

Contents

CHAPTER	<i>Page</i>
1 Introduction	1
2 Units of Measurement	3
3 Atomic and Molecular Weights	13
4 Formulas and Percentage Composition	26
5 Methods of Balancing Equations	34
6 Gas Laws	46
7 Stoichiometry	67
8 Solids	82
9 Expressing Concentrations of Solutions	91
10 Colligative Properties of Solutions	101
11 Thermal Changes in Chemical Processes	113
12 Titrations	121
13 Rates of Chemical Reactions	132
14 Molecular Equilibrium	144
15 Ionic Equilibrium	155
16 Equilibrium in Saturated Solutions	172
17 Hydrolysis and Complex Ion Formation	189
18 Nuclear Changes	200
19 Electrochemistry	210

APPENDIX

I	Mathematics Review	223
II	Exponential Numbers	228
III	Logarithms	233
IV	Significant Figures	238
V	Experimental Error	244
VI	Vapor Pressure of Water	246
VII	Ionization Constants for Acids and Bases	247
VIII	Solubility Product Constants	248
IX	Dissociation Constants for a Few Complex Ions	249
X	Table of Logarithms	251
XI	Answers to Problems	254
	Index	271
