<i>Table</i>	<i>Page</i>
Periodic Table	<i>front endpaper</i>
Electronic configuration of elements	
Preface	vii
References to Sources of Chemical Data	ix
1 International System of Units (SI)	1
2 Fundamental Constants	2
3 Conversion Factors	3
Calorie/Joule Conversion	4
4 Properties of the Elements	5
Conductivities, radii, structure	
5 Properties of Inorganic Compounds	14
Structure of binary compounds	
6 Properties of Organic Compounds	38
Thermochemical data, acid dissociation constants, dipole moments	
7 Shapes of Some Molecules and Ions	60
Bond angles, diagrams of shapes	
8 Some Crystal Forms	62
9 Thermochemical Data of Elements and Compounds	64
Enthalpy and free energy of formation, entropy, heat capacity	
10 Latent Heats and Heats of Atomization	89
11 Average Bond Enthalpies	93
12 Bond Lengths	94
13 Electronegativities of the Elements	95

14	First Ionization Enthalpies	96
15	Successive Ionization Enthalpies	98
16	Electron Affinities	100
17	Lattice Enthalpies of Ionic Crystals	101
18	Heats of Neutralization	102
19	Solubility Products	102
20	Stability Constants of Complex Ions	104
21	Standard Electrode Potentials and Redox Equilibria	106
22	Dissociation Constants of Inorganic Acids and Hydrated Metal Ions	112
23	Acid-Base Indicators	114
24	Ionic Properties of Water	114
	Specific conductivity, ionic product	
25	Molar Conductivities of Aqueous Solutions	115
26	Ionic Molar Conductivities at Infinite Dilution	116
27	Dipole Moments for Inorganic Molecules	117
28	Solubility of Gases in Water	118
29	Vapour Pressure and Density of Water and of Mercury	119
30	Densities of Aqueous Solutions	119
	Logarithm and Anti-logarithm Tables	120
	Greek Alphabet	124
	Numerical Prefixes	124
	Index	125
	Elements and Calorie/Joule Conversion Table	<i>back endpaper</i>
