

**PART ONE  
STRUCTURE**

<b>Chapter 1</b>	<b>Introduction</b>	<b>1</b>
1.1	The Roots of Chemical Science <i>The Greek Philosophers   The Alchemists</i>	2
1.2	The Phlogiston Theory	4
1.3	The Discovery of Oxygen	5
1.4	Scientific Method	6
1.5	Scientific Measurements <i>Length   Area and Volume   Mass   Density   Temperature</i>	8
1.6	Significant Figures	14
1.7	Unit Factors in Calculations	18
<b>Chapter 2</b>	<b>Matter</b>	<b>24</b>
2.1	Law of Constant Composition	25
2.2	Mixtures and Pure Substances <i>Separation of Mixtures</i>	25
2.3	Compounds and Elements	28
2.4	Law of Multiple Proportions	29
2.5	The Atomic Theory	30
2.6	Symbols for the Elements	30
2.7	Atomic Masses (Weights) <i>Law of Combining Volumes of Gases   Avogadro's Hypothesis   Molecular Masses</i>	32
2.8	Molecular Formulas <i>Elemental Analysis</i>	36
2.9	Names of Compounds	39
<b>Chapter 3</b>	<b>Chemical Equations and Stoichiometry</b>	<b>43</b>
3.1	Chemical Equations	43
3.2	Stoichiometry	44
3.3	The Mole	45
3.4	Stoichiometric Calculations <i>Mole Relationships   Relationships Based on Equations</i>	46
3.5	Reactions in Solution <i>Concentration   Solution Stoichiometry   Titrations</i>	55
<b>Chapter 4</b>	<b>Energy</b>	<b>64</b>
4.1	Mechanical Energy <i>Kinetic and Potential Energy   State Functions</i>	64
4.2	Heat	66

---

# CONTENTS

4.3	Heat, Work, and Energy Transfer <i>Temperature</i>	68
4.4	The First Law of Thermodynamics	71
4.5	Calorimetry	72
4.6	Enthalpy <i>Enthalpy and States of Matter   Standard Enthalpy Change   Hess's Law   Standard Enthalpy of Formation</i>	73
4.7	Radiant Energy <i>The Wave Nature of Radiant Energy   Diffraction of Radiation   The Particle Nature of Radiant Energy</i>	82
4.8	Electrical Energy	90
4.9	Energy Resources and Utilization	90
<b>Chapter 5</b>	<b>Gases</b>	<b>97</b>
5.1	The Bulk Properties of Gases	97
5.2	Atmospheric Pressure	98
5.3	The Pressure-Volume Relationship of Gases	100
5.4	The Temperature-Volume Relationship of Gases	102
5.5	Kinetic Energy of Gas Molecules	105
5.6	The Ideal Gas Law <i>Molar Volume   Gas Density   Molar Masses   Gas Stoichiometry   Partial Pressures</i>	106
5.7	The Kinetic-Molecular Theory <i>Molecular Velocities   Mean Free Path   Effusion of Gases</i>	116
5.8	Real Gases	121
<b>Chapter 6</b>	<b>Atomic Structure</b>	<b>127</b>
6.1	The Electron	128
6.2	Protons and Neutrons	131
6.3	Radioactivity	132
6.4	The Nuclear Atom	132
6.5	X Rays and Atomic Number	133
6.6	The Mass Spectrometer	134
6.7	Electron Structure of the Atom <i>Emission Spectra   The Hydrogen Spectrum</i>	137
6.8	The Bohr Model for the Hydrogen Atom	140
6.9	Matter Waves	145
6.10	The Uncertainty Principle	147
6.11	Wave Mechanics	148
6.12	The Quantum Mechanical Hydrogen Atom	149
6.13	Quantum Numbers	151
6.14	Orbital Energies	155
6.15	The Spin Quantum Number	156

