chapter	Page
1. THE ORIGINS OF CHEMISTRY	13
<i>The Ancient Philosophers and Matter, p. 13—The Alchemists, p. 14—The Sceptical Chymist, p. 19—The Secret of Combustion, p. 21—The Scientific Atomic Theory, p. 25—Formulas: The Chemist's Shorthand, p. 27—Atoms and Molecules, p. 29.</i>	
2. CHEMISTRY AS A SCIENCE	32
<i>The Foundation of the Royal Institution, p. 32—From the Philosophers' Stone to the Catalyst, p. 36—Three German Chemists, p. 38—Chemistry in the Service of Agriculture, p. 42—Liebig and Hofmann, Giessen and London, p. 44—A Young Chemist produces the First Coal-tar Dye, p. 46</i>	
3. THE GROWTH OF THE COAL-TAR DYE INDUSTRY	50
<i>British Beginnings, p. 50—William Henry Perkin and his Achievement, p. 55—Fuchsine, the First Aniline Red, p. 56—Alizarin, the Dye of the Madder Root, p. 59—The Rise of the German Dyestuff Industry, p. 60—Indigo, the King of Dyes, p. 64—The Economic Importance of Coal-tar Dyes in 1913, p. 66—Migrations and Transformations of the Dyestuff Industry, p. 67—The Causes of Colour, p. 69—More about Coal-tar, p. 71</i>	
4. PRODUCTION OF MINERAL ACIDS AND ALKALIS	75
<i>The Sulphuric-acid Industry, p. 75—The Alkali Industry, p. 79—The Conquest of Nitrogen, p. 83—Georg Lunge, the G.O.M. of Chemical Technology, p. 90—Alkali-chloride Electrolysis, p. 91</i>	
5. NEW WEAPONS IN THE FIGHT AGAINST DISEASES AND EPIDEMICS, PESTS, AND PARASITES	98
<i>From Azo Dyes to Sulphonamides, p. 98—D.D.T. destroys Harmful Insects, p. 100—The Discovery of Penicillin, p. 103—Tranquilizers, a New Group of Drugs, p. 106—Vitamins, p. 109</i>	
6. ON ODORIFEROUS SUBSTANCES	112
<i>Nature's Delightful Gifts, p. 112—Odoriferous Substances yield Perfume and Aroma, p. 115—Chemistry in the Service of Perfumery, p. 117</i>	
7. ARTIFICIAL FIBRES AND NEW SUBSTANCES FROM CELLULOSE	120
<i>From Silkworm to Artificial Silk, p. 120—From Gun-cotton to Celluloid, p. 125—The Secret of Cellulose, p. 127</i>	

chapter	page
8. FULLY SYNTHETIC PLASTICS	131
<i>Bakeland develops Thermohardening Resins, p. 131—Polymerization controlled by Man, p. 134</i>	
9. THE SUN OF CHEMISTRY MOVES WESTWARD	147
<i>Rise and Decline of I.G. Farben, p. 147—The Spirit of the New Chemical Industry in the U.S.A., p. 148—Some Chemical Masterpieces, p. 154</i>	
10. THE DISCOVERY OF ALUMINIUM	166
<i>Silver from Clay?, p. 167—The Peculiarity of Alumina, p. 168—Two Young Men solve a Problem, p. 169—The First Aluminium Plant in Switzerland, p. 171—Strength is added to Aluminium, p. 172—The Raw Materials, p. 174—The Manufacture of Alumina, p. 175—The Flux Electrolysis of Alumina, p. 176</i>	
11. GLASS	177
<i>What is Glass?, p. 178—The Beginnings of the Glass Industry, p. 179—A Chemist finds a Glassworks, p. 180—America develops New Kinds of Glass, p. 183—Glass as a Thermoplastic, p. 187</i>	
12. THE MYSTERY OF THE ATOM	189
<i>The Discovery of the Electron, p. 189—A Miniature Solar System, p. 191—The Atomic Nucleus, p. 195—Isotopes, p. 196—The Splitting of the Uranium Atom, p. 197—Matter in the Light of Modern Physics, p. 199</i>	
APPENDIX : THE DISTRIBUTION OF THE ELEMENTS	203
GLOSSARY OF TECHNICAL TERMS	205
INDEX OF NAMES	211
INDEX OF SUBJECTS	213
