## CHAPTER

1	Introduction	1
2	Units of Measurement	3
3	Atomic and Molecular Weights	13
4	Formulas and Percentage Composition	25
5	Methods of Balancing Equations	33
<del>6</del>	Gas Laws	45
7	Stoichiometry	67
<del>8</del>	Solids	81
✓9	Expressing Concentrations of Solutions	90
✓10	Colligative Properties of Solutions	101
11	Thermal Changes in Chemical Processes	113
12	Titration	123
✓13	Rates of Chemical Reactions	133
✓14	Molecular Equilibrium	144
<del>15</del>	Ionic Equilibrium	157
16	Equilibrium in Saturated Solutions	175
17	Hydrolysis and Complex Ion Formation	191
× 18	Nuclear Changes	202
✓19	Electrochemistry	215
20	Chemical Thermodynamics	227

**APPENDIX**

I	Mathematics Review	243
II	Exponential Numbers	248
× III	Logarithms	253
IV	Significant Figures	258
V	Experimental Error	263
VI	Vapor Pressure of Water	265
VII	Ionization Constants for Acids and Bases	266
VIII	Solubility Product Constants	267
IX	Dissociation Constants for a Few Complex Ions	268
X	Table of Logarithms	269
XI	Answers to Problems	272
	<b>INDEX</b>	<b>289</b>