6.16	Multielectron Atoms	157
6.17	Electron Configurations of the Elements	158
6.18	Scientific Models	162
<b>Chapter 7</b>	<b>Periodic Relationships of the Elements</b>	<b>167</b>
7.1	Mendeleev's Periodic Table	167
7.2	The Periodic Table Today	171
7.3	The Periodic Variation of Properties	173
7.4	Atomic Size	174
7.5	Ionization Energy	178
7.6	Electron Affinity	183
7.7	Electronegativity	184
7.8	Metals and Nonmetals	186
7.9	The Position of Hydrogen in the Periodic Table	187
<b>Chapter 8</b>	<b>The Chemical Bond</b>	<b>191</b>
8.1	The Ionic Bond	191
8.2	The Covalent Bond	195
	<i>Lewis Structures—The Octet Rule   Inadequacies of the Octet Rule and Lewis Structures   Resonance</i>	
8.3	Molecular Geometry—Electron-Pair Repulsion	202
8.4	Oxidation-Reduction	207
	<i>Oxidation State   Oxidizing Agents and Reducing Agents   Balancing Oxidation-Reduction Equations</i>	
8.5	Nomenclature	212
	<i>Binary Compounds   Polyatomic Anions   Acids</i>	
<b>Chapter 9</b>	<b>Theories of the Covalent Bond</b>	<b>220</b>
9.1	The Valence Bond Model	220
	<i>Bond Polarity   Hybrid Orbitals   Multiple Bonds   Resonance</i>	
9.2	The Molecular Orbital Model	236
	<i>First Period Homonuclear Diatomic Molecules   Second Period Homonuclear Diatomic Molecules   Heteronuclear Diatomic Molecules</i>	
9.3	The Metallic Bond	246
9.4	Average Bond Energies	249
<b>Chapter 10</b>	<b>Molecular Structure and the States of Matter: Liquids</b>	<b>255</b>
10.1	Gases, Liquids, and Solids	255
10.2	Polarities of Molecules	256
	<i>Polar Covalent Molecules   Hydrogen Bonds   London Forces</i>	
10.3	Liquids	265

*Intermolecular Attractions in Liquids | Vapor Pressure | Le Chatelier's Principle | Enthalpy of Vaporization | Freezing of Liquids*

- 10.4 Phase Changes 279  
*Phase Diagrams*

**Chapter 11 The Solid State 289**

- 11.1 Crystal Structure 289  
*Crystal Systems | Close-Packed Structures | Ionic Crystal Structures | Solid Covalent Compounds | Network Covalent Crystals | Properties of Crystalline Solids*
- 11.2 Liquid Crystals 304
- 11.3 Crystal Lattice Defects 305

**Chapter 12 Properties of Mixtures: Solutions and Colloids 310**

- 12.1 Gaseous Solutions 310  
*Solutions of Gases in Liquids*
- 12.2 Solutions of Solids in Liquids 313  
*The Solution Process | Enthalpy of Solution | Solubility | Structure and Solubility*
- 12.3 Expressions of Concentration 322  
*Mass Percent | Parts per Million and Parts per Billion | Mole Fraction | Molality | Molarity*
- 12.4 Solution Stoichiometry 329
- 12.5 Properties of Solutions of Solids in Liquids 330  
*Vapor Pressure | Boiling Point Elevation | Freezing Point Depression | Osmotic Pressure | Molar Mass Determination | Solutions of Ionic Solutes in Liquids*
- 12.6 Solutions of Liquids in Liquids 340  
*Vapor Pressure | Distillation*
- 12.7 Solid Solutions 343
- 12.8 Colloidal Suspensions 344

**PART TWO  
DYNAMICS**

**Chapter 13 Structure and Chemical Reactivity 355**

- 13.1 Direct Combination of Elements 355  
*The Formation of Ionic Compounds | The Formation of Covalent Compounds | Decomposition Reactions*
- 13.2 Ion-Combining Reactions 360
- 13.3 Oxidation-Reduction Reactions 362

13.4	Acids and Bases	363
	<i>Arrhenius Definition of Acids and Bases   Brønsted-Lowry Definition of Acids and Bases   Lewis Definition of Acids and Bases   Strengths of Acids and Bases   Aqueous Solutions of Salts   Oxides   Amphoterism</i>	
13.5	Reactivity Trends	379
	<i>Hydrides   Chlorides</i>	
<b>Chapter 14</b>	<b>Chemical Kinetics</b>	<b>386</b>
14.1	Rates of Reactions	387
14.2	Collision Theory	390
14.3	Concentration Effects	392
	<i>Rate Equations   Integrated Rate Equations   Half-Life</i>	
14.4	Temperature Effects	405
14.5	Transition State Theory	408
14.6	Reaction Mechanism	410
14.7	Catalysis	417
<b>Chapter 15</b>	<b>Chemical Equilibrium</b>	<b>428</b>
15.1	Concentration Effects in Equilibria	428
	<i>Equilibrium Constant Expressions   Kinetics and Equilibrium   Equilibrium Constants</i>	
15.2	Equilibrium Calculations	435
15.3	Applications of Le Chatelier's Principle	441
	<i>Effect of Concentration Changes   Effect of Pressure Changes   Effect of Temperature Changes   Effect of Catalysts   The Haber Process</i>	
15.4	Heterogeneous Equilibria	451
<b>Chapter 16</b>	<b>Ionic Equilibria: Aqueous Acids and Bases</b>	<b>457</b>
16.1	Dissociation Constant Expressions	457
16.2	The Dissociation of Water	460
16.3	The pH Scale	462
	<i>pOH and <math>pK_w</math>   <math>pK_a</math></i>	
16.4	Polyprotic Acids	466
16.5	Weak Bases	467
16.6	Conjugate Acid-Base Relationships	469
16.7	Aqueous Solutions of Salts	470
16.8	Common Ion Effect	473
16.9	Buffers	476
16.10	Acid-Base Titrations	481
16.11	Indicators	486
16.12	Summary of Acid-Base Equilibria	487

