

Contents

- Note to the Student** iii
- 1 Atoms, Molecules, and Ions** 1
- Atoms, gram-atoms, isotopes, molecules, ions, moles, molecular size, elementary stoichiometry, oxidation and reduction, crystal structures, electrolysis, mass spectrometry
- 2 Stoichiometry** 47
- Empirical formulas, balancing equations and stoichiometric calculations, molarity, molality, heat of reaction
- 3 The Gas Laws and the Kinetic Theory** 74
- Avogadro's law, Boyle's law, Charles' law, ideal gas law, kinetic theory, molecular speeds, partial pressures, real gases, molecular beams
- 4 Chemical Equilibrium** 112
- Equilibrium constant and equilibrium composition, K_p versus K_c . For gas reactions: effect of T and P and reactant and product concentration on K , restoration of equilibrium
- 5 Solution Equilibria** 130
- pH, strong acids and bases, weak acids and bases, K_w , K_a , K_b , polyprotic acids, titration, conjugate acid-base pairs, common ion effect and buffers, titration curves, saturated solutions, K_{sp} , common ion effect, complex ion formation, pH effect on solubility
- 6 Chemical Utensils** 172
- A programmed review of Chapters 1-5
- 7 The Periodic Table** 206
- Atomic number, periodic table, common valences of the elements, binary hydrides and oxides

/ 8 Quantum Theory and Atomic Structure 223

Electromagnetic radiation, quantum theory and blackbody radiation, photoelectric effect, Bohr theory for atomic spectra, de Broglie wavelengths, Heisenberg's uncertainty principle, wave mechanics, atomic orbitals

/ 9 Electronic Structure and Atomic Properties 254

Aufbau process and the many-electron atom, ground state electronic configurations of atoms and their ions, ionization energy, electron affinity, isoelectronic atoms and ions, size of ions, electronegativity

10 Oxidation-Reduction and Chemical Properties 284

Oxidation number, oxidizing and reducing agents, balancing oxidation-reduction equations, equivalent weight, oxidation-reduction titrations, properties of the elements

11 Lewis Structures and the VSEPR Method 312

Lewis diagrams, resonance, formal charge, Lewis acids and bases, prediction of shapes of molecules and ions by the valence shell electron pair repulsion (VSEPR) method

12 Diatomic Molecules 337

Molecular orbital theory for homonuclear and heteronuclear diatomic molecules and ions, σ and π bonds, dipole moments

13 Polyatomic Molecules 360

Localized molecular orbitals, hybridization of orbitals, dipole moments and molecular structure, molecular spectroscopy (infrared, Raman and ultraviolet-visible spectroscopy)

14 Bonding in Liquids and Solids 390

Van der Waals interactions, inter- and intramolecular hydrogen bonding, mineral silicates

15 Thermodynamics 411

Heat, work, first law of thermodynamics, enthalpy of formation and reaction, Hess' law, bond energy, heat capacity

16 Entropy, Free Energy, and Chemical Reactions 437

Entropy, free energy, second law of thermodynamics spontaneity, equilibrium, activity

17 Free Energy and Equilibrium 450

Equilibrium constant, ΔG and K , free energy of formation

18 Equilibria Involving Liquids and Solids 466

Phase transitions, Raoult's law, colligative properties (lowering of vapor pressure, depression of freezing point, elevation of boiling point, osmotic pressure)

19 Oxidation-Reduction Equilibria and Electrochemistry 482

Oxidation, reduction, half-reactions, Nernst equation, electrical work

20 Coordination Compounds 501

Coordination number, oxidation state, nomenclature, geometrical and optical isomers, chelates, crystal field theory

21 The Special Role of Carbon 527

Nomenclature, bonding, organic reactions, geometrical isomers, stereoisomers, amino acids, polypeptides, enzyme inhibition, drugs

22 Chemical Kinetics 561

Rate equations, activation energy, mechanisms, collision theory, activated state theory, potential energy diagrams, catalysis

23 Nuclear Chemistry 587

Isotopes, isotones, structure of the nucleus, nuclear radii, natural radioactivity (α , β^- , β^+ and γ decay), half-life, radiodating, transuranium elements, fission and fusion reactions

Appendix 1 Examinations 605**Appendix 2 Mathematical Necessities and Devices 639****Appendix 3 Reference Tables for Units; Conversion Factors 646**
