 Disk drives and cassette tape drives	137
2.6.5.4 Some other devices	139
2.6.5.5 System configurations: What do you need?	143
2.6.6 Programming languages: How we "talk" to computers	144
2.6.6.1 Machine language	144
2.6.6.2 Assembly language	144
2.6.6.3 High level languages not used in this book	147
2.6.6.4 The BASIC programming language	150
2.7 Some problems encountered when using computers	151
2.8 Summary	153

Chapter 3: Geometrical Approaches to Problem Solving and an Introduction to Computer Graphics

3.1 Some initial considerations	157
3.2 How to draw a graph	158
3.3 An aside on coordinates used in computer plotting	194
3.4 Plotting in three dimensions	100

3.5	Contour plotting	220
3.6	Summary	231
<u>Chapter 4</u>	[An Example of] A Complete Program Package for People who Prefer to Use an Interpreter	233
<u>PART II: A detailed look at some mathematical and numerical approaches</u>		
<u>Chapter 5</u>	Analytical and Numerical Methods for the Solution of Algebraic Equations	257
5.1	Initial considerations	257
5.2	Some elementary analytical methods	258
5.2.1	Some basics concerning roots of polynomials	258
5.2.2	Quadratic equations	260
5.2.3	Cubic equations	266
5.2.4	Quartic equations	272
<u>Chapter 6</u>	A More Complete Introduction to Numerical Methods for Solving Algebraic Equations	275
6.1	Initial considerations	275
6.2	The iterative (or simple iterative) method	276
6.3	$F(x) = 0$ methods without derivatives	284
6.3.1	The bisection method	292
6.3.2	The method of false position	297
6.3.3	The secant method	300
6.4	The Newton-Raphson method (or how to use derivatives)	303
6.5	A reminder of some programming practices	308
6.6	Some comments regarding roots of polynomials	308
<u>Chapter 7</u>	An Extensive Example of the Use of Numerical Root-Seeking Methods: The Calculation of pH in General Acid-Base Equilibria	315

10.3 Determinants and simultaneous equations: Cramer's rule	393
10.4 Matrices	395
10.5 Matrix inversion	415
10.6 Orthogonal matrices	425
10.7 Matrix diagonalization	427
10.7.1 The Jacobi method of matrix diagonalization	429
10.7.2 The Givens-Householder method	433
10.8 Some useful tricks applying matrix diagonalization	443
<u>Chapter 11: Differential Equations</u>	
1.1 Some initial considerations	447
1.2 Numerical solution of differential equations	450
<u>Chapter 12: Mode Fitting and Data Analysis</u>	461
12.1 Some initial considerations	461
12.2 Model fitting	461
12.3 Regression analysis	463
12.4 Linear regression	465
12.4.1 Linear regression with a single parameter	465
12.4.2 The two-parameter case: Best fit to a straight line	468
12.4.3 General linear regression	474
12.5 The artificial generation of test data sets	477
12.6 Direct search methods	482
12.7 Linearization	493
12.8 Gradient search methods	494
<u>Chapter 13: Monte Carlo Methods</u>	509
13.1 Some introductory comments	509
13.2 Definite integrals and Monte Carlo methods	510
13.2.1 Probability distributions	510
13.2.2 The evaluation of definite integrals by Monte Carlo methods	512
13.3 An aside on the quality of random distributions	518

PART III: Some computer applications and long
program listings

Chapter 14: Molecular Graphics

Chapter 1: The Generation and Plotting of Molecular Spectra
NMR Spectra Presented as an Example

Chapter 1 : Fourier Transform

APPENDICE

Appendix A Short Glossary of Mathematical and Computing
Terms

Appendix A Short Discussion of QB87 (Microsoft QuickBASIC)

Appendix C: Some Useful Differentia