<b>Chapter 17</b>	<b>Ionic Equilibria: Solubility and Complex Ions</b>	<b>496</b>
17.1	Solubility Equilibria <i>Solubility Product Constants   <math>K_{sp}</math> and Precipitation   Common Ions and Solubility</i>	496
17.2	Complex Ion Equilibria	505
17.3	Qualitative Analysis	509
<b>Chapter 18</b>	<b>Chemical Thermodynamics</b>	<b>515</b>
18.1	The First Law Revisited	515
18.2	Reversible and Irreversible Processes	517
18.3	Exothermic and Endothermic Processes	519
18.4	Spontaneous Processes	519
18.5	Entropy <i>Entropy and Reversibility   Mathematical Definition of Entropy</i>	520
18.6	Free Energy	528
18.7	Free Energy and Equilibrium <i>Free Energy Change under Nonstandard Conditions</i>	532
18.8	Experimental Determination of Thermodynamic Functions	538
18.9	The Third Law of Thermodynamics	539
18.10	Standard Free Energies of Formation	541
18.11	The Second Law and Human Activity	543
<b>Chapter 19</b>	<b>The Interconversion of Chemical and Electrical Energy</b>	<b>549</b>
19.1	Voltaic Cells	550
19.2	Balancing Oxidation-Reduction Equations	554
19.3	Cell Potentials	558
19.4	Electrode Potentials	561
19.5	Free Energy Changes in Voltaic Cells	568
19.6	Cell Potentials and Equilibrium Constants	569
19.7	Concentration Effects in Voltaic Cells <i>Measurement of Ionic Concentrations</i>	570
19.8	Commercial Voltaic Cells <i>Fuel Cells</i>	576
19.9	Electrolysis <i>Quantitative Electrolysis   Commercial Uses of Electrolysis</i>	581
<b>Chapter 20</b>	<b>The Interactions between Radiant Energy and Matter</b>	<b>595</b>
20.1	The Absorption of Radiant Energy	597
20.2	Absorption Spectra <i>Rotational Spectra   Vibrational Spectra   Electronic Spectra</i>	598

