CHAPTER

1. The Sciences — Chemistry	1	14. Radiant Energy and Some of Its Applications; <u>Crystal Structure</u>	128
2. Matter and Energy	7	15. Atomic Nuclei	140
3. Physical Measurement	15	16. The Periodic Law	150
4. The Particle Theory of Matter	26	17. Atomic Structure; Chemical Bonds	158
5. Gases and the Kinetic-Molecular Theory	33	18. Electron Configurations and the Periodic Law	168
6. The Gas Laws	43	19. Water	184
7. Molecular Attraction; Changes of State	54	20. Some Important Types of Chemical Change	195
8. Physical Properties of Liquids and Solids	65	21. Oxygen and the Oxides	206
9. Solutions	74	22. Oxidation and Reduction	220
10. Chemical Substances and Chemical Change	83	23. Acids and Bases; Neutralization	230
11. Molecular and Atomic Weights	95	24. Chemical Equilibria	240
12. Electrons and Ions	104	25. Salts and Their Reactions with Water	252
13. Chemical Formulas; Equations; and Calculations	116	26. Properties of Solutions	261
		27. Hydrogen; Equivalent Weights	272
		28. The Atmosphere; the Inert Gases	284
		29. The Halogens	296
		30. Compounds of the Halogens	306
		31. The Sulfur Family	317
		32. Reaction Rates; the Law of Mass Action	329

33. Nitrogen	341	45. Sulfides, Sulfitcs, and Sulfates of the Metals	480
34. Phosphorus, Arsenic, Antimony, and Bismuth	353	46. Silicates and Borates of the Metals	489
35. Carbon, Silicon, Boron, and Titanium	368	47. Higher Oxidation States of the Metals	500
36. Fuels and Combustion	381	48. Mineral Chemistry	508
37. Ionic Equilibria	393	49. The Colloidal State	517
38. The Metals, I	404	50. Photochemistry	529
39. The Metals, II	415	51. Radiochemistry	539
40. Electrochemistry	431	52. Organic Chemistry: the Hydrocarbons	555
41. Complex Ions	442	53. Derivatives of the Hydrocarbons	567
42. Oxides and Hydroxides of the Metals	450	54. Organic Compounds of More Complex Structure	576
43. Carbonates and Bicarbonates of the Metals	462	Additional Readings	595
44. Halides of the Metals	473	Picture Credits	601
		Index	603
