FOREWORD by Professor H. D. Kay, C.B.E., D.Sc., Ph.D., F.R.S.	v
PREFACE	xi
<i>Chapter</i>	
1. INTRODUCTION	1
Atomic Theory	2
The Velocity of Chemical Reaction	11
Thermochemistry	15
Introduction to Cell Physiology and Biochemistry	16
Introduction to Metabolism and Nutrition	24
2. BASIC MATERIALS AND METHODS	31
Glass	31
Glazed Porcelain	32
Fused Silica	33
Metals	33
Plastics and Rubber	34
Apparatus	36
The Cleaning of Apparatus	44
The Support of Laboratory Assemblies	47
3. PURIFICATION	49
Filtration	50
Extraction	59
Distillation	69
Sublimation	91
Crystallization	92
Melting Point Determination	95
Drying	97
Purification and Recovery of Solvents	103
Recovery of Mercury	107
4. ELECTROCHEMISTRY	111
Electrolysis	111
The Hydrogen Ion Exponent, pH	115
Dissociation Constants	117
Modern Concepts of Ionic Theory	118

CONTENTS

<i>Chapter</i>	<i>Page</i>
Modern Definitions of Acids and Bases	119
The Neutralization of Acids by Bases	121
Buffer Solutions	123
The Measurement of pH	126
Electrometric Methods	129
The Preparation of Conductivity Water	145
5. INORGANIC ANALYSIS	148
Some General Ideas on Analysis	148
The Functions of Analytical Tests	149
Qualitative Analysis	150
Quantitative Analysis	157
The Analytical Balance	158
The Torsion Balance	166
Volumetric Apparatus	167
Gravimetric Analysis	183
6. ELEMENTARY ORGANIC ANALYSIS	195
Detection of the Elements	195
Quantitative Estimation of the Elements	201
The Empirical Formulae	214
The Determination of Molecular Weight	215
The Classification and Identification of Organic Compounds	225
Automatic Analysis	238
7. COLORIMETRY	240
Nature of Light and Colour	240
Photometer Methods	250
Measurement of Turbidity	256
Fluorimetry	258
Spectrophotometers	259
Refractometry	268
Polarimetry	271
8. CHROMATOGRAPHY AND ELECTROPHORESIS	278
Chromatography	278
Column Chromatography	280
Paper Chromatography	301
Electrophoresis	313
9. SOME SPECIAL TECHNIQUES	327
Surface Tension	327

CONTENTS

<i>Chapter</i>	<i>Page</i>
High Vacuum Technique	331
The Polarograph	345
Techniques Involving Radioactive Substances ..	351
10. BIOCHEMICAL LABORATORY APPARATUS AND METHODS	361
Ovens and Incubators	361
Cold Baths	369
Water Baths	372
Temperature Measurement and Control Mechanisms	376
Apparatus and Methods for the Preparation of Biological Material	383
Separation Methods	393
11. AN INTRODUCTION TO BIOCHEMICAL COMPOUNDS ..	400
Lipids	400
Derived Lipids	402
Carbohydrates	405
The Disachcarides	409
Polysaccharides	410
General Reactions and Qualitative Tests	412
Proteins	416
Analytical Methods for Biological Material ..	427
Estimation of Reducing Sugars in Biological Material	435
Estimation of Glucose in Biological Material ..	436
Serum or Plasma Alkaline Phosphatase	437
Estimation of Urea	440
12. ENZYMES	443
Mechanisms of Enzyme Action	444
Measurement of Enzyme Activity	453
APPENDICES	471
INDEX	485