20.3	Fluorescence and Phosphorescence	607
20.4	Photochemical Reactions <i>Photography   Photosynthesis   Photoelectrolysis   Other Photochemical Reactions</i>	610
<b>Chapter 21</b>	<b>Atmospheric Chemistry</b>	<b>618</b>
21.1	Atmospheric Composition	618
21.2	Atmospheric Density	620
21.3	Atmospheric Temperatures	622
21.4	Atmospheric Ionization	625
21.5	Atmospheric Pollution <i>Stratospheric Pollution   Tropospheric Pollution</i>	626
21.6	Control of Atmospheric Pollution	635
<b>Chapter 22</b>	<b>Chemistry of the Nonmetals. I</b>	<b>640</b>
22.1	Hydrogen <i>Preparation   Reactivity</i>	640
22.2	Group 8A, The Noble Gases <i>Occurrence   Reactivity</i>	643
22.3	Group 7A, The Halogens <i>Preparation   Reactivity   Metal Halides, <math>MX_n</math>   Hydrogen Halides, <math>HX</math>   Nonmetal Halides, <math>AX_n</math>   Interhalogen Compounds, <math>XX'_n</math>   Halogen Oxides, <math>XO_n</math>   Oxohalogen Acids, <math>HXO_n</math></i>	646
22.4	Group 6A, The Chalcogens <i>Occurrence and Preparation   Reactivity   Metal Chalcogenides, <math>MA_n</math>   Hydrogen Chalcogenides, <math>H_2A_n</math>   Chalcogen Oxides, <math>AO_2</math> and <math>AO_3</math>   Oxochalcogen Acids, <math>H_2AO_3</math> and <math>H_2AO_4</math></i>	657
<b>Chapter 23</b>	<b>Chemistry of the Nonmetals. II</b>	<b>672</b>
23.1	Group 5A, The Nitrogen Family <i>Occurrence and Preparation   Structure and Reactivity   Nitrides and Phosphides, <math>M_3Q</math>   Hydrides, <math>QH_3</math>   Halides, <math>QX_3</math> and <math>QX_5</math>   Oxides   Oxoacids</i>	672
23.2	Group 4A, Carbon and Silicon <i>Occurrence, Preparation and Reactivity   Carbides and Silicides   Oxides and Oxoacids   Sulfur, Halogen, and Nitrogen Compounds   Hydrides</i>	687
28.3	Group 3A, Boron <i>Borides   Halides   Boric Acid   Hydrides</i>	707
<b>Chapter 24</b>	<b>Geochemistry and Metallurgy</b>	<b>714</b>
24.1	Geochemistry <i>Minerals   Rocks</i>	714

24.2	Metallurgy	724
	<i>Preliminary Treatment of Ores   Reduction of Ores   Refining Metals</i>	
24.3	Corrosion	736

## Chapter 25 Chemistry of the Metals **742**

25.1	Physical Properties	743
25.2	Properties of Cations	748
25.3	Representative Metals	751
	<i>Group 1A Metals, the Alkali Metals   Group 2A Metals, the Alkaline Earth Metals   Group 3A Metals   Group 4A Metals</i>	
25.4	Transition Metals	760
25.5	Inner Transition Metals	763
25.6	Important Transition Metals	764
	<i>Chromium   Manganese   Iron   The Coinage Metals—Copper, Silver and Gold   Zinc, Cadmium and Mercury</i>	

## Chapter 26 Coordination Complexes **773**

26.1	The Nature of Coordination Complexes	773
	<i>Ligands   Nomenclature   Coordination Number and Geometry   Isomerism in Coordination Complexes   Color of Coordination Complexes</i>	
26.2	Bonding in Coordination Complexes	781
	<i>Valence Bond Theory   Crystal Field Theory   Ligand Field Theory</i>	
26.3	Reactions of Coordination Complexes	790

## Chapter 27 Nuclear Chemistry **797**

27.1	The Nature of Radioactive Radiation	797
27.2	Detection of Radioactive Emissions	798
	<i>Radioactive Tracers</i>	
27.3	Natural Radioactive Decay Series	801
27.4	Kinetics of Radioactive Disintegration	804
	<i>Dating</i>	
27.5	Nuclear Structure and Stability	808
	<i>Neutron/Proton Ratio   Binding Energies   Nuclear Structure   Nuclear Emissions</i>	
27.6	Nuclear Transformations	815
	<i>Particle Accelerators   Synthetic Elements</i>	
27.7	Nuclear Fission	820
	<i>The Fission Reaction   Nuclear Reactors</i>	
27.8	Nuclear Fusion	825
27.9	Biological Effects of Radiation	826

## APPENDIXES

<b>A</b>	<b>Review of Mathematics</b>	<b>831</b>
A.1	Algebraic Operations <i>Quadratic Equations</i>	831
A.2	Exponential Numbers and Scientific Notation <i>Exponential Arithmetic</i>	832
A.3	Logarithms <i>Operations with Logarithms   Natural Logarithms</i>	835
A.4	Electronic Calculators	839
A.5	Graphs	840
<b>B</b>	<b>SI Units</b>	<b>844</b>
<b>C</b>	<b>Physical Constants</b>	<b>845</b>
<b>D</b>	<b>Derivation of Some Equations</b>	<b>846</b>
D.1	Kinetic-Molecular Theory and the Ideal Gas Law	846
D.2	Electron Charge-to-Mass Ratio	847
D.3	The Mass-to-Charge Ratio in the Mass Spectrometer	848
D.4	The Bohr Equation for the Electron Energies in the Hydrogen Atom	849
D.5	Integrated Rate Equations <i>Zero-Order Equation   First-Order Equation   Second-Order Equation</i>	851
